Fri., Feb. 22 (High, Low, Close): STOCK EXCHANGE CLOSED.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Actual trade and industrial developments are quite generally favorable, better weather conditions and the easing of the railroad blockades being largely instrumental in this direction. Jobbing trade in spring and summer fabrics has expanded at the east, at leading southwestern centers, and at prominent southern markets. Better reports also come from the northwest, where the railroads are winning out of the snow blockades, and on the north Pacific coast, where the car congestion is less acute and preparations for spring trade are noted. There is also a better tone to advices from the south Atlantic states, which suffered a reduction of crop yields last fall, and southern advices, as a whole, reflect the selling of an enormous, if not indeed record, cotton crop at excellent prices. A very large acreage in cotton seems certain the coming spring, the only drawback being excessively dry weather in the southern half of the cotton belt, particularly Florida and Texas. Winter-wheat conditions are not yet clearly defined. There is no snow covering to speak of, but damage reports are no more numerous than usual and the weather is quite mild. Texas, however, reports great damage to wheat from green bugs, and some wheat land is being plowed up for cotton and corn. The leading industries are still busily employed. Pig iron and coke are easier, but finished iron and steel products are very active and specifications are coming in freely. Cotton-goods manufacturing was never so active, and the only complaint is of slow deliveries. Coal, coke and related industries are busy, and the jewelry manufacturing and rubber goods trade are unusually active. Money tends to ease, as a whole, being very plentiful in the southwest, where commercial paper and short-time notes are being bought freely. Collections are still irregular but tend to slowness, as retail trade in winter goods is largely over and spring business has hardly begun. Retail stocks of winter goods have been well reduced, however. Bank clearings show a gain over last week—a holiday period—but a small decrease from last year. The disposition is to regard February distribution as fully equal to or in excess of last year, and expectations are general of an early opening of a record spring trade.

There are, of course, some flaws in the situation. Building, as a whole, does not show signs of equaling the record volume of 1906. The numerous published announcements by leading railroads of the curtailment or postponement of extensive improvements, owing to high cost of labor and materials or to the high rates demanded on new issues of securities, exert some influence upon sentiment as regards future commitments in materials likely to be used in railway extension. Based upon these views, also, there is a disposition to believe that the crest of the present prosperity movement has been seen. It is, however, worth recalling that predictions somewhat similar to the above were made at this date a year ago, but the events of 1906, as a whole, certainly did not bear them out. Many close observers, however, believe that a small reduction in the volume of the country's general traffic would be beneficial by allowing the railroads to catch up with their business and thus facilitate the movement of unsold crops of 1906 to market, and also remove the tendency to speculation induced by uncertainties as to deliveries of goods bought. These problems are, however, matters for future solution. One thing, indeed, is certain, so far as orders booked and goods sold are concerned—the first half of 1907 is absolutely secure. Beyond this the course of events will be largely shaped by the prospects and outturn of the crops of the year.

A feature possibly affecting the country's foreign trade not yet receiving full attention is the reported buying of grain here for export to Russia. This buying by itself is not important, but the incident may have vast significance if Russia ceases to export grain, throwing the burden of supplying Europe upon this country, Canada and Argentina. Prices of grain have not responded as much as hoped, but this is explained by the fact that country elevators are reported full of wheat and corn, which is likely to move when the car congestion eases up and water traffic begins on the lakes.

Trade in eastern dry-goods markets is active in all lines, but cotton goods still display most strength and eager demand. The only complaint is of backward deliveries. At first hands print cloths have again been advanced. Cotton yarns are very firm. With jobbers, cotton goods lead, domestic and printed goods being eagerly bought wherever obtainable. In other lines demand is also good. Silks, woolen dress goods, knit fabrics and, to a lesser degree, woolen men's-wear goods are all in good demand. The linen trade is reported well sold up. Spring trade in millinery has started out actively. Raw wool is quiet but very firm, with small stocks restricting trade. Three-eighths and quarter bloods have sold better on good reports from the heavy-goods market. Foreign wools are arriving freely, but receipts are still below expectations, owing to transportation difficulties at the west. Visible supplies are practically nil, and wool goes direct from the sheep to the mill.

Pig-iron markets are quiet and weaker. Late in the week sales for second-half delivery were reported as having been made at a reduction of 25 cents per ton, valley furnaces, but southern interests appear to be holding firmly to $18.50 for No. 2 for delivery in the second half. Some low phosphorus pig has been sold to an important interest at prices somewhat under those recently ruling. Quotations in the British markets have also receded. Consumers of steel-making iron appear indisposed to come into the market until further concessions are made. Steel is in better supply. Finished lines furnish excellent reports. Demand for deliveries of bars and plates is especially marked, while specifications on structural material are of goodly proportions and new business is fair. New orders for steel rails make up a comparatively large tonnage, considering the heavy volume heretofore placed, sales for the week aggregating about 40,000 tons. Cast-iron pipe continues in heavy demand. While some kinds of old material show recessions, the general market is firmer. Coke is somewhat easier, recent favorable weather having permitted of increased outputs, and the better supply of cars has facilitated deliveries. Coal is in good demand, with supplies at the west more liberal. Copper is quiet but firm, the feature being the insistent request for deliveries.

The New York stock market is dull and heavy, despite some covering of shorts at the end of the week, due to the closing of the Stock Exchange on both Friday and Saturday. Fears for the Aldrich bill, and allegations that something unfavorable may develop when the Union Pacific investigation is resumed by the Interstate Commerce Commission on Monday, were effectively used in connection with bearish attacks on different parts of the list, and resulted in moderate declines all around. Another issue of $60,000,000 Pennsylvania Railroad notes, though at first unfavorably construed, was later on better regarded, as the bulk of the money is to pay off old obligations, and it was further announced that the company will institute no new expensive work. The placing of a $30,000,000 issue in Paris by the New Haven road was considered important in its bearings upon exchange, which continues heavy, demand sterling being 4.84.40, which normally is the gold-import point, although bankers seem loath to take specie from London.

Larger domestic movement and freer offerings have more than offset the bullish news afforded by reported heavy buying of wheat, mostly macaroni, for shipment to Russia. Some bidding for Argentine wheat for delivery at Black sea ports is also reported, but there is some skepticism regarding this Russian demand, though the situation in that country is reported by European advices to be very bad. The fact is that the Russian situation is still very much of a puzzle. In 1891, when the Russian crops failed, exports were forbidden. This year nothing of this sort has been ordered. In 1891 no Russian imports from the United States were recorded. So far, something like 1,000,000 bushels is claimed to have been bought here for Russian account, most of it to go by way of Hamburg. Wheat prices have been relatively weakest at the interior, where prices are 1 to 2 cents off from a week ago Minneapolis prices are 5 cents lower than the high point touched two weeks ago, while cash wheat at New York is 3 cents lower, and Chicago is 2½ cents lower. At the close the tone of American markets was somewhat stronger, and liquidation following the recent rise is thought to be over, favoring another upward swing, providing receipts at the interior are not too heavy. Corn was quite strong throughout the week, and oats are also little changed. Hog products generally are strong, despite larger hog receipts, but lard is lower.

It has been a narrow, professional market for cotton, with price changes small and the continued immense receipts the feature, making for weakness in the old-crop months. The old-crop months, except that of March, show a net decrease of 12 points on the week, but the new-crop deliveries are little changed. The strength of the next crop and the ease in the near deliveries are, indeed, the only features, aside from the continued large crop movement, which make 13,000,000-bale estimates look small.

The leather trade is only fairly active as regards new sales, but shipments on orders are still large. Patent-leather manufacturers are still very much behind in deliveries. Eastern shoe shipments for the week are larger, and show a gain over a year ago for the first time this year. For the season, however, they are 9.7 per cent. behind 1906.

Business failures for the week ending February 20 number 177, against 204 last week, 186 in the like week of 1906, 220 in 1905, 200 in 1904 and 185 in 1903.

Wheat, including flour, exports from the United States and Canada for the five days ending February 20 aggregated 2,932,491 bushels, against 2,500,139 bushels last week, 2,357,068 bushels this week last year, 923,022 bushels in 1905 and 3,609,435 bushels in 1902. For the past thirty-four weeks of the fiscal year the exports are 118,816,105 bushels, against 92,278,196 bushels in 1905-06, 42,509,480 bushels in 1904-05 and 178,195,104 bushels in 1901-02. Corn exports for the week are 1,688,638 bushels, against 1,997,720 bushels last week, 4,403,007 bushels a year ago and 3,827,081 bushels in 1905. For the fiscal year to date the exports are 39,323,155 bushels, against 80,655,655 bushels in 1905-06 and 42,201,952 bushels in 1904-05.

IN CANADA.

With milder weather and good roads Canadian trade has expanded both at retail and wholesale. Winter goods are being well cleaned up at retail, shipments of spring goods are large, and a much larger trade than a year ago is in prospect. Building promises to be active throughout Canada, and material is active and strong. The Canadian railroads are winning out of the snow blockades and freight is moving better. Canadian trade with Asia is increasing. Montreal reports manufacturers still behind on deliveries, and labor is scarce. Leather is not especially active. Ontario retailers are well cleaned out of winter goods. Building is likely to be active. In the northwest, country roads are better and the railroads are moving freight more freely, but grain in farmers' hands will not move freely until spring, so that collections are apt to be slow until then. Cold weather on the Pacific coast has affected trade somewhat. Shipping is very active. Failures for the week number 13, as against 29 last week and 32 in this week a year ago.

TRADE REPORTS.

The dry goods business of New York is fairly active. Transactions in cotton goods are large and silks continue in fair request at increasing prices, but raw silk does not improve. Worsteds for men's wear are in good demand. Conditions in the clothing trade are satisfactory and collections are up to the average. Trade in millinery at wholesale is good. Artificial flowers and feathers are selling well. Wholesale men's furnishings are very active. Commission houses are sold up on spring goods and jobbers have as many orders as they can fill. Collections in some cases are slow and the opinion prevails that retailers in the country are carrying too heavy stocks. Little is being done in rags and shoddy, but holders are not offering concessions. Wholesale grocers report satisfactory business, with prices well maintained. Retailers find trade brisk. Orders for Easter novelties in confectionery are better, prices are firm and collections fair. Flour shows strength, dealers buying more freely because of the tone of the wheat market. Some cheese was offered for export and butter rose a cent. Eggs are in better demand at a fractional advance in price. Supplies of poultry are up to the average and the market is fairly steady. Conditions in the tin and enameled ware trades show considerable improvement over the opening months of last year, and despite a pronounced advance in the price of some articles factories are busy. Trade in woodenware is unusually brisk and prices are up 10 to 30 per cent. The metal market is quieter but firm. Pig iron is in less demand, but steel merchants are well supplied with orders. Business in automobiles is steadily increasing, the demand for vehicles for commercial purposes being very large. Trade in hard fibre cordage is heavier than usual at this season, and prices very firm. Demand for coal is good at steady prices. Collections in the furniture trade are slow, and business is rather quiet. While quotations are being asked for in the jewelry trade, there is not much actual buying. Real estate is fairly active. The increased number of plans filed for new structures indicates a renewal of confidence among speculative builders, though some find it hard to complete operations on hand. Lumber and building materials are quiet and deliveries are behind, owing largely to car shortage. Demand for paper continues good, with prices fair.

The following telegrams show trade conditions at the cities mentioned for the week ending February 21:

BOSTON.—Trade in dry goods still continues very active. In many lines of textiles business is unhampered except for delay in deliveries from first hands. Cotton cloths of all kinds are very strong and some are advancing. There is notable scarcity of goods, and buyers are willing to pay increased prices to obtain desired supplies. Dress goods are active and strong. Silks show increased strength. Spring trade in millinery goods has started actively and shows indications of proving of large volume. Conditions in the leather and shoe market are unchanged. Hand-to-mouth buying prevents large deals, but a good volume of business is being done in all lines. Many houses in both trades report business quiet and disappointing. For the first time this year shipments of footwear for the past week exceed those of the same week last year and the previous week this year. There is a satisfactory demand for chemicals. The market for drugs exhibits a firm tone. The demand for dyes and tanning materials continues of moderate volume. Trade is quiet in house-furnishing lines, and payments are generally slow. Jobbers of electrical supplies are quite busy and collections are fairly prompt. In the lumber line conditions are not

materially changed. Southern lumber is in light demand and dealers complain of slow deliveries on orders. Western lumber is in more active demand, and the market on northern and eastern stock is reported firmer, with some advance on finer qualities. In iron and steel, prices show but little change, the demand for pig iron being slow. Prices of paints and oils continue firm, with prospects of higher figures. Hard coal is in fair demand, but shipments of soft coal have been retarded by cold weather. The provision market in general manifests a strong tone, and further advances are anticipated. The Lenten demand has caused a satisfactory volume of business in fish, and scarcity of desirable supplies has kept up prices.

PROVIDENCE.—In the manufacturing jewelry business orders show a remarkably strong tone for this season. Collections in this line are quite satisfactory. Coal is in good demand, especially anthracite. Cotton goods are firm in demand, with prices slightly higher. Collections are fair.

PORTLAND, ME.—Ice harvesting is about over; the quantity cut has been large and the quality excellent. Grocery and provision trade quiet. Hardware, building material and similar lines are feeling the effect of approaching spring and showing some improvement. Dry-goods, clothing and hat dealers report the usual demand. Manufactories of all kinds are in full operation. Logging conditions in the woods are good, with very favorable prospects that the winter's cut will be readily rafted to the mills in the spring.

PHILADELPHIA.—Wool shows little change and prices are firm, with sales moderate. Cotton yarn continues strong and prices are maintained. Dry-goods jobbers report a good spring business in sight, but collections continue slow. Flour is firm, millers making no concessions, but consumers are buying sparingly. Chemicals and dyestuffs are somewhat duller, but prices are unchanged. Paints and glass continue dull and unchanged. Lumbermen report a stiff market, but deliveries have fallen off somewhat on account of the wintry weather. Orders for future contracts, however, are being freely placed. Hides and skins continue firm on fair demand, good supply and high prices. Glazed kid is quiet. Leather remains firm, with less activity, fair supply and high prices, and no indications of a change. Wholesale and retail shoe dealers report business as slightly fallen off. Tobacco sales are few and small; the trade is usually quiet at this season, but it appears somewhat more so since February 1; collections are slow. Liquor distillers as well as wholesalers note a falling off of sales. There is no change in iron, demand continuing good and prices strong. Transportation difficulties have caused some interruption to the coal trade, but conditions are fairly satisfactory, prices for standard grades being uniformly steady.

PITTSBURGH.—In the pig-iron market demand is light, with buyers holding off in anticipation of a softening in prices for second-half delivery. During the week sales aggregating about 5,500 tons of iron were made, of which 1,000 tons was Bessemer and 1,000 tons basic iron for second-quarter delivery, the prices obtained being $22.50 for each at the valley furnaces. The balance of the iron sold was mostly basic and malleable for second-half delivery. If anything, coke is somewhat weaker, owing to favorable weather conditions for shipping. At the valley furnaces the quotations for pig iron for spot delivery are as follows: Standard Bessemer, $23; chilled basic, $22 to $22.50; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $3.50 and foundry coke at $3 to $3.50, at the ovens.

BUFFALO.—While unseasonable weather affects retail trade, jobbers report liberal orders. Collections are good. Prospects are for a larger business this year than last.

BALTIMORE.—House trade has started earlier than last year. Buyers here are chiefly from South Carolina and Georgia, and the indications are that business will fully equal that of February, 1906. Orders already placed with textile mills exceed those of last year, but slow deliveries are a source of complaint. This, however, is common in practically all lines. Shoe jobbers report collections slow but orders coming in fairly well, though immediate demands are moderate. Prices have an upward tendency, and business compares favorably with 1906. Fertilizer manufacturers report trade active and orders fully up to this period last season. Prices rule firm, in keeping with the advance in raw material; collections are satisfactory. Brush manufacturers are busy. Paper is very active and price advances are anticipated; collections are slow. Harness manufacturers are receiving increased spring orders, with the outlook good, but collections are backward. The cotton-duck industry shows a very successful year, with a large number of orders now in hand. Local steel manufacturers are also busily engaged. Railroad-car manufacturers are taxing their facilities in filling increasing and pressing demands. Jobbers of dry goods and notions report very satisfactory sales, and the supply is far below that anticipated for this season; collections are only fair. Retail trade is of fair volume. Money is slightly easier.

CINCINNATI.—Retail trade is dull, but bargain sales have enabled dealers to reduce stocks. Jobbers of dry goods, notions and women's wear report a very satisfactory spring trade at slightly increased prices. Traveling men say country trade is good, and money is easy. Shoe manufacturers are working to full capacity. Groceries are firm and moderately active. Whiskey is firm on good demand.

PEORIA.—Jobbers report trade satisfactory, but sales in the retail line are light, as weather conditions are not favorable for winter goods. Collections are somewhat slow.

ST. LOUIS. — The unusually good conditions existing throughout the southwest have enabled manufacturers and jobbers in almost every line to show an increase over last year's business. Local financial circles appear disturbed on account of the attitude of the various legislatures now in session, but large buildings in the city already under contract are being pushed rapidly to completion. However, comparatively few new enterprises of this character are being undertaken. Retail trade is only fairly satisfactory, owing to weather conditions. Collections are good, yet some lines make complaint. It seems to be the policy of the various railroads in this section to curtail expenses as much as possible, but some improvements in the way of double-tracking are contemplated for the summer months. Winter wheat is in good condition.

KANSAS CITY. — Visiting country merchants, attracted by low railroad rates, have had a stimulating effect on jobbing trade. Therefore house sales in leading lines have been large. Spring trade in all wholesale lines compares favorably with that of a year ago. Business at retail is fairly good. Collections are quiet.

MILWAUKEE.—Business in jobbing lines continues satisfactory. Collections are fair and money is easier.

SIOUX CITY.—Bad roads and floods have caused a falling off in orders from jobbers. Local retail trade is normal. Collections are fair.

DAVENPORT.—Retail trade is active, spring-like weather being the principal stimulant. Jobbers and manufacturers are all fairly busy. Collections are fair.

MINNEAPOLIS.—Mild weather has helped to break the snow blockade on the railroads in North Dakota, and jobbers report improved business in that locality. In other directions business is very fair for the season.

OMAHA.—Railroads have been greatly hampered by recent washouts and have been unable to handle shipments without long delay. General trade is seasonable and collections are fair.

LINCOLN.—Trade and collections are fair.

CHARLESTON.—Wholesale grocery trade continues good, but other lines are quiet. The cabbage crop is in excellent condition and promises to surpass last season's. The South Carolina state dispensary has been abolished, and a movement is now in progress for the establishment of county dispensaries. Collections are fair.

AUGUSTA.—Trade at retail is dull, but a slight improvement at wholesale is noticed. Collections are slow.

ATLANTA.—Good weather has improved trade in all lines. Jobbers in shoes and dry goods report a substantial increase over last year's business. Collections are fairly satisfactory.

JACKSONVILLE.—Considerable increase is noted in tourist travel. Jobbing trade is satisfactory and retail is good. Collections are fair.

BIRMINGHAM.—Southern foundry pig iron No. 2 is held at $18.50 for last-quarter delivery. Trade is not quite so brisk, owing to sultry weather. Collections are poor.

MOBILE.—Storm-swept timber in the lower end of Baldwin county has been damaged by fire. Surplus stocks of lumber have been sold and all mills are now in full swing. Prices are firm. Jobbers and retailers report a small volume of business. Collections are satisfactory.

MONTGOMERY. — Trade in groceries and provisions is not fully up to expectations, and in other lines jobbers report business as only fair. Collections are slow. Real estate is active, and there are several large buildings being erected.

CHATTANOOGA. — Trade conditions continue favorable. Collections range from fair to good.

MEMPHIS.—Wholesale and retail business is improving, but it is not up to last year. Collections are slow and money is tight. The car shortage is delaying the movement of cotton. Warehouses, compresses and railroad platforms are congested.

NASHVILLE.—Merchants complain of slow collections, but orders continue to come in freely and building lines show activity.

NEW ORLEANS.—Trade is improving. Retailers report satisfactory business and jobbers are becoming active. The crest of the Mississippi flood is now passing New Orleans, and the levees are holding well, with no likelihood of a break. Farmers are preparing the ground for spring planting under favorable weather conditions and are making arrangements for a large cotton acreage.

LITTLE ROCK.—Cotton receipts are holding up well and are 50,000 bales in excess of this time last year. About three weeks of almost perfect weather has enabled farmers to make extensive preparations for spring planting. Trade continues active and collections are fairly good.

FORT WORTH.—There are complaints of lack of moisture and dry conditions generally. The weather is warmer and unseasonable, and insects are doing damage to grain.

DALLAS.—Jobbers in all lines report trade good, but slow collections. The best authorities report the wheat crop to have been totally ruined by green bugs, and a large number of farmers are plowing up the crop, with a view of planting it in oats or cotton.

WACO.—Trade is quiet and collections are slow. Dry weather continues, much to the detriment of grain.

SAN FRANCISCO.—Trade activity is undiminished and building materials are arriving in increasing amounts. High prices still act as a deterrent.

SEATTLE.—There has been a marked improvement in all lines of business brought about by the resumption of transportation after the snow blockade. Spring trade is already showing symptoms of activity, and large orders are coming in from Alaskan dealers. Collections are good, and prices are firm.

SPOKANE.—General trade and collections continue slow. The freight congestion is being relieved a little. Building and real estate are active.

TACOMA.—Ideal weather conditions have started extensive building. Trade in general is ahead of last year, with conditions favorable for a good increase on receipt of merchandise long on the road.

PORTLAND, ORE.—Settled weather conditions has improved retail trade and transportation companies are now handling shipments in the usual manner. Collections also show some improvement.

TORONTO.—The feature of the dry-goods trade here at the present moment is that winter stocks at retail are being cleaned up in all parts of the country. In the west this process has been interfered with by the heavy weather, but this trouble is now pretty well passed and there is some reorder trade. Collections are now fair, and the fact that retailers will enter spring with fairly empty shelves means that not only will purchases of spring lines be heavier, but that payments will be prompt. The fact, however, that prices for nearly all lines are high may induce buying of the hand-to-mouth variety. Great activity in building is looked for. There is already a demand for supplies, and structural steel may be expected to be very active during the coming year. Lumber prices are advancing. Butter and cheese hold steady to firm. Hides have an easier tone, while wool is quiet.

MONTREAL.—General trade shows a better tone. The weather has been better and demand for retail lines brisker. Sorting lines are also moving fairly well. There have been heavy shipments of spring lines, and it is expected reorder trade will be very heavy. Orders for summer lines of dry goods are large. Orders for spring lines are still coming forward, but it is likely that in some lines retailers will be disappointed as to deliveries. The volume of business this season is considerably larger than that of last year. All values hold firm and manufacturers' deliveries are still slow. The movement in groceries is improving slightly. Demand for metals and for general hardware is very active; prices tend to further advance. Manufacturers are very busy and the shortage of labor is still affecting production. Boot and shoe manufacturers are busy, but they are not heavy buyers of leather. There is a good export demand.

VANCOUVER-VICTORIA. — The recent cold weather had a quieting effect upon provincial industries. This condition, however, can last but a little while, and trade will be just as active as ever. The shipping trade is active, and the business between these ports and the Orient is steadily growing. Collections are fair to good.

WINNIPEG.—General trade throughout the west has assumed a more regular tone. The railroads have pretty well overcome the snow blockades and are busy moving freight which has accumulated. They are still, however, unable to do much in the way of moving that part of the last crop in the barns of farmers, and until this grain is marketed there is not likely to be much improvement in collections. Country roads are in a much better condition and retail trade is brisk. There is a good demand for all seasonable lines, and the outlook for spring trade has brightened, although it has been very cheerful all along. At the present moment collections are still a little slow.

FINANCIAL.

Money Market.

No special change occurred in the position or tendencies of the money market during the week. As the week progressed there was a slight hardening in quotations for time loans, and a slightly greater demand seems to have been shown for arrangements of that kind running for long periods. Call money was in fairly good supply throughout, the rate for renewals working up from 4 and 5 per cent. at the end of the week. It was pointed out, of course, that from now on the banks may be expected to lose moderately, owing to the beginning of the usual spring demand for funds at the interior. The fact that exchange is at the gold import point without being productive of any such arrangements is commented upon more or less, the general conclusion being that international bankers hesitate to use the command which New York presumably has over the London money market in view of the continuance of the rather strained position there and the absence of any particular necessity just now for such assistance to the American market. Not a little anxiety prevails as to the fate of the Aldrich bill in Congress, the feeling being that while it is, of course, only a partial remedy, the provisions whereby customs receipts can be deposited in the banks and the enlargement of the amount of circulation which banks can retire each month, would have some favorable effect. It may be noted that commercial paper continues dull, the demand being, as previously, almost entirely from out of town.

New York Banks.

While last Saturday's Clearing House averages were generally construed in a favorable way, it was in some respects a confusing document. The loans exhibited a decrease of $7,295,400, which probably reflected the liquidation of the preceding week in the stock market. A decrease in the cash items of over $900,000 was out of accord with the known movements of money for the week, which indicated a materially larger loss in actual money. On the other hand, the decrease of $8,016,300 in deposits made a good balance as respects the changes in the two other items just refered to. Reserve requirements, therefore, were $2,004,075 smaller, and as a result the surplus reserve increased $1,085,175. The figures of the statement compare as follows with those of the preceding week:

	February 16	*February 9*	*Changes*
Loans	$1,092,061,400	$1,099,356,400	D. $7,295,400
Specie	192,167,500	190,382,100	I. 1,785,400
Legal tenders	76,650,100	79,354,400	D. 2,704,300
Deposits	*1,057,546,200	1,065,562,500	D. 8,016,300
Circulation	53,194,300	53,334,800	D. 140,500
Total reserve	268,817,600	269,736,500	D. 918,900
Reserve required	264,386,550	266,390,625	D. 2,004,075
Surplus reserve	4,431,050	3,345,875	I. 1,085,175

The following compares the statements for the respective weeks in 1907, 1906 and 1905:

	Feb. 16, 1907	*Feb. 17, 1906*	*Feb. 18, 1905*
Loans	$1,092,061,000	$1,052,380,600	$1,136,012,100
Specie	192,167,500	188,500,900	220,953,800
Legal tenders	76,650,100	79,438,300	86,389,600
Deposits	*1,057,546,200	1,048,633,100	1,192,555,900

New York Securities Market.

During the past week the New York stock market has been irregular and somewhat drooping in its tendencies. It was a broken week owing to the holiday on Friday and the decision of the Stock Exchange to close on Saturday also. There were no particularly adverse developments. Indeed, one of the notable happenings was the placing of a large bond issue by the New Haven road in the Paris market, which was distinctly favorable, as it increases what may be termed the command the American money markets exercise over those of the old world, and would indicate that, despite the apparent unwillingness of international bankers to take gold from London for New York at present, a specie movement toward this country may be looked for as among the possibilities of the near future, should occasion demand such a course. On the other hand, the bearish operators in the board room discovered early in the week that there was a deficiency of buying power and proceeded to attack prices with a certain amount of vigor. In support of this a variety of allegations were set afoot. It was, for instance, claimed that the so-called Aldrich bill is likely to fail of passage owing to the short time which will elapse before the termination of the present Congress. Another reason given for bearishness by the professionals and for renewed hesitation by the speculative community was that on next Monday the Interstate Commerce Commission will resume the hearing in the Union Pacific investigation at New York, with Mr. E. H. Harriman as the principal witness, the deduction being drawn that revelations of an unsettling character may be the outcome. In fact, Union Pacific was made, on this, one of the especially weak features of the list, and it would seem that not a little liquidation was occasioned in that stock. The unexpected announcement that the Pennsylvania Railroad had just sold $60,000,000 more notes was also for a time the basis of adverse comment and sentiment, though the announcement in this respect was accompanied by further assurances that the Pennsylvania contemplated no further borrowings and would indeed use $50,000,000 of the amount involved to retire other obligations which mature next autumn. The Gould stocks, too, which had shown a rather steadier tendency at the end of last week, were again subjected to some pressure, there being vaguely unfavorable reports about the Wabash and other lines of that system.

On the whole, the market, however, presented the appearance of having been subjected to the pressure of short selling rather than of any general liquidation. Some support was given to this idea by the tendency which the market showed on Friday to become duller, and a little firmer upon covering by the shorts, who were naturally averse to keeping their lines outstanding over a three days' holiday. Apart from the stocks mentioned, it may be said that there was a lack of especially important features. The standard trading stocks like Reading, St. Paul, Erie, etc., acted rather uniformly under the before-mentioned selling, and their course was followed by the industrials and the copper shares. On Thursday, however, Reading was again raided with some success, and while its behavior did not have much effect on the rest of the market, the influence, speculatively speaking, was rather unsettling.

Foreign Exchange.

In the main the exchange market this week has been sluggish and showed a rather heavy tone. The fluctuations in rates were, however, rather unimportant, demand sterling having had 4.84.45 and 4.84.60 as its extremes. Posted rates were unchanged throughout. More or less discussion has been heard regarding the possibility of gold imports, but American banking interests seem unwilling or unable at present to bid effectively for the new specie which comes in at London. It is, however, urged that the recent sales of our railroad securities abroad, especially the placing of the New Haven Company's bonds in Paris, increase the likelihood of a renewed movement of gold to this side of the ocean whenever the financial situation in Europe permits.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Feb. 16	*Feb. 18*	*Feb. 19*	*Feb. 20*	*Feb. 21*	**Feb. 22*
4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.84½ @ 4.85½	.... @ ....

* Holiday.

Closing quotations on Thursday for actual business in other classes of bills were: Cables, 4.85.10@4.85.25; commercial bills, 4.79⅝@4.80¼; francs, 5.24⅜@5.21¼; reichsmarks, 93⅝@94 7-16.

The Bank of England discount rate remains unchanged. Its statement showed an increase of £1,293,687, the proportion of reserve to liabilities being 48 per cent., against 50.29 per cent. a week ago. The borrowings by the market from the bank apparently increased £3,897,000. In the London open market call money is 4½@4¾ per cent., discount being 4⅞ per cent. for short and 4¾ per cent. for three months' bills.

Boston Shoe and Leather Market.

The leather market is only fairly active for the season and some houses report business quiet. A large quantity of leather is still going forward on contracts made several weeks ago. Patent-leather manufacturers have been helped by the weather to some extent, but are still behind on shipments. Conditions in the shoe market are unchanged. There has been, however, a noticeable increase in shipments this week. For the first time this year the *Shoe and Leather Reporter's* figures show a good margin over those of the same week last year. Last week, 101,090 cases; preceding week, 84,551; last year, 94,901; total for 1907, 634,069; total for 1906, 701,824; decrease, 67,755.

Boston Wool Market.

The market continues quiet but very firm, with no signs of weakness anywhere in sight, though trading is necessarily restricted by the small stocks in dealers' hands. Three-eighths and quarter blood fleeces have sold better during the past week, mainly owing to the improved condition of the heavy-weight goods market, but other grades of domestic wools have moved slowly because of the small supplies. Foreign-bought wools have been arriving freely, and this has caused more or less withdrawal of some manufacturers from the market, but both large and small mills are still buying lots of both foreign and domestic grades in the local market to tide them over until the direct wools arrive, and a great many inquiries have been noted in this direction. Those mills that bought abroad will of course be out of the market when their wool arrives, but at the same time their wool will not come upon the market, and such manufacturers as have not purchased abroad must get their supplies from the dealers. It is stated that many of the mills that are waiting for wool bought in Australia, on which five-eighths of a cent more was paid for shipment via Vancouver, are buying quite heavily from dealers, as their shipments are being held up in the west owing to transportation difficulties, while mills that bought at a higher price in London are receiving their supplies on time. There is little or nothing being done in the west by Boston houses in the way of contracting, though a few houses are reported to have contracted for practically the entire clip in Utah. Business conditions have so changed in the wool trade of late that, as one dealer says, "there is no visible supply and no accumulation of stocks, for the wool trade is right up to the point where the wool goes direct from the sheep's backs to the goods mills to such an extent that dealers do not consider it good business policy to take a chance. This condition will probably continue for several years, though, as a rule, manufacturers do not carry more than two or three months' supply of wool on hand."

BUILDING UP OUR FISHERIES.

According to the New York *Sun*, "the importance of fish as a food product is not appreciated by the average American citizen, and is hardly guessed at by those who live in the interior. The bureau of fisheries of the United States government is one of the busiest agencies of Uncle Sam. It distributes eggs, fry and yearlings of thirty-six species of fish at the rate of nearly two billions a year, and is ready to aid any endeavor to protect or propagate fish. There are thirty-two regular fish cultural stations, and numerous sub-stations which are in operation for only a part of the year.

"The belief that the food fishes of the eastern coast of the United States were decreasing in number was the immediate cause of the organization of the United States Fish Commission in 1871. It soon became evident that destructive methods, over-fishing and the pollution of streams by sawmills and other manufactures was causing a fearful decrease. To correct these hindrances the commission began the artificial hatching of a few species of food fishes, and from this small beginning has grown the work of the fisheries bureau of to-day.

"The initial experiments were with shad, a fish which spends most of its time in salt water, coming up into the rivers in the spring to spawn, the Potomac, Susquehanna and Delaware being its favorite haunts. The decay of the shad fisheries was stopped, the industry built up to a greater importance than it had ever known, and the specie introduced on the Pacific coast, where it was absolutely unknown until the commission took it there.

"The advantage of artificial propagation may be illustrated by the common brook trout. Under natural conditions its eggs are not all fertilized, because they are the prey of many voracious fish and animals, which find them good eating, and it is considered that not more than one egg out of fifty hatches and grows to maturity. Under the artificial methods employed by the bureau at least 75 per cent. of all the trout eggs can now be hatched and brought to maturity. When they have reached a length of from three to five inches and are ready to take care of themselves they are sent out to the creeks and brooks. Last year over 1,000,000 yearling brood trout and over 6,000,000 yearling spotted trout were distributed. A recent expedition resulted in the discovery of the most beautiful type of golden trout known. The fish is peculiar to the waters of Volcano creek, in the Kern river region.

"The first consideration in the distribution of the product of the hatcheries is to make ample return to the waters from which the eggs have been collected. The remainder of the fish are sent to applicants all over the country for stocking state waters, private ponds and streams. They are delivered free of charge at the nearest railroad station. The fish are delivered in the cars which are constructed for and owned by the bureau, and which make regular tours over the country.

"The introduction of the German carp into this country has been severely criticised, but the fact remains that, however much the anglers object, the carp catch is now 17,000,000 pounds a year, and the money derived from that industry is about $500,000—nearly as much as it requires to carry on the work of the bureau.

"The Pacific salmon fisheries have not only been saved from absolute ruin, but those on the Columbia and Sacramento rivers have been built up to proportions never known before the day of the artificial hatchery. The salmon run in these rivers is now greater than ever known, and government hatcheries are turning hundreds of millions of fry into these rivers every year. The conditions of the salmon fisheries on Puget sound and Fraser river, where but little attention has been paid to artificial propagation, are in marked contrast. There the run of salmon is decreasing and the fisheries are maintained only by the taking of fish formerly rejected as of inferior quality.

"Around the salmon there is the all-pervading mystery of the north. It is born in fresh water and comes back to its birthplace to die. Beyond this little is known of its habits. How far it goes when it puts to sea, what it lives upon and how long it remains away are questions that no man can answer. Great schools of them have been sighted in the ocean hundreds of miles from land, but when seen they were always headed toward the shore and fresh water. They travel in such numbers that often the smaller streams are literally choked with them. They follow closely along the shore in the search of suitable spawning grounds. The male scoops out a little furrow in the sand with his nose, in which the female deposits her eggs. As soon as this is accomplished her usefulness is ended and she soon dies.

"The oyster has not been neglected. The local authorities in oyster bearing states now regulate their taking with much strictness, which is largely the result of the influence of the federal bureau. The commission has been experimenting with the fattening of oysters, and has been so successful as to warrant the prediction that within a few years this artificial feeding and fattening will prove a profitable commercial industry.

"Another field of experiment undertaken by the bureau is the cultivation of sponges in the Florida waters. Large sheep's-wool sponges are cut into small pieces and fastened at regular intervals along an insulated wire which is afterward submerged to within a few inches to the bottom. These small bits of sponges soon heal, form an organic attachment to the wire and begin to grow. This method will greatly increase the yield within a decade.

"The lobster comes principally from New England and requires most careful nursing. Up to this time the utmost efforts have only succeeded in retarding his decline. It is believed that without the efforts put forth the species would in a comparatively short time have become practically extinct. In ten years the catch decreased one-half in weight and nearly doubled in price. The fact that the demand keeps the price up makes it exceedingly difficult to enforce proper measures for protection.

"The lobster does not breed oftener than once in two years, and the intervals may be even longer. When the eggs are finally hatched, after ten or eleven months, they must live four or five years under the most adverse circumstances before being ready for the bill of fare. It has been carefully estimated that not more than one out of a thousand ever reaches maturity. The experiments in artificial propagation have been attended with some measure of success, but the difficulties are many. A lobster is the prey of everything in the water, animal or vegetable, from his birth to his death, and when there isn't any other trouble on hand he turns cannibal and eats his brother. Yet he is worth nearly $2,000,000 a year to Uncle Sam's fishermen, and the government will take care of him if it can.

"The vast amount of wholesome foodstuff resulting from the fisheries in the United States is not generally realized. The total annual catch is 2,000,000,000 pounds, valued at about $50,000,000. There are 225,000 men employed in the industry and $75,000,000 capital invested. As the wild game and fowl have disappeared from our forests, so the fish would disappear from our waters if they were not protected and propagated. Animals and fowls are bred for food, and the practice is accepted as a part of the daily life of the nation. To save the fisheries from depletion is another wise step in economic civilization."

PATE DE FOIE GRAS.

"American poultry breeders, so far as the goose end of the business is concerned, are behind the times," says the *American Farmer*. "They indeed raise millions of geese for market, they supply the demand for roast goose, stuffed goose, goose fricassee, with a valuable by-product from feathers as a side line, but still they have not caught on to the real golden egg that can or should be laid by this blooming bird. We hear of no establishment in the United States devoted to raising geese, not for their meat, not for their feathers, but for their livers exclusively. Nowhere in this broad land do they make goose-liver pie.

"Every one of our poultry raisers knows about, if he does not own, the famous Toulouse geese, but he is ignorant of the possibilities of this bird in its native home in the sunny land of France. When imported over here the Toulouse goose is used for ordinary purposes or perhaps for exhibition at shows. But see him on his native heath, where his whole mission in life is to have his liver stuffed up to enormous proportions for pie-making purposes. Thrifty France exports enormous quantities of this foie gras. It appears on the table of every epicure in Europe.

"The department of which Toulouse is the capital is given over to this variety of goose, which, when fattened, weighs from twenty-six to thirty-two pounds. The ordinary goose there and here seldom goes beyond seven or eight pounds. The whole section is given up to geese. They swarm all over the roads, and, according to the last census, the goose population of this one department amounted to 2,000,000. As these birds, after being fattened for the market, are worth about $4 each, the average yearly income from the sale of geese alone will reach $8,000,000. The fattening of geese whose livers are to be sacrificed for pâté de foie gras begins in the autumn. They are cooped up in sheds and fed on Indian corn, softened by being mixed with flour and water. After a month or two of this luxurious life the bird is placed in a dark and silent cell half filled with straw. There is hardly room to move. Over a quart of corn a day, sometimes with milk and soup added, is given. The more up-to-date farmers have a stuffing machine which feeds the birds with rolls of soft food—bran, wheat, barley and potatoes. A funnel is placed in the bird's beak and the food forced down its throat. When these fat geese are brought to the market they sell for prices varying from $4 to $8 apiece. The livers are of enormous size. Three pounds is the average, but in Toulouse livers weighing five pounds are not at all uncommon. Picturesque peasants with baskets on their arms bring goose livers to the shops and markets. Very fat livers are shown in the shop windows for a day before they are cooked.

"A good deal of prejudice exists in this country against foie gras, owing to a notion that the stuff is made of diseased livers, but the French farmers affirm that the liver is not diseased. It is enlarged, to be sure, and doubtless the goose would die of it if not killed at the right time, but if put to death at the psychological moment his liver is fresh and sweet. It may be fried, of course, or otherwise cooked, but its principal purpose is to become the chief ingredient in the celebrated article of commerce known as pâté de foie gras."

GREAT STOCK EXCHANGES OF THE WORLD.

Alexander Dana Noyes, financial editor of the New York *Evening Post*, writes of "Great Stock Exchanges of the World" in *Munsey's Magazine* in part as follows: "The four great exchanges of the world are those of the four great financial centers—London, Paris, Berlin and New York. The amount of wealth converging on the investment markets ten years ago was much greater in any of the three European cities than in New York, and it is possibly greater now in London or Paris. This difference, however, is not reflected in the relative amount of business done. The record of daily sales is not compiled on any of the exchanges mentioned except the New York; indeed, it is not officially compiled even in New York. The right to do the reporting on the New York exchange is farmed out to two so-called 'ticker companies,' whose agents, receiving returns of a small army of messengers on the exchange, send them consecutively through their telegraphic indicator over the 'tape.' Newspapers employ staffs of men whose sole duty is to foot up the daily and weekly record. The result is probably a close approach to accuracy; if not exact, it errs on the side of understating the total.

"In 1905 there was sold on the New York Stock Exchange 263,000,000 shares of stocks and over $1,000,000,000 bonds. There is no reason to suppose that transactions on any European exchange come within a fraction of these figures. On a European market, sales of single blocks of 1,000 shares of standard stocks are rare. The list of securities dealt in on the London Stock Exchange is much longer than that of the New York, but an active day causes no such pressure on the machinery of the institution as in New York. Except for the system of 'clearing' stocks—placing the value of securities bought by one broker against the value of securities sold, and leaving only the difference to be paid in cash—the banking and credit facilities of New York could not possibly endure such a strain while providing for commercial customers. Even with the 'clearing' system, the demand on the loanable funds of banks at times of a boom is so great as to lead repeatedly to extraordinary money rates.

"On any stock exchange the bulk of the purchases is made on borrowed money. In New York trading, if stock selected by a customer for his broker to purchase falls instead of rising, the bank calls on the broker to put up more collateral on his loan, and the broker calls on his customer to put up more margin. If this cannot be done, the stocks are sold out in the open market, and the speculator pockets his loss.

"The 80 per cent. advanced by banks for speculators' trading is, as a rule, lent on call; that is, the bank can demand its return on virtually a few hours' notice. Banks prefer to make such loans, because they can thus keep within reach money which presently may be needed for mercantile borrowers. If the farmer or the planter in Kansas has to have his money in the New York bank back to pay his harvest hands, the bank must pay back the deposit without demur. The speculator then has the choice of two expedients: he may go to another bank to replace his loan, or he may sell his stocks to raise money to pay it off. But if all the interior banks are recalling their farmed-out deposits simultaneously, one New York bank will be in the same position as another, and if all the speculators are in the same situation, some will be selling already and the market will be at a level not at all inviting. Then the hard-pressed speculator is likely to offer any terms which will gain him a day's respite, and here is where the 50 per cent. and 100 per cent. call money rate comes in.

"The New York call-loan system is peculiar to this country. On European exchanges payment for stock purchases is made fortnightly or monthly, not every day. The longer interval enables the broker or speculator, if things go wrong in money, to dispose of his securities more at leisure. This is, perhaps, the chief reason why London or Paris never witnesses the abnormal money rates familiar to Wall street. On the London exchange 7 per cent. is considered excessively high money; 6 per cent. at Paris would be described as abnormal.

"Members of the New York exchange solicit business, advertise for it, maintain for their customers offices, some of which resemble wealthy clubs, and then execute on the floor of the exchange, often personally, the orders collected. By the rules of the exchange a customer must pay a commission of one-eighth of 1 per cent. on the face value. If the customer is speculating on a margin—that is, if his broker is borrowing for him 80 per cent. of the purchase money for his stock—and if 1,000 shares are bought, the commission rises to $125. Since he is speculating, he will sooner or later sell the same shares again, and the broker gets another $125. A dozen such customers, or a score who are speculating in smaller lots, give an income out of commissions quite sufficient to maintain expensive offices. It is this carefully cultivated speculative business, combined with the large transactions for their own account by the members of the exchange, that raises the volume of Stock Exchange business at New York to such startling figures.

"Members of the London Stock Exchange are forbidden to advertise at all. Outsiders must give their buying or selling orders to a broker, who, in turn, employs a so-called jobber to execute the order. The crowds of customers, sitting in easy chairs in the broker's office, before the blackboard on which the latest 'quotations' are inscribed, are not seen in London. Methods in Paris are even more conservative than in London. The agents de change of the Paris Bourse make up one of the most conservative financial bodies in the world. Nominally only sixty in number, they never solicit orders, their transactions are mostly conducted for large capitalists, and the daily business done is not a tithe of what passes on the New York Stock Exchange.

"The picturesque side of the London market is not seen on the Stock Exchange itself—to which, indeed, spectators are not admitted. It is witnessed in the adjacent streets and alleyways—in Throgmorton street, where the crowd of brokers dealing in South African mining securities at the height of a 'Kaffir boom' has sometimes grown so large as to block traffic; or in Shorter's court, where American stocks are dealt in. At six o'clock of a foggy winter evening—one p. m. New York time, and the height of activity on Wall street in times of a boom—London brokers stand along the curb in the dim glare of the street lights calling out their bids and offers. If an American stock is offered at 99, and if another broker's cable message from Wall street reports the New York Stock Exchange is bidding 100, there is immediate profit in buying the shares in London and instantly cabling to New York to sell a similar amount. No time must be lost, however, in this operation. Ten minutes' delay in reporting the London purchase to the Wall street agent and the New York price may be 98 or lower. The broker who buys in London and sells in New York will possibly when he gets the stock certificates send them by steamer to Wall street for delivery. While they are on the way his agent must borrow a similar amount of the same stock in New York to make delivery, paying interest and returning it when his own shares arrive from London. In the spring of 1901, when two great groups of capitalists, fighting for control of Northern Pacific, had bid up the price to extravagant figures at New York, London brokers sold heavily in Wall street and sent on their London shares. But while these foreign holdings were on the water Northern Pacific stock was cornered, and prices as high as $1,000 per share were paid by some borrowing brokers to replace them.

"Any one who wishes to buy or sell a stock in some little-known industrial will send to the New York curb for his quotation. It may not be known when a new security will be issued, on what terms, or even that it will be issued at all, but on the New York curb it is calmly bought and sold—so many shares at such-and-such a price with the explicit proviso 'when, as, and if issued.'

"Years ago there arose in Paris a curious organization known as the coulisse, and so called because that word, describing the wings of a theater behind the scenes, marked out a humorous analogy to the irregular brokers who swarm the steps and corridors of the Bourse, conducting their sales and purchases with such vociferous energy as fairly to drown the murmur from the exchange itself. There is added nowadays the shifting of orders to the remarkable 'credit' institutions—something between an American trust company and an investing corporation. In the hands of the huge banking institutions, the thrifty small capitalist of France leaves the securities he owns.

"One reason why Stock Exchange business at New York so far surpasses that of the European exchanges is that a far larger proportion of the Wall street purchases are purely speculative. It has been estimated that less than 10 per cent. of the stocks bought on the New York Stock Exchange are bought by investors to keep.

"In 2,000,000-share days, $75,000,000 of the reported sales may represent stocks which are virtually sold by pool experts to themselves, and $50,000,000 more stocks which were bought in one hour to be sold the next.

"To these peculiar transactions must be added the buying and selling of individual speculators with considerable fortunes of their own, who will also trade, on borrowed money, in stocks representing four or five times as much wealth as the buyer owns.

"During the last few years operations of this sort, conducted on borrowed money, have reached at New York a magnitude that would have frightened any market in the world a dozen years ago."

NEW YORK'S GROWTH.

The reports of the various companies operating the principal traffic lines in Manhattan and the Bronx for the past ten years reveal some interesting figures relative to the growth of traffic on the elevated, principal longitudinal surface, and, latterly, the subway lines.

In 1897 the number of passengers carried on the elevated lines was 182,964,851, and the surface lines carried 307,187,939, making a total for the year of 490,152,790. Ten years later, in 1906, the elevated and subway lines carried 395,716,386 passengers, and the surface lines carried 611,445,547, making a total of 1,007,161,933. This was a gain for the ten years of 517,009,143, or more than the entire number of passengers carried by all the lines in 1897.

From 1897 to 1904 the gain in traffic on the elevated roads was 56 per cent. for the entire period, while on the surface lines the gain was 75 per cent. for the same time. After the opening of the subway lines, in 1904, the percentage of increase in traffic on the combined elevated and subway lines was 38 per cent., while the increase in the number of passengers carried on the surface lines was only 15 per cent.

The following table gives the number of passengers carried on the principal surface lines, the elevated, and, latterly, the subway in Manhattan and the Bronx for the ten-year period from 1897 to 1906, both years inclusive:

	Elevated	*Surface*	*Total*
1897	182,964,851	307,187,939	490,152,790
1898	183,360,846	367,610,651	550,971,497
1899	174,324,575	452,164,798	626,489,373
1900	181,164,110	484,822,644	665,986,754
1901	190,045,741	507,711,919	697,757,660
1902	215,259,345	455,223,543	670,482,688
1903	246,587,022	518,831,655	765,418,677
1904	286,634,195	527,672,998	814,307,193
1905	339,104,820	521,855,967	860,960,787
1906	395,716,386	611,445,547	1,007,161,933

* Includes record of the subway lines from October, 1904.

The following table, giving the total for all lines and the approximate gain over previous years, shows the fluctuating nature of the growth of transportation in the years named:

	Increase	*P. ct.*
1898	60,818,707	11
1899	65,517,876	10
1900	39,497,381	5
1901	31,770,906	4½
1902	*27,294,772	3¾
1903	94,935,789	12
1904	48,888,516	6
1905	46,653,594	5
1906	146,201,146	14

* Decrease.

SOME REMARKABLE FEATURES OF OUR FOREIGN TRADE.

The ebb and flow of the commerce of the United States presents some curious facts, statistical and commercial. These are the more readily observed by certain figures compiled by the Bureau of Statistics of the Department of Commerce and Labor and made a part of its monthly summary of commerce and finance covering the calendar year 1906.

It is interesting to observe, for example, that while the imports of automobiles during the year 1906 amounted to nearly $5,000,000 in value, this figure was practically offset by the exports of automobiles, which amounted in value to $4,409,186. Curiously, too, of this four and a half million dollars' worth of automobiles exported, over

a million dollars' worth went to that great manufacturing country, the United Kingdom, and practically another million dollars' worth to other manufacturing countries of Europe. The tropical sections of the world, where horses cannot satisfactorily perform the service of local transportation, are already large purchasers of American automobiles, the total exports of this class of vehicles to Mexico having been in 1906 $717,523, against only $192,452 in 1905; while the West Indies and Bermuda took $241,000 worth, South America $167,000, Australia nearly $200,000, and even the British East Indies, $34,111 worth.

Although the United States produces 50 per cent. of the world's copper and exports far more than any other country, it is also one of the largest importers of that commodity. The value of copper imported into the United States in 1906 was over $37,000,000, including in this total $6,750,000 worth of copper ore, while we were at the same time exporting over $90,000,000 worth of that metal, including in this sum a little less than $2,000,000 worth of copper ore, of copper ingots nearly $85,000,000, and of other copper manufactures between $4,000,000 and $5,000,000. A considerable part of the pig copper imported is brought in for the purpose of extracting the precious metals which it contains, and a part of this comes from European countries.

The United States produces 75 per cent. of the world's cotton, yet it imported last year from other countries nearly $11,000,000 worth of raw cotton, to say nothing of cotton waste valued at over $1,000,000, making the average importation of cotton into the greatest cotton-producing country in the world about $1,000,000 worth per month. The cotton so imported is, however, in most cases of a different quality from that produced in the United States, being chiefly Egyptian cotton, of which the long and silky fiber is utilized in the manufacture of high-grade cottons and in some cases for mixing with silk in manufacturing.

Equally remarkable in the line of cotton imports is the fact that although the United States is one of the world's largest manufacturers of cotton goods, the importation of cotton manufactures in 1906 aggregated in rounds terms $69,000,000 in value, being more than 50 per cent. in excess of the value of cotton manufactures exported. This importation of cotton manufactures was largely the high-grade articles produced by hand labor, such as laces, embroideries, edgings, insertings, etc., but also included $12,000,000 worth of bleached, dyed and colored cloths, $3,000,000 worth of cotton thread and yarns, $3,000,000 worth of cotton clothing and over $8,000,000 worth of knit goods.

One would scarcely expect to see the United States including coffee in its statements of the exports of domestic products, but the Bureau of Statistics, in its statements of exports, includes 31,518,494 pounds of green or raw coffee, valued at $3,870,592. This is explained by the fact that Porto Rico and the Hawaiian Islands are now customs districts of the United States, and that their exports to foreign countries are now included with the figures of exports from the various customs districts of the United States, and that doubtless all of this 31,500,000 pounds of domestic coffee exported is the product of Porto Rico and Hawaii, chiefly the former. In addition to this, however, there was reëxported 13,500,000 pounds of coffee of foreign production brought into the United States and sent to foreign countries, chiefly Canada and Mexico.

One of the eccentricities of the import trade and of the domestic taste, as illustrated by the figures of importations, is the fact that despite the general prosperity and increased importations of many articles of luxury, no material increase has come in the importations of champagne. The figures of the Bureau of Statistics show that both the quantity and value of champagne imported in 1906 were in each case less than those of 1905, and practically no greater than they were more than a dozen years ago. Still another curious fact is that the import value per quart of champagne averaged in 1906 less than in 1892, although the prices of many other commodities are believed to have greatly increased meantime.

It is also interesting to note that the United States, which has steadily reduced its importations of tinplate from more than 1,000,000,000 pounds in the fiscal year 1891 to 127,000,000 in the calendar year 1906, has now become an exporter of that article, and that the exportations of tinplate of domestic manufacture were in 1906 $1,001,688 in value, against $702,977 in 1905 and $31,082 in 1900. This exportation of $1,000,000 worth of tinplate of domestic production is exclusive of the foreign tin reëxported. The total quantity of tinplate imported into the United States in the fiscal year 1906 was 120,819,732 pounds, and the exports of tinplate of foreign production in that same period were 120,491,271 pounds, of which all except 57,648 pounds was in the form of cans, boxes and other manufactured articles.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 2, 1907.

Congress has this week displayed the activity usual in the few days preceding the close of a session. A major part of the time has been spent in completing the necessary appropriation bills, but through availing themselves of night sessions the two houses have been able to progress other measures. The Ship-Subsidy bill was given a chance by the action of the House of Representatives in voting on Monday to consider it and to vote upon it not later than yesterday, but it was defeated on a close vote. On Tuesday the Senate passed the Aldrich Currency bill. The vote upon the latter measure was 43 to 14, an outcome which was regarded with much satisfaction by the friends of the bill, particularly in view of the fact that the leaders in the House are understood to be in favor of helping the measure through.

Conferences in great number have been a feature of the week. As the result of action of this kind, the plan of dating packing-house labels has been set aside, and the amendment cutting $5,000,000 a year from the amount paid to railroads for carrying mails has been defeated. The River and Harbor bill as agreed upon by the conferees went through both houses on Wednesday, and on the same day the expatriation bill passed the Senate, having previously received the approval of the House. Among the other measures conference reports on which were adopted by both houses was the bill allowing the government the right of appeal in criminal cases. It is estimated that the appropriations made by Congress at the present session will exceed those made at any previous session in the history of the republic. According to the calculations of Chairman Tawney of the House Committee on Appropriations, the amounts carried in bills that have passed one or both houses of Congress will make a total of $1,000,000,000. Even making a deduction of 10 per cent. from those figures on the supposition that the full amounts may not be finally passed, Mr. Tawney said that a deficit must be looked for at the end of the fiscal year 1908. He made this estimate the basis of an earnest appeal to his colleagues to endeavor to keep down the aggregate of the appropriations.

After a night session devoted exclusively to its consideration the new treaty with Santo Domingo was ratified by the Senate on Monday by a vote of 43 to 19. The treaty provides for the continuance of the present plan of collecting the customs revenues of the islands through American agents and for the segregation and deposit of $1,200,000 a year for the benefit of the creditors of Santo Domingo. The amount now received by the Dominican government is $2,000,000 a year. An amendment to the treaty permits the President to appoint the general receiver of customs without submitting his name to the Senate for confirmation. Another amendment substitutes "the United States" for the President in a clause providing that the public debt of the Dominican Republic shall not be increased except by previous agreement between the Dominican government and that of this country. Secretary Root has received information that the Dominican government accedes to the former of these amendments, and it is expected that the treaty will be ratified at once by the Dominican Congress.

It turns out that the situation in Central America is more serious than was indicated in the statements made by some of the diplomats at Washington last week. Not only are actual hostilities between Honduras and Nicaragua in progress under a declaration of war, but two of the other republics are likely to be involved. It is now reported that Salvador is lending active assistance to Honduras, while it is expected that Guatemala will give secret aid to Nicaragua, if it should not join the latter openly. Whether the contest which has now been begun will be allowed to proceed to a finish seems to be at present an open question. Under ordinary circumstances, it might be permitted to continue, but the intimation is conveyed in advices from Washington that on account of the engagements entered into voluntarily by the three republics principally concerned last year either the United States or Mexico, or both, may intervene to compel a cessation of hostilities and the submission of the matters in dispute to arbitration. A second note has been sent to the governments of the Central American republics, but to this no response has been received, and it would occasion no surprise to learn that the governments of the United States and of Mexico had decided to tender their good offices in a way that could not be ignored.

Fears rather than hopes have this week governed the action of the New York stock market. Favorable circumstances, such as the adoption of the so-called Aldrich bill by the Senate, the continued activity of business, and the expectations which prevail in banking circles that money will remain comparatively easy, notwithstanding the admitted certainty of larger spring demands for funds from the interior than have ordinarily been made this season, have been disregarded. The governing factor has undoubtedly been the revelations brought out by the Interstate Commerce Commission's inquiry into the affairs of the Union Pacific Railroad and its allied corporations, including the Chicago & Alton. What has been elicited in that connection has certainly been sufficient to give the speculative community a bad chill. It is too soon to say whether the threats of litigation by outside stockholders, directed against the leading financiers who figured in the transactions which have just been brought into the light of day, will amount to anything, or whether the Interstate Commerce Commission's practically avowed intention to make such transactions as have thus been revealed the basis for some drastic orders involving reductions of rates will bear fruit. At the same time the situation from a speculative standpoint is an uncertain one, and though there may be exaggeration in the way the street regards the outlook, it is very natural that quotations should wilt, and, as has been the case in the last few days, reach, in many cases, the lowest level seen for some time past.

In a decision rendered this week the Supreme Court of the United States holds that Congress has the power to determine what is an unreasonable obstruction to navigation in the form of a bridge over a river flowing from one state into another, and that it can delegate such power to the Secretary of War. The case in which the decision was rendered was that of the Union Bridge Company vs. The United States. It originated in criminal proceedings instituted by the government under the River and Harbor act of 1903, by which the Secretary was authorized to compel the owners of bridges to alter the structures so as to make navigation reasonably free. The bridge in question in the case lies across the Alleghany river near its junction with the Monongahela at Pittsburgh. In the United States District Court for the Western District of Pennsylvania the bridge company was fined $5,000, whereupon the company appealed, contending that the law was unconstitutional on the ground that Congress could not legislate in the direction indicated, and that even if it could act itself it could not delegate its power to a department. The court affirmed the judgment in the court below, holding that the War Department could properly exercise the jurisdiction conferred by the law, and that the United States was under no obligation to pay for the alterations necessary to comply with the orders of the department. Mr. Justice Harlan, who read the opinion of the court, said that by the statute under consideration Congress had declared in effect that navigation should be freed from unreasonable obstructions arising from bridges of insufficient height, width of span or other defects.

The latest returns emphasize the strength of the showing made by the members of the Left, the radical group in the new Russian Duma. Advices published yesterday reported the election of 486 out of a total of 524 members. Of those elected the party of the Left is credited with 188 members, far and away the strongest party in the new parliament. Notwithstanding the strength shown by the Left, however, the constitutional Democrats declare their ability to form, by means of a combination between the members of the moderate groups and certain of the unclassified Lefts, a centre party which will hold the balance of power. As regards this view of the possibilities a great deal will depend upon circumstances. It is possible that an effective combination of this kind may be formed for a time if the Left should display an extremely radical spirit. At present, however, the temper of the members of this group is said to tend toward moderation, though their spirit may be changed by the course taken by the reactionaries.

A question which the publicity given to the disclosures in the late insurance investigations renders of interest was decided by the New York Court of Appeals in the case of The People vs. Perkins. The conclusion reached was that the contribution of funds of a life-insurance company by one of its leading officials to the national campaign committee of a political party did not constitute the crime of grand larceny. In this case the official in question paid the contribution originally out of his own funds, but was subsequently reimbursed with interest by order of the president of the company. A majority of the Court of Appeals held that an essential element of the crime of larceny is the intent to deprive or defraud the owner of his property, and that that element was lacking in the case before it.

THE NEW GRANGER LEGISLATION.

Reference was made in these columns a couple of weeks ago to the widespread agitation in progress in favor of legislation fixing a maximum rate of 2 cents per mile for the transportation of passengers on railways. It was noted that in West Virginia and Arkansas the state legislatures had passed bills of the kind referred to, and that in several other states similar measures had passed one house or the other of the state legislatures. In the interval considerable progress has been made by the promoters of this legislation. The Nebraska House passed a 2-cent-fare bill on Thursday of last week, and on the same day the Minnesota House passed a similar bill. On the following day the passage of a 2-cent-fare bill was completed in the Indiana legislature, and in North Carolina the Senate passed a 2½-cent-fare bill after the House had passed a 2-cent-fare bill. The Indiana bill was signed by the governor early this week, and the Nebraska bill after passing both houses is now before the governor. The legislatures of Missouri and Iowa have this week passed 2-cent-fare bills, and similar measures are before the legislatures of Pennsylvania, Illinois and Wisconsin, in which last-mentioned state the railroad commission ordered that the passenger fares on three roads running through that state be reduced from 3 to 2½ cents per mile. In all likelihood the movement will spread further, particularly in the west, before it has spent its force.

In many respects the present agitation recalls the well-known granger movement of three to four decades ago, which led to the enactment of legislation in a number of the western states providing that rates should be reasonable, establishing commissions to fix reasonable rates, and even, as in the case of Wisconsin, fixing the rates on different classes of roads. In its inception the granger movement had for its chief purposes the promotion of unity and coöperation among the tillers of the soil and the diffusion of a higher measure of intelligence and culture among them. The National Grange was organized at Washington by members of the order of Patrons of Husbandry in 1867, and in the course of the succeeding decade many thousands of subordinate granges were established, particularly in the upper Mississippi valley. These organizations gradually became the promoters of a movement to render farming more productive, and finally the instruments of an agitation looking to the reduction of the cost of getting products to market as a means to the former end.

They made their first strong impression upon legislation in the state of Illinois, where, in 1871, a law establishing a system of maxima in railroad rates was enacted. This law being declared unconstitutional, the legislature of that state passed two years later a law providing for the establishment of a commission to fix rates, which, it was declared, must be reasonable. Like measures were adopted in Iowa and Minnesota, and, as has been noted, a more drastic law was passed in Wisconsin. The results of this movement are well known to students of economic and legal history. The constitutionality of the legislation of the several states was affirmed in the series in the so-called granger cases, reported in the ninety-fourth volume of the United States Supreme Court Reports.

The economic results of the legislation made themselves apparent before the decisions of the Supreme Court were rendered just one day more than thirty years ago. These results were felt most sharply, as is noted by President Hadly in his work on "Railroad Transportation," in Wisconsin, where the legislation had been most drastic. "The law reducing railroad rates to the basis which competitive points enjoyed left nothing," he says, "to pay fixed charges." In the second year of its operation no Wisconsin road paid a dividend; only four paid interest on their bonds. "Railroad construction had come to a standstill; * * * the development of the state was sharply checked; * * * the very men who passed the law in 1874 repealed it after two years' trial. In other states the laws either were repealed as in Iowa or were sparingly and cautiously enforced."

What will be the economic results of the legislation now in process of enactment cannot, perhaps, be determined as yet. Some persons who have made estimates in reference to the matter say that the loss to the railroads in the western states will run up into the millions. The statistics of the Interstate Commerce Commission indicate that the revenue per passenger per mile on the railroads reported on has run close to the 2-cent mark in recent years, being 1.962 cent in the year ending June 30, 1905, and 2.006 cents in the two preceding years. In Missouri, it is announced, the railroads are preparing data to show that the rate will not allow the roads a fair profit above operating expenses. On the other hand, it was reported a few days ago that the railroads of Wisconsin would adopt a maximum passenger rate of 2 cents a mile, or half a cent less than the rate allowed by the railroad commission of that state. At the same time, while this conclusion was foreshadowed, the general passenger agents of the Wisconsin lines agreed that the adoption of a 2-cent rate would force a reduction in the number of trains in all western states.

It need scarcely be said that legal questions may arise out of the legislation under consideration. The granger decisions were strong affirmations of the power of state legislatures to deal with the question of rate regulation. Perhaps the strongest ruling in that direction was that contained in the case of Peik et al. vs. The Chicago & Northwestern Railway Company et al., where it was held that the legislature of Wisconsin had power to provide by law for a maximum of charge to be made by the Chicago & Northwestern Railway Company for fare and freight upon the transportation of persons and property carried within the state or taken up outside the state and brought within it, or taken up inside and carried without. This decision was, however, in part based upon the principle that until Congress acts in reference to the relations of the railroads to interstate commerce it is within the power of the states to regulate the fares of the railroads so far as they are of domestic concern, even though persons without the state may be indirectly affected. It may be recalled, however, that in the noted case of the Wabash Railway Company vs. Illinois, decided in 1886-87, the Supreme Court held that a statute of a state which attempts to regulate the fares and charges of railroad companies within its limits for a transportation which constitutes a part of commerce between the states is unconstitutional, and does not belong to that class of commercial regulations which may be subject to the laws of a state until Congress shall have exercised its power in relation to it. The trend of general development in the interval since the decision of the granger cases would seem to have somewhat narrowed the limits within which state regulation of transportation matters would be regarded by the Supreme Court as permissible to-day.

THE CHANGE IN PANAMA CANAL MANAGEMENT.

The construction of the Panama canal has thus far furnished one of the knottiest problems with which the administration has been called upon to deal. One after another of the chief directors of the work has come and gone, leaving an impression that it is difficult to define, but which involves, at any rate, some element of disappointment. It is not quite two years since the reorganization was effected which placed Mr. Shonts at the head of the Canal Commission, with Mr. Wallace, the chief engineer, as vice-president and general manager. In the interval, Mr. Wallace and Mr. Shonts have severed their connection with the work, and their example has now been followed by Mr. Stevens, the successor of both, who a short time ago asked to be entirely relieved from work on the canal as soon as he could be replaced by a competent person and that person could become familiar with the work.

This last withdrawal has been a factor in bringing about the change of policy which is indicated in the communication from President Roosevelt to Chairman Shonts of the Canal Commission, whose connection with that body, like that of Mr. Stevens, will continue until their confirmation by the Senate—a result desired in order to avoid any question as to the legality of action taken by them. The President seems to have become wearied of the shifting of control and management which has been a feature of canal administration in the recent past, and in order to secure continuity in engineering management, he has decided to request the commission to assign to the office of chief engineer Major George W. Goethals of the Engineer Corps of the Army. This officer, who is a member of the general staff, has a high reputation for ability in army circles, and has been employed in important work connected with rivers and harbors and fortifications. He will be assisted by Majors David Du B. Gaillard and William L. Sibert, who have also had valuable experience in engineering work. It is not the purpose of the President, in requesting the appointment of Major Goethals, to disturb in any way the present organization on the isthmus, which he regards as very satisfactory, nor to interfere with the work being done by the present assistant chief engineer, Mr. Ripley, and the various heads of departments. The organization already created can, he thinks, be relied upon, under competent leadership, to make further and constant progress, pending a period within which a new form of contract can be devised by Major Goethals and his associates if it is deemed advisable to do the work by contract.

For the present, the President has decided that the bids made under the existing form of contract should be rejected. In so deciding he has been, to some extent at least, guided by the advice of the retiring chief engineer, who proposed that form in its main features, and who believes that the acceptance of either of the two bids that have been seriously considered would not accomplish the purpose sought by the present contract. That purpose was to secure in the building of the canal the services of the best, most experienced and most skilled contractors in the country, at the least risk to them and at the least expense to the government. An investigation into the two bids referred to convinces the President that this purpose has failed. In each bid, he says, the contractors of experience, whose personal services in the work are what the commission has sought, have made arrangements to divide the profits under the percentage bids with bankers or others to whom they have had to look for the needed capital, while the contractors who are actually to do the work have arranged to accept a comparatively small proportion of the profits accruing under the contract. In other words, the government by this arrangement is made to pay a high percentage for the use of capital which it might itself have furnished at a much lower rate, while the percentage which the contractors are to receive for the real benefit they are to confer on the government is reduced to very meager and, perhaps, inadequate compensation.

The outcome of this new policy will be awaited with interest. It will secure an element of continuity in administration and supervision which has been lacking, while, as indicated, it will not preclude a resort to contractors where their services may be availed of in the interest of economy and speed.

THE UNION PACIFIC INVESTIGATION.

As was expected, the examination of Mr. E. H. Harriman, the president of the Union Pacific, and other financiers connected with its affairs, has thrown a good deal of light upon some remarkable chapters in recent financial history. The revelations themselves, together with the strong indications they afford of continued friction among leading individual interests concerned with railway affairs, have naturally been the cause of a decided depression in stock market values and the assertion of very unsettled feeling on the part of the speculative community. In the flood of testimony and the number of very remarkable transactions which have been revealed, in spite of the leading witnesses' endeavor to maintain secrecy regarding what they term their private affairs, the principal object of the commission's inquest has perhaps been somewhat lost sight of. This, however, is very clearly indicated by the counsel for the commission, who stated, in answer to objections regarding the bearing of the facts regarding the so-called Chicago & Alton deal, that the inquiry had a direct bearing upon interstate commerce, and that the object of the commission was to show that the Alton road had been inflated beyond all reason. This, it was declared, had a potent bearing upon railroad rates,

and the determination of the commission was to disclose the process by which the inflation had been engineered and the parties responsible therefor. It will be readily appreciated that in taking this position and exercising its powers to determine whether capitalizations have been made excessive, and if such is the case applying the fact to the dividends which railway companies pay and the earnings which they make, the new powers relative to the fixing of rates, which the commission enjoys under the Esch-Townsend law, might be exercised in a way which might have a very serious effect upon railway revenues. The fact that the commission's efforts were headed in this direction is therefore a matter of far-reaching importance, and would furnish a more adequate explanation of the feeling akin to trepidation which the stock market has exhibited.

Voluminous as the testimony is, the details almost throughout, nevertheless, have been most interesting. It is the contention of Mr. Harriman and his colleagues on the witness stand that their different transactions on behalf of the Union Pacific Railroad Company were not speculative, and that its enormous investments in the stocks of other companies, beginning with the acquisition of the control of the Southern Pacific, and coming down to the purchases made last autumn of large holdings in Illinois Central and other roads, were for the benefit of the company and its stockholders and not for individual profits to officials and directors. It might be remarked, however, in the case of the Illinois Central purchase, that it appears from the record that the company bought its holdings of Illinois Central at 175 from three of its own directors, it being significantly pointed out that the present market value of the stock is in the neighborhood of 160, while an inquiry as to what these directors paid for their shares met with a refusal on the ground that it was a personal matter.

A great deal of the interest in the testimony centered in the really astonishing revelations about the way the Chicago & Alton deal was financed, an interest in that road having been acquired by the Union Pacific by the purchase of 103,000 of its preferred shares at 84. Previous to this, in 1898, however, a syndicate, represented by Mr. Harriman and three other gentlemen, bought the old Chicago & Alton Railway for about $39,000,000. They then acquired another small railway, the St. Louis, Peoria & Northern, and issued the Alton Company's bonds to the amount of $32,000,000, paying themselves a 30 per cent. dividend from the proceeds. In 1904 they organized a new company, the Chicago & Alton Railroad, which took over the stock of the old company, and also acquired the St. Louis, Peoria & Northern, and promptly issued bonds of the new company for $22,000,000, together with $19,000,000 each of common and preferred stock. In other words, the Chicago & Alton's capital was swollen from $39,000,000 to $62,000,000, and on paper the projectors of the scheme appear to have reaped a profit of some $20,000,000, the marketing of the new bonds having seemingly been accomplished, in part at least, through the alliance which existed between the financiers identified with the scheme and certain large life-insurance companies, while the disposal of the stock to the Union Pacific has already been described. This, however, is only one phase of the testimony. Despite the reluctance of the witnesses to bare their personal affairs, which goes to the length of defying the commission, so that it may be necessary to appeal to the courts to compel them to testify, the investigation, which was concluded on Thursday, was a memorable one, and its results, as announced by the counsel of the commission, were satisfactory. Indeed, the statement is made that it will be made the basis of recommendations for additional legislation designed to prevent stock-watering of the kind which has been practiced in the instances brought to light.

STRONG COTTON AND WOOLEN GOODS MARKETS.

Foremost in point of interest and strength of values among textile manufactures at the present time stand staple cotton printed goods, for which there is not only an extremely heavy demand, but also an increasing inquiry, in the face of advances of fully 1 cent per yard since the first of the current year. But even at this advance of ½ cent per month, prices have by no means kept up with the constantly advancing market for gray print cloths, which are now at the highest prices within the experience of the present generation, with an active market in progress. Several factors are directly responsible for this situation—the almost unprecedented demand, the high cost of cotton, the lack of sufficient skilled labor, and the sold-up condition of the mills.

Fine yarn goods are fully as scarce as staples, but prices for this class of goods have not yet shown the same relative advance, although values have been steadily moving upward. This situation is due almost directly to the scarcity of staple cotton, which is difficult to obtain at 30 cents, though the nominal quotation in New York for middling uplands is 11 cents, and a case is known where 50 cents has been paid for a small lot of sea-island cotton. The other main factor in the strained situation is the absolute inability of the mills to make any reasonable delivery, so far ahead is their product sold, and so difficult to obtain are the yarns from which to make the goods.

There exists an actual scarcity of goods, especially for spot delivery; consumption is active and increasing, and production is contracted for so far ahead that there is little in sight to supply any spot demand, even at predicted advances. The mills are unable to run at their full capacity, and their entire product is sold through the remainder of this year, and in some cases as far ahead as July, 1908.

Plain brown and bleached cottons continue to advance steadily, some mills still accepting orders for future delivery at value, but extending no hope of making a price until after April 1. Ordinary sheetings are very active and advancing, with all mills sold far ahead, most of them to the first of 1908, and on such a price basis as to make them practically independent of either price or delivery.

The trade in export cotton goods is quiet, owing to the prevailing high prices in this country. English manufacturers are said to be offering acceptable goods below American makers' prices, and it is becoming evident that unless some mills should be willing to accept the smaller margin of profit offered for the sake of maintaining an established market, the foreign trade of the United States will show a great falling off, in the item of dry goods at least. It is also feared that, by the voluntary abandonment of such markets in order to take advantage of a larger profit at home, the efforts of years may be overthrown, and this outlet to foreign countries for domestic manufactures may be lost.

In general, it may be said that the market is in a very healthy condition, there being less speculation than for years, but at the same time an almost unprecedented demand, and the outlook is for still higher prices and a greater scarcity of goods, with a good margin of profit to the manufacturer, for while textile workers' wages have been advanced and the raw material is costing more, prices for the finished product have maintained an almost equal pace.

The situation in wool is very complicated, conditions of business having changed greatly from those of the past few years. Woolens have been slowly sliding into the background as worsteds gained the popular favor, but the inevitable reaction has begun, and now the attention of the goods manufacturers has been turned to foreign wools more than for several years. This turning from the domestic wools has been aided by the high prices asked by domestic growers for their wool in competition with foreign wools, which, during the past year in particular, have sold at high value. At the present time, between clips, the selections of domestic wools offering are very limited, and the manufacturers, who have bought very freely in London and Australia, are waiting for the arrival of their purchases, and are only entering the open market in this country for small lots to tide them over. It so happens that the great accumulation of foreign wool of the previous season, which was so serious a menace to the market at that time, was worked off during the year, and stocks of both foreign and domestic wool of like grade are very small.

The worsted manufacturers have recently turned their attention to the finer grades, indicating that they are making finer, softer goods, in their effort to prevent their product being supplanted by woolens, and this has caused an excellent demand of late for such small lots as are available. To accentuate this, the shipments from foreign markets have been greatly delayed this year, many lots being far overdue. Some of the direct wools, on which five eighths of a cent more freight per pound was paid for shipment overland via San Francisco or Vancouver in order to insure its delivery early, are stalled on the way, while some of the wools from the London sales, where higher prices were paid, have already arrived and have been sold at a good profit by the dealers. But when this direct wool once commences to arrive freely most of the mills will be supplied, and not only will the demand cease, but lower prices for foreign wools in the open market will probably result, with perhaps some effect upon domestics. The sales of Australian wool in Australasia this year to come to America were about 34,000,000 pounds, the largest on record, indicating the extent to which these wools are being used by American mills.

From experience during the last two years, dealers are very cautious in regard to contracting too far ahead for clips of wool, and this year, owing to the very high prices asked by growers, less has been done, the total thus far being estimated at only about 7,000,000 pounds, this mostly by western dealers and speculators, or for clips of assured quality. Therefore it is highly probable that even more clips than last year will be forwarded to market for sale on commission, thus removing the dealer from fear of loss through speculation.

As noted above, the popular taste has once more turned toward woolen rather than to worsted goods, and in these to the finer qualities, but at the same time the worsted manufacturers are making finer goods to compete. The spring line of trade has been nearly completed, with a very successful season to its credit, the higher quality and priced goods having sold the best. Manufacturers are now nearly all engaged on the heavy-weight run, and in this line, also, the higher quality goods in fine woolens and worsteds appear to be most in demand. All-wool fabrics are admittedly the most called for, and the higher grades of fancy finished and unfinished worsteds in medium weights have sold very heavily, owing to the fine appearance of the new patterns and designs and the popularity of the medium weights. The manufacturing interests are very active, and a large and successful season seems assured. The cancellation question will probably be greatly affected by the organization of the American Association of Woolen and Worsted Manufacturers, a combination of mill men for the purpose of eliminating this and other evils of the trade.

GOLD PRODUCTION AND TRADE OUTLOOK.

In many quarters the opinion finds expression that the wonderful prosperity which the United States has enjoyed for the past year or so is sure to wane and be replaced by contraction in business and a general falling off in the activity which has been in progress. Nor are such ideas confined to this country. Great Britain and the continent have likewise enjoyed active business on a scale approximating closely to that which has been seen on this side of the ocean, and there, also, many persons, whose opinions are deserving of attention, seem to think that trade all over the world has reached its climax and that a downward movement is at hand.

This subject is examined at length in a recent number of the London *Statist*, and in a very illuminating way. The writer of the article in question sums up the argument of what might be called the pessimists as being that, after a long series of extremely prosperous years in almost every country, with a great rise in prices and a rampant speculation in many directions, overtrading has undoubtedly taken place while money is scarce and dear. Great amounts of wealth were destroyed in the South African war and the Russo-Japanese war, leading to great demands to replenish the void, but the war outlays have ceased, the special demand created by the destruc-

tion in the wars is at an end, and a shrinkage in business is therefore a reasonable expectation.

Admitting that there is some foundation for such views, the writer, however, pronounces them exaggerated. The influence of war upon trade, it is pointed out, is by no means as great as might be supposed, and the effect of the great Franco-Prussian war upon France is referred to as an example. In fact, the financial crisis of 1873 originated in and fell upon countries like Austria, Great Britain and the United States, which were entirely outside the sphere of the war's influence.

Coming down to the present situation and answering the question whether it is a warrantable inference that the commercial and financial worlds will see a cataclysm similar to that of 1873, the *Statist* writer answers in the negative. A check in the wonderful business activity all over the world, he continues, is of course something which is bound to occur sooner or later. A check, however, as he points out, is different from a long continued depression, and he fails to see anything of that kind in sight following a serious crisis. Taking up the position in the United States, where the expansion has been on such an enormous scale, and where speculation, too, has been of the rampant kind, together with a manufacturing of companies on an excessive plane, there will no doubt be a check, but symptoms of a breakdown are not apparent. In his opinion, all the crises of the past in the United States have been brought on by sinking more capital in great public works than the country could afford, while the aforesaid works did not pay immediately. It is, however, urged that new building in the United States is not excessive, and as far as railways are concerned, indications of danger are absent. Due allowance is also made for excessive operations in building and real-estate speculation.

Furthermore, the point is urged with a great deal of force that the gold production of the world is over four times what it was in the middle of the '80s, and will be still greater within the next few years. The rise in prices, therefore, it is held, does not necessarily indicate undue speculation, and seems to be attributable in large measure to the increased output of gold, although a further investigation of this very interesting and important subject, viz, the relations between enhanced prices throughout the civilized nations to the augmented gold production, is to be the subject of a further investigation by the same very eminent authority, which will doubtless furnish profitable material for consideration.

DANGER TO THE HARBOR OF NEW YORK.

No expert knowledge is needed to show that, in appearance at least, the water of New York harbor has greatly deteriorated of late years, and that the water is as foul as it looks gains confirmation from the decay of some industries, notably fishing, which at one time were of considerable importance. Also, it may be remarked that a considerable degree of courage is needed to go bathing in the bay in the summer time. These facts in themselves would perhaps be of minor importance were it not for the fact that the changes in the character of the water indicate far more serious troubles yet to come. The source of the pollution to which the harbor waters have been and are being subjected is, of course, the emptying into them of vast quantities of sewerage which are disposed of by the large cities located on the bay shores. In 1905 the New York Bay Pollution Commission declared the harbor to be "an immense cesspool," which, like smaller receptacles, has a natural limit of capacity, beyond which lies danger to the health and comfort of the metropolitan district. Since 1905 the situation has certainly not been bettered, and, as if it were not already bad enough, plans to still further befoul the waters are being actively pushed. It is, for instance, proposed to dump all the sewerage of the Passaic valley in New Jersey into the upper bay, and the Bronx river region proposes to send its sewerage into the Hudson near Yonkers. It is in reference to the latter enterprise, which, though the smaller of the two, seems most likely to reach completion first, that the New York Merchants' Association, despairing of any relief from the New York State Board of Health, which indeed has absolutely refused its assistance, has turned to the Secretary of War and petitioned him to stop this enterprise on the ground that the immense deposits of sewerage in the harbor are becoming a danger to navigation.

That this latter view has much to commend it appears evident from the statistics the Merchants' Association has cited of the extent to which this polluting process has been carried. The authority of the New York Bay Pollution Commission is given for the statement that more than 1,000 tons of dry sludge, one-half of it organic matter, is being deposited in the harbor every twenty-four hours. It is easily demonstrable that the tidal movement does not carry this matter away to the sea. The filling in of the docks and slips in portions of the harbor, and the deposit of more of it on the few remaining beaches and undocked shores to fester in the sun later, are matters of common knowledge. The Secretary of War's own subordinates bear witness to the fact that the existing channels are being affected by the deposits of solid matter in the sewerage. The subject, therefore, ceases to be one which affects merely the health of a portion of the people of one state and becomes one which the national authorities may properly consider and act upon. In the hope that the Secretary will act promptly in the matter, the Merchants' Association appeals to him, not only from the standpoint of health, but from the dollars-and-cents standpoint, to prevent the deterioration and destruction of the finest harbor in America.

It is hardly worth calling attention to the fact that city disposal of sewerage is in a semi-barbarous state in this country. The subject is, of course, one that, economically and æsthetically, lends itself to quick disposal, but the time seems close at hand when the pressure of population and a variety of other reasons will demand a change in the method of sewering our coast cities. Furthermore, there is the possibility, the methods and the men allowing, that this great waste of valuable material, leading to a vastly greater damage to property and health, may be prevented in the future. So far as New York City itself is concerned, the project of building a series of great intercepting sewers to collect and dispose of this matter in an economical and healthful way does not seem so very visionary. Nor is it, perhaps, too much to hope that some leaves out of European experience may be taken which would enable the great city and its surrounding territory to dispose of this great problem in a way satisfactory to all concerned. If such a plan is devised, great and lasting rewards to the man or men who will solve this really threatening situation seem certain beyond doubt. That the present increasingly intolerable methods of sewerage disposal must be superseded seems also certain if New York is to maintain its position as the greatest American city.

SAVINGS BANKS OF NEW YORK STATE.

What might be termed the power of thrift is well exemplified in the annual report of the New York State Superintendent of Banking, in which is shown the great importance of savings banks. At the outset it may be said that the resources of the savings banks of the state amounted on January 1, 1907, to $1,464,950,000, which indicates that the resources of the "poor man's" banks, so called, exceed those of the trust companies, and at the same time the figures are over $500,000,000 in excess of the bonded debt of the United States government. Last year was a comparatively poor one for the savings banks, in that the record for 1905 was not equaled. Thus, in 1905 resources and the amount due depositors increased almost equally by nearly $94,000,000, while in 1906 the gain in resources was $59,149,928, and in the amount due depositors $69,676,969.

The record as to some of the items in the reports of the savings banks for 1905 and 1906 makes an interesting study:

	Gain, 1906 *over* 1905	*Gain*, 1907 *over* 1906
Gain in open accounts	126,244	116,030
Gain in resources	$93,807,399	$59,149,928
Gain in amount due depositors	93,775,724	69,676,969
Gain in market value surplus	980,638	*10,642,159
Gain in par value surplus	4,224,109	5,316,219
Gain in interest paid or credited	3,238,014	3,840,282
Gain in amount deposited during the year	51,116,525	19,306,912
Increase in amount withdrawn during the year	28,415,477	47,121,549
Gain in number of deposits received during the year	414,056	335,905
Increase in number of payments to depositors during the year	*37,909	176,506

* Decrease.

The shrinkage in the market value surplus is to be accounted for by the decline during 1906 of the market value of the high-grade bonds which are legal investments for New York savings banks. The heavy increase in the amount withdrawn during the year is explained by the desire of many depositors to speculate in real estate.

Resources in 1906 advanced by $59,149,928 as compared with those of 1905, the ratio of gain being 4.2 per cent., and as contrasted with the figures of a decade ago the increase amounts to nearly 70 per cent. While the number of depositors has increased in goodly proportion—indeed to a good-sized army of 2,753,295—the probabilities are that the number could be increased to much larger figures if the average person of small means developed the habit of making weekly visits to the savings bank. In other words, it would pay the wage earner to study more closely the power of compound interest on deposits over a period of years. It is true that some other forms of investment yield larger returns than does interest on savings-bank deposits, but beyond question the savings-bank phase of the matter is attended with a minimum of risk.

The importance of the savings banks of New York as compared with other fiscal institutions is fully shown in this table, which contrasts the aggregate resources of the savings banks and trust companies on the first day of January in each of the last sixteen years, and of the state banks of deposit and discount on the day of their reports nearest to that date:

January 1	*Savings banks*	*Banks of deposit and discount*	*Trust companies*
1892	$675,987,634	$271,830,699	$300,765,575
1893	718,454,662	295,459,929	335,707,779
1894	704,535,118	271,496,822	341,466,011
1895	735,863,598	284,911,631	365,419,729
1896	783,078,580	285,407,997	392,630,045
1897	812,173,632	289,691,855	396,742,947
1898	869,751,244	324,766,619	483,739,925
1899	923,420,861	375,485,972	579,205,442
1900	1,000,209,099	366,304,182	672,190,671
1901	1,066,019,216	380,711,930	797,983,512
1902	1,131,564,624	421,616,408	969,403,911
1903	1,191,327,573	360,932,347	1,039,956,625
1904	1,238,800,468	382,080,238	1,030,735,828
1905	1,311,993,505	497,378,209	1,304,016,015
1906	1,405,800,904	522,616,915	1,312,799,130
1907	1,464,950,833	567,986,011	1,365,245,430

EDITORIAL NOTE.

The detailed reports of foreign trade for January and the seven months, published this week, point out even more emphatically than did the preliminary returns the importance to the country's foreign trade of the export business in raw cotton, and of the heavy gain in that item over a year ago, as affecting the total volume of all trade. Thus, in the matter of January exports, the shipments of food and of animals intended for food and of manufactured goods fell off, while the exports of raw materials, largely raw cotton, increased by $30,615,203, or 65 per cent. Exports as a whole in January, however, gained only $18,703,303, or 11 per cent. For seven months the exports of raw materials gained $55,400,161, or 16 per cent., and the gain in raw-cotton shipments alone was $43,218,218, or 15 per cent. It might be noted, however, that exports of manufactured and partly manufactured goods combined increased about $35,000,000, or 9 per cent. for the seven months. In imports the January figures show a gain in all lines and aggregate 18 per cent. more than a year ago, while for seven months the gain is 16 per cent. The January and the seven months' exports and imports compare as follows:

DOMESTIC EXPORTS.

	1907	1906	*Increase*
Food and animals	$15,077,351	$25,888,052	*$10,810,201
Food, partly prepared	32,860,153	36,973,031	*4,112,878
Raw materials	77,436,768	46,821,565	30,615,203
Partly manufactured	23,060,204	19,628,511	3,431,693
Manufactures	38,427,584	38,687,641	*260,057
Miscellaneous	556,461	397,023	159,438
Total domestic	187,438,521	168,395,823	19,042,698
Foreign mdse exported	1,867,835	2,207,230	*339,395
Total exports	189,306,356	170,603,053	18,703,303

IMPORTS.

	1907	1906	*Increase*
Food and animals	$12,211,911	$10,775,841	$1,436,070
Food, partly prepared	11,846,047	7,027,854	4,818,183
Raw materials	45,887,653	38,950,752	6,936,901
Partly manufactured	22,871,249	18,917,765	3,953,484
Manufactures	32,545,587	29,679,077	2,866,510
Miscellaneous	1,224,687	1,170,436	54,251
Total imports	126,586,934	106,521,525	20,065,400

For the seven months from July 1 to January 31 the showing is as follows:

DOMESTIC EXPORTS.

	1906-07	1905-06	*Increase*
Food and animals	$98,332,993	$109,141,748	*$10,808,755
Food, partly prepared	200,863,317	208,162,848	*7,299,531
Raw materials	391,918,256	336,518,095	55,400,161
Partly manufactured	149,269,766	124,318,179	24,951,587
Manufactures	271,573,199	260,996,649	10,576,550
Miscellaneous	3,604,259	2,616,934	987,325
Total domestic	1,115,561,790	1,041,754,453	73,807,337
Foreign mdse exported	14,147,272	14,870,372	*723,100
Total exports	1,129,709,062	1,056,624,825	73,084,237

IMPORTS.

	1906-07	1905-06	*Increase*
Food and animals	$87,902,924	$84,834,382	$2,068,542
Food, partly prepared	81,905,426	79,221,982	2,683,444

Miscellaneous	6,352,971	5,729,580	623,391
Total imports	809,740,176	695,724,641	114,015,535

* Decrease.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Bankruptcy—Chattel Mortgage.

The United States Circuit Court of Appeals for the Second Circuit held, in The Matter of the Marine Construction & Dry Dock Company, that in New York a chattel mortgage given by a corporation engaged in shipbuilding upon its stock of material, which it is authorized to sell and replace for the purposes of its business, provided always that the security of the bonds for the payment of which it was executed should not be in any wise reduced or impaired, was void as against the trustee of the bankrupt mortgagor.

Bankruptcy—Mortgages—Preference.

The case of The Eau Claire National Bank vs. Jackson, Trustee, decided by the Supreme Court of the United States this week, involved a question of preference in bankruptcy. It appeared that in February, 1902, one Young gave mortgages on substantially all his property to secure notes to the bank. In the following June he became a bankrupt. It was contended that the recognition of these mortgages would result in giving the bank a preference over other creditors, and the Supreme Court of Wisconsin rendered a decision against the bank which was affirmed by the Supreme Court at Washington on Monday.

City's Liability—Fire—Streets.

The Kentucky Court of Appeals held, in the case of Hazel vs. City of Owensboro, that a city was not responsible to the owner of a house therein for its destruction by fire on the ground that the street on which the house was situated was negligently allowed by the city to become so out of repair that the hose wagon and engine of the fire department were mired therein, and were thereby delayed in reaching the house in time to save it from loss. The court said that the negligent condition of the street had nothing to do with the origin of the fire, and it could not reasonably be anticipated by the city that any loss by fire would result from the condition of the street.

Insurance—Voluntary Exposure.

The Supreme Court of Michigan held, in the case of Hunt vs. United States Accident Association, that one who, while running bases in a game of indoor baseball, ran against a base and put his hand and foot against a wall to stop himself, whereby his ankle was broken, was not guilty of such "voluntary or unnecessary exposure to danger," as provided against in an accident-insurance policy, as would bar his recovery under such policy. The court said that the term "voluntary exposure to unnecessary danger," as used in an accident policy exempting the insurer from liability for injuries caused by such exposure, means a conscious or intentional exposure involving gross or wanton negligence on the part of the insured.

Interstate Commerce—Rebate.

The United States Circuit Court for the Southern District of New York held, in the case of The United States vs. The Delaware, Lackawanna & Western Railroad Company, that an indictment charging the defendant with the offense of paying rebates in violation of the interstate commerce act, and the acts amending it, particularly the act of 1903 commonly called the Elkins act, will lie with regard to a shipment from New York City to Buffalo where the transportation is partly through the states of New Jersey and Pennsylvania. Such transportation from a point in one state through other states to another point in the original state is, the court said, interstate commerce which Congress may constitutionally regulate. The court further held that the mere fact that a rebate is not paid to the shipper but to somebody else for him is immaterial under the Elkins act; but that if it be in fact a rebate, concession or discrimination whereby property is transported at a less rate than that named in the tariff, the unlawful act is committed.

Trade-Mark—Infringement—Resemblance.

The United States Circuit Court of Appeals for the Seventh Circuit held, in the case of Enoch Morgan & Sons Company vs. Ward, that a manufacturer may put forth his goods in a dress in no element of which size, shape, color, lettering, word or symbol he has an exclusive right of use, and yet if the ensemble has come to be a public guarantee of origin and quality, he may secure protection against the unfair trade of a preying competitor. In such a case, Judge Baker said, a court would look at the matter as a whole, both at the resemblances and the differences, to ascertain whether in view of the differences the resemblances are so marked that the ordinary purchaser would be likely to be deceived. In this case the court held that the word "Sopono" and the picture of a young woman's face in a pan constituted an infringement of "Sapolio" and the pictorial representation adopted by the appellant firm as a trade-mark.

Employer's Liability—Accident—Risk.

The case of The Illinois Central Railroad Company vs. Young, decided by the Kentucky Court of Appeals, arose out of an action by an employee of a railroad company, who was injured by a sliver from a piece of iron striking him in the eye while assisting a boiler maker in chiseling a plug from the end of a flue therein. It was a part of his duty to assist in such work, and the evidence showed that the work was being done in the usual way, and there was no evidence indicating that the boiler maker was guilty of any negligence in the performance of his work. The court held that the injury was one which was liable to happen to one engaged in such employment and for which there could be no recovery. The court said that in contracting to engage in a hazardous business the employee is presumed to have taken into consideration the hazard or risk to which he must expose himself in prosecuting the work, and that an injury received in the line of his employment which is not due to the use of defective tools or machinery, or the improper use of such tools by his superior, but which is the direct result of a danger incident to the nature of the business in which he is engaged, cannot be recovered for.

Building Association—Contract—Loan.

It appeared in the case of Clark, Receiver, vs. Darr et al., recently decided by the Supreme Court of Indiana, that a building association of the state of Minnesota, whose charter and by-laws required that all its members should share equally in its earnings as assets, issued a certificate of stock to a member in Indiana entitling him to said equal privileges, and as part of the same transaction loaned him some money, secured by a mortgage on the stock and on real estate in Indiana, and in violation of its contract with him deposited $100,000 of its securities (including the mortgage, and being practically all of its assets) with an officer of the state of Wisconsin to secure members living in that state, and then became insolvent, so that all of the deposited assets passed into the hands of a Wisconsin receiver, who held and administered them for the sole benefit of the Wisconsin members. The court held that the violation of the contract abrogated it, and that the Wisconsin receiver was entitled to recover from said borrower only the money loaned, with legal interest less the payments made, without reference to the agreement that part of them should be appropriated as dues on stock, part as premium on the loan, and only the remainder as interest.

Association—Partners—Creditors.

The Court of Appeals of the District of Columbia held, in the case of Parker et al. vs. Heald, Executrix, that subscribers to the capital stock of an unincorporated joint-stock association are to be deemed partners and each liable to the creditors of the association, and that where the constitution of such an association provided that holders of capital stock might cancel the same and dividends thereon in purchasing real estate from the association, members availing themselves of this provision did not thereby terminate their liability as partners where they continued to fill the principal offices of the association and to participate in the conduct of its affairs. In the case before the court it appeared that the constitution of such an association provided for capital stock payable in monthly installments until $100 was paid, redeemable when the accrued dividends, which were declared annually, amounted to a like sum, which stock was transferable only on the books of the association, and also for "full-paid interest-bearing stock," for which $100 per share should be paid at time of issue, redeemable at par five years from date of issue, with interest at 6 per cent. per annum, which stock, the constitution expressly provided, should not receive "any dividend in excess of the interest payable thereon," and was transferable by indorsement merely. The court held that a holder of the last-mentioned stock was a creditor, and that on the failure of the association to redeem the same, the holders of the capital stock might be held liable therefor.

BUSINESS NOTES.

English Bank Clearings.

The return of English bank clearings, as reported by the London *Economist*, follows, three figures being omitted in both tables:

London clearings	1906	1905	*Inc.*	*P. ct.*
Town clearings	£11,719,021	£11,355,250	£363,771	3.20
Country clearings	992,313	932,685	59,628	6.39
Total	12,711,334	12,287,935	423,399	3.44
Special days—				
Stock Exchange pay days	2,031,582	2,070,622	†39,040	1.88
Consols settling days	644,534	638,783	5,751	.90
Fourths of the month	524,816	497,070	27,746	5.58
Country clearings	1906	1905	*Inc.*	*P.ct.*
Country c'ks cleared in London	£992,313	£932,685	£59,628	6.40
Manchester	293,616	263,586	30,030	11.38
Liverpool	188,738	203,648	†14,910	7.32
Birmingham	58,622	55,559	3,062	5.51
Newcastle-on-Tyne	54,758	63,466	†8,707	13.72
Bristol	31,025	31,164	†138	.40
Total	1,619,074	1,550,109	68,964	4.40

† Decrease.

Argentine Crops.

A preliminary estimate upon the 1906-07 wheat and flaxseed crops of Argentina was issued on January 21 by the Argentine Ministry of Agriculture. The estimate is based upon threshing-machine returns received up to January 10, and indicates for each crop an abundant harvest. From the data at hand it is estimated that the wheat yield will be 155,000,000 bushels, as compared with final estimates of 135,000,000 bushels in 1905-06 and 154,000,000 bushels in 1904-05. The flaxseed crop is put at 26,000,000 bushels. The final figures for 1905-06 and 1904-05 were respectively 23,000,000 and 29,000,000 bushels. The preliminary official figures on wheat and flaxseed in 1906-07, as compared with the yields as finally estimated for the four preceding years, are given below:

	**Wheat*	†*Flaxseed*
1906-07	155,425,851	25,864,940
1905-06	134,931,354	23,302,540
1904-05	150,744,704	29,132,505
1903-04	129,672,192	36,911,711
1902-03	103,758,807	28,004,683

* Bushels of 60 pounds. † Bushels of 56 pounds.

The Connellsville Coke Supply.

Some people look for exhaustion of the coking coal of the Connellsville regions within twenty-five years. On this interesting question the Connellsville *Courier* says: "The problem of a first-grade coke supply for the iron and steel trade would be serious if it were not for the fact that exhaustive tests have demonstrated that there is another big field of coking coal lying adjacent to the lower Connellsville field, known to the trade as the Greene county field. It covers the greater portion of Greene county, and extends westward almost to Wheeling. The same measures extend northward into Washington county for a limited distance and involve a small area of that county. Tests of the Greene county coal show it to be possessed of the same characteristics as the lower Connellsville coal, the product of which is now generally classed with Connellsville coke. The Greene county field is, in fact, a continuation of the lower Connellsville field westward. The vein grows larger as it goes westward, averaging eight to nine feet in thickness, with a maximum thickness of eleven feet on Dunkard creek. It is to the Greene county field that the iron and steel interests of the country are looking for their future supplies of furnace and foundry fuel."

Consumption of Copper.

The *Engineering and Mining Journal* assumes that the production of copper in the United States in 1906 was 915,000,000 pounds, and that the domestic consumption was 667,179,240 pounds, against 616,125,695 pounds in 1905. It thinks final statistics will show it to have been really a little larger than now figured, probably in the neighborhood of 675,000,000 pounds, which will be about 9.5 per cent. gain over 1905. When all the statistics for 1906 become available, it will be possible to compute the consumption of copper in the United States in 1906 with unusual accuracy, the stocks at the beginning and end of the year having been substantially the same, and chiefly the crude material that is always in transit and process of refining. The domestic consumption increased at a considerably greater rate than the production, but not so much as many have thought. Obviously, when we start with no stocks we cannot consume more copper than we produce. In the case of a single country like the United States, the increased demand for consumption is met by a diminished exportation. As to the whole world, however, when the stocks have gone the consumption cannot be greater than the production. Under such conditions the anxiety of consumers to secure their necessary supply leads them to bid up prices against themselves, as they have done in 1905 and 1906. The actual consumption of copper is always greater than the statistics show, because a rather large amount of manufacturing scrap and old material is constantly coming back into the market. If it were possible to collect statistics for it, the junk business would prove surprising in its magnitude. However, in times of excessively high prices the sources of old material are carefully scoured, and sooner or later this supply diminishes largely, all of which adds to the stringency of conditions until consumers can no longer stand the pace, and stocks begin naturally to accumulate again. As yet there is no evidence of this. Probably there will be no great increase in production in 1907. There will be in 1908. The great question is as to the demand for consumption during the next twelve or fifteen months.

Western Money and Wall Street.

In commenting on the slowness of money to return to the east from the west, the Omaha *Bee* remarks that "New Yorkers fail to understand it and seem to think that they are being deprived of their rights. Wall street is slow to learn that the west now has money of its own, and that the pleasant fiction of a demand for money 'to move the crops' originates annually in Wall street and not in the west, and is used for the purpose of inducing the Treasury Department at Washington to increase its deposits in the national banks of the country. The plan works successfully every fall, and Wall street is almost invariably the principal beneficiary. When the western farmer sells his crop these days he places the money he receives for it in a bank to his credit instead of sending it east to pay the interest on a farm mortgage. When the western farmer finds it necessary for any reason to mortgage his property, he gets the accommodation from his neighbor or from his home bank, without the necessity of applying to the big loan and trust companies of the east that formerly had a monopoly of this business. Western farmers have had little to do with mortgages for the last five years, and in that time have enjoyed a prosperity that has placed them beyond the fear of mortgage burdens for years to come. Western manufactories and enterprises furnish an attractive field for investment, and western money is taking advantage of it. It does not have to go east any more to earn interest or pay interest, as it did in former years. The 'crop-moving' money is not returning from the west because it is owned in the west. Enough of it will be sent to New York to maintain the balances western banks carry in New York, or to profit by high money rates."

Retiring National Bank Circulation.

According to the Washington correspondent of the *Wall Street Journal*, "$16,000,000 of national bank circulation will be retired by 100 national banks between March 15 and August 10. This circulation will be retired at the rate of $3,000,000 a month, in accordance with an agreement made with Secretary Shaw last fall. At that time, recognizing the money stringency existing, Secretary Shaw desired to stimulate circulation. He offered to allow the banks to take out additional circulation to the extent of $16,000,000. The banks could use United States bonds up to secure public deposits, and replace these bonds with state, city, etc., bonds. The condition of acceptance was that the circulation was to be retired between March 15 and August 10. United States bonds were then to displace the bonds of various kinds that he had allowed them to put up as security for public deposits. The circular left it discretionary with the Secretary of the Treasury as to what banks should retire their circulation first. All, of course, desired to keep it out to the last. It was impossible to crowd $16,000,000 in the last month or in any one month, as the law only permits the retirement of $3,000,000 national bank circulation during any one month. Secretary Shaw has devised a plan. All banks that took out more than $250,000 have had their quota cut in two, one half to be retired in March and one-half in August. The banks that took out less than $250,000 have been divided between the other four months, and they too will only retire one-half of their circulation at any one time. When the Aldrich bill becomes a law, raising the limit of retirement to $9,000,000 a month, this plan of Secretary Shaw may be revised by Secretary Cortelyou, and the bulk of the retirement postponed to July and August, or Secretary Cortelyou may, if he deems it prudent, extend it indefinitely. Secretary Shaw, however, has arranged the retirement in the manner stated."

CURRENT BUSINESS NEWS.

Commercial.

Beerbohm has issued a revised statement of the world's wheat crop, which shows a grand total 137,280,000 more than the previous year. The total European crop is about 17,000,000 bushels less than in 1905, and the total crop outside of Europe 157,000,000 bushels more.

The Liverpool Cotton Exchange announced Monday that the semi-annual count of cotton shows total stocks of 977,000 bales, including 894,000 American.

Speaking of the outlook for spring fashions, the *Dry Goods Economist*, in its annual spring-fashion number says: "So far as the fabric manufacturers are concerned, the situation is quite clear. There is no evidence of any marked change from the materials now in vogue. Confirmation is given to the generally held belief that throughout the year light, delicate, chiffon weight and satin-surfaced textiles will prevail. Consequently, manufacturers can go on producing about the same class of goods as they are at present making, with the assurance that such goods are to remain in general use. The chief indication in this direction is a marked increase in the consumption of fabrics, as a result of the voluminous form of make-up require."

While the United States leads the world in the production of iron and steel, the turnover is largely for home consumption. This table shows American exports of iron and steel for the past two years (hardware not included) and the comparative British exports:

	*American**		*British**	
Articles	*Tons,* 1905	*Tons,* 1906	*Tons,* 1905	*Tons,* 1906

* American tons of 2,000 pounds. British tons of 2,240 pounds. † Not given.

In British statistics quantities are given for all exports; in the official returns for the United States quantities are given only for the articles enumerated in the foregoing table. The articles which should fill out the American columns, but for which quantities are not given, are car wheels, castings, safes, stoves and ranges, and all other iron and steel goods, which were exported to the value of $15,706,750 and $18,784,694 in 1905 and 1906 respectively.

J. S. Lawrence, visiting Vermilion, Saskatchewan, says that his farm is the most northerly in the world. He exhibited a sample of No. 1 northern wheat which he grew on his farm at Peace River Crossing. Grain dealers say that for quality this wheat is not surpassed. The surveyed distance from the farm to Vermilion is 283 miles.

Reports to the Bureau of Census show that the three principal starch-manufacturing states, named in order of value of products reported in 1905, were Indiana with $2,048,072, New York with $1,561,913 and Iowa with $1,063,055. The same states led in the production of cornstarch, Indiana with 68,694,922 pounds, valued at $1,733,419; New York with 31,815,436 pounds, valued at $1,336,084, and Iowa with 28,131,080 pounds, valued at $582,050. The leading states in the production of potato starch were Maine with 15,454,787 pounds, valued at $523,200; Minnesota with 6,627,638 pounds, valued at $221,355, and Wisconsin with 4,925,858 pounds, valued at $154,797.

The Census Bureau reports that at the census of 1905 there were 10,051 of the merchants flour and grist mills in the United States. Their total capital was $265,117,434; they employed 39,110 wage earners, paid $19,822,196 in wages, consumed $619,971,161 worth of materials, and manufactured products to the value of $713,033,395. These figures represent an increase, as compared with 1900, the date of the preceding census, of 6.1 per cent. in number of establishments, 40.1 per cent. in capital, 21.4 per cent. in wage earners, 21.7 per cent. in wages, 44.8 per cent. in cost of materials and 42.2 per cent. in value of products. The three leading states in the industry, ranked by value of products for 1905, were Minnesota with $122,059,123, or 17.1 per cent. of the total for the United States; New York with $54,546,435, or 7.6 per cent. of the total, and Kansas with $42,034,019, or 5.9 per cent. of the total. Minneapolis was the leading city in the industry.

The census reports that in 1905 there were 8,926 establishments engaged in the dairying industry with capital of $47,255,556, employing 15,557 persons, paying $8,412,937 in wages, and reporting a cost of materials amounting to $142,920,277 and products valued at $168,182,789. All of these items except the number of establishments show substantial increases during the five years since the census of 1900, that in value of products amounting to $37,399,440, which represents an increase of 28.6 per cent., or over one-fourth. The decrease in the number of establishments was principally due to the consolidation or absorption of smaller creameries into larger plants. Of the total number of establishments in the industry, 74 per cent. were located in six states—New York, Wisconsin, Iowa, Illinois, Minnesota and Pennsylvania. These states reported products valued at $113,799,670, or 67.7 per cent. of the total for the United States. New York ranked first with products valued at $31,047,776, and Wisconsin second with products valued at $29,994,791.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom—The outlook for the crop is unchanged from last week, being generally favorable. France — There are occasional complaints heard regarding the crop outlook, but generally conditions are favorable. Holders are still very firm in their views. Germany—There are complaints of damage to the wheat crop by the January frosts. There is a big demand for coarse grains. Hungary—The weather is cold, but the crop is protected by snow. Roumania and Bulgaria—The weather continues mild and the outlook for the crops is favorable. Russia—Reports from the southwest are more favorable; elsewhere there are occasional complaints, but, on the whole, the outlook is generally favorable. Our agent at Odessa again reports that there are good supplies at interior stations which the high prices will bring forward. Arrivals at the ports, however, at this time are very light. Italy and Spain—The outlook for the crops is generally favorable. North Africa—There are some complaints being received of damage to the crops by the recent storm. Argentina—Owing to the severe drought, it is expected that there will be a large demand for home consumption in corn.

On February 12 the official St. Petersburg Telegraph Agency published the following: "The reports circulated abroad to the effect that Russia has made purchases of grain in foreign countries is utterly devoid of foundation. Such purchases have not taken place, and will not take place. On the contrary, the grain supply necessary for the relief of the distressed districts until May has already been bought in Russia, so that further purchases are unnecessary."

The leather industry contributed $150,000,000 to the foreign commerce of the United States in 1906, against less than $55,000,000 a decade earlier.

Broomhall cables that private advices are that 750,000 acres of wheat in Brandenburg, Saxony and Mecklenburg have been winter-killed. Average area in Germany is given at about 5,000,000 acres. Last year the acreage was 4,808,000, of which 4,358,000 was winter wheat, and in 1905 the winter-wheat acreage was 4,411,000 out of 4,762,000 acres. German crop last year was 144,754,000 bushels, of which 131,204,000 were winter.

Financial.

The securities of the American Malting Company have been stricken from the unlisted department of the Stock Exchange. The securities have been superseded by the issues of the American Malt Corporation, which are on the listed department.

The directors of the International Silver Company have declared a quarterly dividend of 1½ per cent. on its preferred stock, payable April 1. This is an increase of ½ per cent. over the previous quarterly declaration, and places the stock on a 6 per cent. basis. Since January, 1902, the company has been paying dividends on this issue at the rate of 4 per cent. per annum, though it is entitled to 7 per cent. cumulative dividends, and about 20 per cent. back dividends have accrued on the stock. The company recently declared an extra dividend of 1 per cent. in addition to the payment of 1 per cent. for the previous quarter.

The Irving National Exchange Bank, the successor to the New York National Exchange Bank and the Irving National, is sending out a very interesting chart or holiday calendar. A glance at the calendar shows the legal holidays of the various states and territories, also the legal rate of interest as well as the contract rate allowed on loans. One of the most interesting features of the calendar is a map which shows in different colors the states that allow grace on notes and those that do not. The color scheme of the map also permits one to learn at a glance just what states have enacted the negotiable instruments law.

The directors of the Associated Merchants' Company have declared the regular quarterly dividend of 1¾ per cent. and an extra dividend of ½ per cent. on its common stock, payable March 1.

On Tuesday, Hon. Leslie M. Shaw, Secretary of the Treasury, was elected president of the Carnegie Trust Company, 111 Broadway. He will take charge immediately upon his retirement from the cabinet on March 4. The company began business with a capital of $1,000,000 and a surplus of $500,000. The directors decided to increase the capital to $1,500,000 and the surplus to $750,000. The board of directors was increased by the election of Frederick Lewisohn, of Lewisohn Bros.

Transactions in stocks on the New York Stock Exchange are set forth in the following:

February		*Jan. 1 to Feb. 28*	
1907	16,483,152	1907	39,497,949
1906	21,687,579	1906	60,235,447
1905	25,364,446	1905	46,129,984
1904	8,571,484	1904	20,807,225
1903	10,927,401	1903	26,933,790

The following table gives the bond dealings (par value) for February, and from January 1 of this year, as compared with previous years:

February		*Jan. 1 to Feb. 28*	
1907	$31,941,500	1907	$85,207,500
1906	59,854,500	1906	165,181,100
1905	112,922,050	1905	251,511,050
1904	35,994,200	1904	115,920,200
1903	65,627,700	1903	132,455,200

The governing committee of the New York Stock Exchange admitted to the unlisted department on Tuesday two more mining stocks—the Tennessee Copper Company, with a capital of 200,000 shares of $25 par value, and the Utah Copper Company, with a capital of 450,000 shares of $10 par value. They will be the first stocks to take advantage of the amendment to the constitution recently passed allowing shares of par value less than $100 to be traded in on a basis of dollars and cents. The committee also passed a resolution that on March 4 and after Anaconda, par value $25, shall be traded in in dollars and cents instead of on the percentage basis now in practice.

Railroads.

A student of railroad affairs has figured the cost of a 2-cent fare basis in eight western states as follows:

	Mileage	*Loss*
Wisconsin	6,923	$1,967,000
Iowa	9,858	2,784,000
Minnesota	7,741	2,198,000
South Dakota	3,047	392,000
Michigan	8,583	2,317,000
Kansas	8,811	2,445,000
Illinois	11,609	5,258,000
Missouri	7,707	2,114,000
Total	64,279	19,475,000

"The actual loss will not be half that amount. The average rate to-day is less than 2 cents. Special rates can be eliminated considerably, though the railroad will avoid doing so. Besides, a lower general fare will stimulate travel."

The Missouri legislature on Monday finally passed the 2-cent passenger rate law.

According to the *Scientific American*, the total length of railways now working in Mexico is 13,507 miles, and most railways report increases in their traffic returns. With the exception of the opening of the Matamoras branch of the National Railway of Mexico there was but little railroad construction of importance in 1905, but during the last year—1906—there was considerable activity, notably the extension of the Southern Pacific system from Guaymas, in Sonora, south along the Pacific coast to Mazatian and Tepic, and eventually to Guadalajara.

More than 600 cars filled with freight from the congested Great Northern and Northern Pacific railroads arrived in Omaha Monday and Tuesday. They were the first of 8,000 that had been tied up by the blockade. They go west over the Union Pacific at the rate of 500 cars per day until the blockade on the Northern lines is raised. Hundreds are filled with Christmas goods, destined to Puget sound points, and have been held up in Minneapolis and St. Paul for from four to six months.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Governor Hanly, of Indiana, signed on Tuesday the 2-cent fare act. It goes into effect with the publication of the new laws, about May or June.

The Pennsylvania Railroad Company has ordered that the steel ties laid on the road near Johnstown, Pa., the scene of the recent wreck, be taken up and replaced by wooden ties.

A proposition to increase the freight receipts of the railroads entering the Pittsburgh district $25,000,000 a year and to boost the rates on steel and iron is being considered.

Industrial.

On February 6 the Baldwin Locomotive Works completed its thirty-thousandth locomotive. In commenting on the achievement, President Converse said that he had seen the production of 28,000 of the 30,000 locomotives turned out. When President Converse attached himself to the works in 1870 the plant had been in operation thirty-seven years, yet only 2,000 locomotives had been constructed; at that time the management was endeavoring to get the output up to one locomotive a day, and that was accomplished about 1872. Since then the capacity has steadily increased, till now it might be placed at nine locomotives per day. In 1870 the company employed 1,200, whereas it now employs 19,200.

The following table gives the total production of all kinds of pig iron in gross tons (including spiegeleisen and ferro-manganese) in Canada from 1894 to 1906:

1894	44,791	1901	244,976
1895	37,829	1902	319,557
1896	60,030	1903	265,418
1897	53,796	1904	270,942
1898	68,755	1905	468,003
1899	94,077	1906	541,957
1900	86,090		

According to the London *Economist*, much of the unemployment in England in 1906 was self-caused and in no wise to be ascribed to lack of work. The Labor Department reports that the upward tendency of wages, which began in the second half of 1905, continued throughout 1906, with the result that a net increase in weekly wages is recorded for the first time since 1900.

	Workers affected by changes in rates of wages	*Change in weekly wages over preceding year* *Inc.*	*Dec.*
1906*	1,070,415	£55,546	....
1905	664,777	....	£4,087
1904	799,959	....	39,278
1903	892,922	....	38,557
1902	883,191	....	72,865
1901	927,199	....	77,902
1900	1,110,031	206,772	....
1899	1,165,478	89,816	....
1898	1,010,057	80,572	....
1897	582,333	30,494	....
1896	598,865	26,152	....
Total, eleven years	....	489,352	232,689

* Preliminary figures, subject to revision.

In addition, moreover, to higher wages, the working population benefited by the low cost of living that prevailed during the year, and were thus able to increase the consumption of those dutiable articles upon which so much of their wages are spent. The quantities of those articles taken for home consumption for the whole year of 1906, compared with 1905, follow:

	1906	1905	*Increase*
Tea, pounds	270,099,895	259,090,380	11,009,515
Coffee, cwts	262,578	263,649	†1,071
Sugar, cwts	30,562,658	27,709,408	2,853,250
Beer, barrels	33 918,101	33,250,654	667,447
Spirits, gallons	38,674,658	38,587,501	87,007
Tobacco, pounds	93,494,753	88,693,884	4,800,869

† Decrease.

The board of directors of the Pennsylvania lines has authorized an adjustment of the wage scale of station employees east of Pittsburgh and Erie, which indicates an increase of 13.5 per cent. in the wages of about one-half the station employees, dating from February 1. The total number of men affected is 5,471. Their total present pay per month amounts to $275,562. They will enjoy a monthly increase footing up to $37,228. There are 5,523 employees of the grade who are not affected by the change.

Judge E. H. Gary, chairman of the board of directors of the United States Steel Corporation, said Wednesday: "The steel situation is sound from every standpoint. The Steel Corporation is booking more new business than at this time last year. New orders are running about 6,000 tons a day in excess of what they were a year ago. We only wish we had more capacity in order to meet the requirements of consumers more promptly."

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade has improved all around, the impetus being furnished by the return of more favorable weather, the presence of country merchants in leading markets, and the near approach of the Easter holidays. House trade has been more active, and in such lines as cotton dry goods, dress goods and woolens high prices do not deter the placing of large orders. Interior merchants report stocks quite low and money plentiful. Moreover, the recent cold snap permitted dealers in heavy wearing apparel to work off stocks that promised to become burdensome. It is significant that business placed in most lines and sections during the past two months exceeds that of a year ago—a very active period. Opinions as to the outlook for the second half of the year vary, yet it is felt that a pause would not be unwelcome—in fact would have a sobering effect on many lines that are now sold very far ahead and for which heavy contracting still continues. Manufacturing is active the country over and finished lines of iron and steel are as brisk as heretofore, though pig-iron markets are quiet, which is not unreasonable, in view of high prices and the heavy contracts placed earlier in the season. Winter-wheat returns are not so favorable, the Texas crop being practically a failure owing to the ravages of the green bug, while in the central-west belt considerable of the plant looks as if it had been winter-killed. West of the Missouri, however, the crop is in a favorable condition. Shipments of fertilizers to southern points are heavier, and a largely increased acreage will be planted to cotton. Collections are somewhat backward, owing partly to delayed deliveries, partly to the immense volume of business being carried on, and partly to the comparative scarcity of money. Southwestern sections are especially favored, central-western points report more doing, southern advices are of increased activity, except at a few points, and the situation in the northwest, where the stress of weather conditions has been felt most, is improving, though snowfalls in North Dakota within the week threaten another blockade. In the Pacific northwest the lifting of the blockade is only partial, the lumber industry particularly feeling this, and a general scarcity of stocks of goods has resulted in general trade. A possibly extreme example of the effect of the congestion is reported from a western city, which notes the passage through it of large quantities of Christmas goods only this week released from the northern blockade.

Cotton-goods fabrics easily lead in activity of present demand and strength of prices, and sales far ahead—in fact well into 1908—of many products are noted; but finished iron and steel products, knit goods and hosiery, paper, rubber, jewelry, agricultural implements, and hardware manufacturers are sold three to six months ahead. Cities reporting improvement in one or more lines of business during the week are New York, Boston and Baltimore, in the east; Chicago, St. Louis, Kansas City, St. Paul and Minneapolis, in the west; New Orleans and Dallas, at the south, and San Francisco and Spokane, in the farther west.

Reports as to winter-sown grain are not of the best. In the winter-wheat belt east of the Mississippi there is widespread fear of winter killing, and the plant is reported brown. West of the river good reports are general. In Texas the green-bug damage, noted in this column weeks ago, is said to have hurt the plant beyond redemption. Copious rains may help oats in that state and will unquestionably benefit cotton planters. High prices and plowing up of much grain will swell the cotton acreage in Texas. All reports as to fertilizer shipments indicate a large planting of cotton in the rest of the belt.

Pig-iron markets continue quiet. Spot iron commands lower premiums, but no hard and fast rule can be applied to quotations, as especial local conditions, exigency of demand and the like govern prices. Negotiations are pending east and south for foundry iron for distant delivery, but the views of consumers and producers are so dissimilar in character that deals have not been closed. Here and there concessions are granted, but the general tendency of prices displays little change one way or the other. Steel-making irons are scarce, and, in fact, it is estimated that not more than 15,000 to 20,000 tons will be available in the Pittsburgh market this side of July 1. Finished lines are very active and specifications are coming forward at a goodly rate. Sheet and plate mills are still falling behind in deliveries. Structural material is in better demand. A feature of the week is an order for 8,600 tons of bridge material for a Manchurian railway, which about three weeks ago contracted with our mills for 50,000 tons of eighty-pound steel rails. Light steel rails are up $2 a ton. Furnace coke is easier on larger supplies. Demand for anthracite coal is good because of the cold weather, and the situation as regards bituminous is favorable in the east, and contracts now entered into bring higher rates; but in the west supplies are more liberal, hence the market is easier. In copper, considerable business has been placed for delivery in April and May. Premiums are increasing for anything like prompt supplies.

Excellent reports from the manufacturing trade, the scarcity and high price of usable spinning cotton, and predictions of a falling off in receipts—a claimed foreshadowing of this being given in lighter receipts at New Orleans—were the reasons cited for an apparently new bullish movement started in cotton futures this week. Some interesting features as to the scarcity of desirable spinning grades are given in an article in another column. The base price of 11¼ cents for middling uplands at New York is evidently below real selling prices for really desirable cotton, and long-stapled, bright cotton is commanding fancy prices. Spots are 25 points higher on the week, old-crop futures are 30 to 40 points higher, and new crop is 20 to 25 points higher, the old crop having risen nearer to a parity with the immensely high and really abnormal prices asked for next season's deliveries. On the other hand, the prospects of a large acreage and heavy crop for the next season are certainly good. The cotton-goods situation is one of tremendous present strength, print cloths selling at the highest point in a generation, and all other products, from yarn to the finest cloths, selling at almost unremembered prices. The doubtful features are the possibilities as to next season's crop. If it is very large, present high prices for next year's cotton goods may not hold, and experienced men profess themselves at a loss to decide as to future sales and prices.

The grain markets have been irregularly strong, taking the week as a whole. Early, some weakness was shown in wheat on large increases in the amounts on passage, due to large world's exports, and also because of large northwest receipts and fairly good foreign and domestic crop reports. Further heaviness was noted later on, due to predictions of snow in the generally bare winter-wheat belt, but on Thursday reports of poor condition and of no snow in the eastern winter-wheat states and a report of heavy damage to German winter wheat strengthened quotations slightly. Corn was steadily strong despite large interior receipts, and oats are up 1½ cents on bull manipulation of the May option. Provisions eased early on large receipts and lower prices of live hogs, but steadied on more moderate receipts later in the week. Cotton seed is firmer and slightly higher on the week.

The wool market displays marked firmness, and more activity has developed in domestic as well as foreign grades. Although 4,362,642 pounds arrived from Australia within the week, demand for the foreign product has not abated. In this connection it is significant that changes in fashion appear to have developed a greater tendency to use woolen goods and help the sale of foreign wools adapted to this class of fabrics. To meet this competition makers of worsteds are putting up goods of a finer finish, which are meeting with ready sale. Woolen and worsted manufacturers are in the market for large lots of any wool available, pending arrivals of delayed foreign lots. Stocks of domestic wool are very low, and the impression is that every pound will be cleaned up at full prices before the new clip is available. Dealers, however, are still indisposed to pay the high prices asked in the west for the new clip, and it is figured that less than 5 per cent. of the expected clip has been contracted for.

Railroads in states enacting lower passenger-rate fares show a disposition to accept the legislation, pending determination of the effect upon their business. In Wisconsin the railroads have acquiesced in the state commission's recommendation, which is 2½ cents per mile, with a 2-cent rate on 500-mile family mileage, not interchangeable. The latter is considered a tentative arrangement to test results of the 2-cent flat rate.

Speculation in the New York stock market is nervous and irregular, prices having had only a partial recovery from a decided depression due to the revelations made before the Interstate Commerce Commission regarding Union Pacific and Alton affairs. The passage of the Aldrich bill by the Senate, while favorably regarded, had little actual effect. Industrial stocks generally sympathize with the unsteadiness of the railway share list, and bonds are dull and neglected. Foreign exchange is firmer at 4 84.70 for demand sterling.

Cuban sugar production and shipments are very large, and cane-sugar prices are still far below a parity with European beet sugar, but the claim is that the tide has turned, and certainly raw sugar is fractionally higher here than a week ago. Good, steady demand and the stronger tone of raw sugar help refined in tone at least. There has been a very strong market for coffee futures, European covering here and heavy buying by roasting interests being reported. March delivery shows an advance of 70 points, other months 40 to 60 points, and No. 7 Rio is ¼ cent up.

Bank clearings for the week ending February 28 (a holiday period) aggregate $2,562,665,000, a decline of 17.9 per cent. from last week and of 20.6 per cent. from the same week last year. Last week and the week last year were full business weeks. Outside of New York exchange amounts to $1,016,284,000, a decrease of 11 per cent. from last week and of 10.1 per cent. from the corresponding week last year.

Business failures for the week ending February 28 number 194, against 177 last week, 180 in the like week of 1906, 206 in 1905, 195 in 1904 and 171 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending February 28 aggregated 2,857,420 bushels, against 2,932,491 bushels last week, 2,300,476 bushels this week last year, 907,936 bushels in 1905 and 3,234,540 bushels in 1902. For the past thirty-five weeks of the fiscal year the exports are 121,673,528 bushels, against 94,578,672 bushels in 1905-06, 43,417,416 bushels in 1904-05 and 181,429,644 bushels in 1901-02. Corn exports for the week are 3,360,456 bushels, against 1,688,638 bushels last week, 3,767,063 bushels a year ago and 4,171,279 bushels in 1905. For the fiscal year to date the exports are 42,683,611 bushels, against 84,422,718 bushels in 1905-06 and 46,373,231 bushels in 1904-05.

IN CANADA.

There is some complaint as to collections in parts of Canada, but with settled weather, good winter roads and the breaking of the freight blockade in the northwest, the situation has improved. Winter retail trade has turned out better than was hoped for earlier, and a record spring trade is looked for. Canadian jobbers are reported worrying more over the question of slow deliveries than as regards collections. There is general doubt expressed as to whether some cottons and linens will be delivered in time for use. Labor scarcity is still a subject of complaint from manufacturers. Groceries and hardware are more active at Montreal, and dairy products are strong. At Toronto wholesale trade is brisk, hardware is very active, and February building permits are double those of a year ago. Milder weather has helped trade in the northwest, where the freight blockade has been broken. There is still a large quantity of wheat in farmers' hands in the country. Suffering from lack of fuel and mortality of live stock is reported to have been rather exaggerated. Failures for the week number 42, as against 13 last week and 30 in this week a year ago. Clearings for the week aggregate $68,839,000, a decrease of 5.6 per cent. from last week, but a gain of 4.7 per cent. over this week a year ago.

TRADE REPORTS.

In New York a good business has been transacted in nearly all departments of the dry-goods trade. Cotton goods continue to be the feature of the market; sales are large, prices firm and profits good, but there is a scarcity in some lines. Silks are improving, there being a better demand and higher prices. Worsteds are in fair request, underwear is steady and collections good. Prices of raw silk continue to advance, and manufacturers are conservative in their purchases, but, to a certain extent, have been compelled to follow the market. The millinery trade is prosperous and indications point to a good spring business. Commission houses in hosiery and knit goods are all sold up to the full capacity of their mills for six months to come. Jobbers are also busy, and have all the orders they can conveniently handle. Manufacturers of shirts and waists are also sold up for two or three months ahead. General conditions are considered good, but collections are somewhat slow. There has been some inquiry for rags and shoddy, but actual business is limited. Wholesale grocers say sales for the week were satisfactory, but there has been some complaint in deliveries, due to weather conditions. Collections are good. The retail business has been active, and the trade in general is prosperous. Prices of canned vegetables, especially peas and tomatoes, are higher and very firm. Confectionery manufacturers are busy, and collections fair. Butter receipts were light and the market very firm in consequence. Exports of cheese were of fair proportions, but the local demands were up to the average and prices are firm. Eggs advanced a fraction, receipts being only moderate. The strength of the wheat market is being realized by flour dealers, and receivers report satisfactory sales. Stocks in first hands are becoming depleted. Cotton cordage is high and firm in price, there is a steady demand for binder twine, and prices allow a good margin of profit. Business in automobiles is on the increase and prices are high. In freights and charters the enormous amount of goods in transit causes a steady demand for transportation facilities which in some instances cannot be supplied. The gas-fixture trade is necessarily affected by the number of new buildings in course of erection or to be erected and though a falling off of nearly 50 per cent. in the number of building plans filed has taken place this will have a prospective, rather than present, influence on the trade, which so far this year finds business fully up to that of the corresponding period of 1906. The iron and steel market, which opened slow last month was, at its close, very strong. Metals continue firm and consumption very large. Electrical materials are in good demand and machine dealers report an active business. The tobacco trade is at present quiet,

prices unchanged and firm. In the real estate market many sales of property on that portion of Fifth avenue which is becoming a business center have been recorded during the week. Collections in the building materials and lumber trades are slow, and there has been some trouble with renewals of paper. Manufacturers of plumbers' supplies are behind on their orders, though jobbers and retailers find business temporarily slow.

The following telegrams show trade conditions at the cities mentioned for the week ending March 1:

BOSTON.—Demand for dry goods is large and stocks in many lines are scarce. Prices, especially on cotton cloths, are very high. Staple prints are up ½ cent a yard. Ginghams and percales are scarce and prices are steadily advancing. All lines of bleached goods are sold up for months, and spot prices are on a high basis. Dress fabrics are very active and strong, panamas, which are in short supply, leading in demand; voiles, mohairs and broadcloths are selling freely. In men's wear worsteds are in great demand, but woolens do not show much improvement. Trade in men's furnishings, hosiery, underwear, hats and the like is in excellent condition. Furs, owing to cold weather, have been disposed of to a greater extent than was anticipated. Hemlock sole leather, satin and kangaroo grain leathers are more active, and indicate that shoe manufacturers have received some good contracts on fall goods. Supplementary spring business is still disappointing. Hides are quiet, but prices continue unchanged. Shoe shipments are showing up more favorably as compared with the same period last year. Paper is active and firm. In paper stock there is a slightly firmer tone apparent in old papers, owing to smaller collections because of continued bad weather. Old foreign rags are more active, but new stock is listless. In general the movement is not on a particularly large scale. Business in furniture, carpets and upholstery is of fair volume. Indications are for considerable activity in spring trade. Collections are slow. Prices on northern and eastern lumber remain firm, but warmer weather is needed to stimulate building operations. Southern lumber is quiet, owing to delayed shipments. Some lines of western lumber are a little higher. Paints and oils are quiet, with prospects for good demand when weather conditions improve. Hard and soft coal are in fair demand. Retailers are getting many second orders owing to the continued severity of the winter. The wholesale liquor trade report favorable business. Whiskies, beers and ale are in good demand. Leaf-tobacco dealers report fair business, all grades of leaf being in demand at good prices. Manufacturers are fairly busy.

PROVIDENCE.—Business in jewelry is excellent. Cotton goods are scarce and in strong demand at higher prices. Manufacturers of worsted goods are exceedingly busy. Collections are fair.

PORTLAND, ME.—Trade in general is quiet. Collections are fairly good. The rubber goods and boot and shoe trades are having a good volume of business. A good spring trade is predicted.

PHILADELPHIA. — Wool continues quiet and prices unchanged. Manufacturers are busy. Dry-goods jobbers report a good demand and anticipate a large spring trade. Collections are rather draggy. Flour is weak and dull. Chemicals and dyestuffs are in fair demand, with prices firm. Paints and glass are very dull. Lumbermen are still complaining of railroad facilities, but this appears to be their only grievance, as orders are coming in very freely and prices rule strong. Retail yards, however, are not delivering much material, as building operations are slack. Tobacco sells less freely. There are a number of large deals under consideration, but principally for future wants of careful buyers looking ahead. Prices advance steadily, and farmers are asking more. Little is left—probably 15 per cent. of 1906 crop—and that cannot be used until the fall of 1907. Liquor sold better through February than seemed to be the case from day to day, the month's business proving larger than in 1906. Prices were well maintained, there was no speculative features, and production has been conservative. In pig iron the demand for immediate use is greater than the supply, but buying for requirements later in the year is less active. The plate and sheet trades are good, and bar-iron mills are also busy. While some interruption is experienced through insufficient car supply, the open weather until recently has been favorable to coal shipping. Consumers are, in consequence, fairly well supplied, and the market is not quite so strong as it was.

PITTSBURGH.—The pig-iron market is quiet. Most consumers seem to be pretty well filled up, while others are waiting for lower prices for second-half delivery. One sale of Bessemer—500 tons, March delivery—is reported at $23, valley furnace. Other transactions are small and unimportant. Some producers in this district are completely sold up to July 1, and it is estimated that the total of steel-making iron available before that date is about 15,000 to 20,000 tons. These conditions indicate a strong market for second-half delivery, and there are no indications of weakness on present quotations. Finishing mills are as active as ever, with unfilled orders for months ahead and a good buying movement at the present time. Demand for coke is normal, though on larger supply has softened the price of furnace coke, foundry remaining firm at present quotations. Pig iron for spot delivery is quoted as follows at the valley furnaces: Standard Bessemer, $23; chilled basic, $22 to $22.50; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $3.25, and foundry coke at $4 to $4 50, at the ovens. Bessemer billets, Pittsburgh, are quoted nominally at $29.50 to $30, and open-hearth billets, $31 to $32 a ton, though there is none of either on the market, and not likely to be for the next four months.

BUFFALO.—Jobbers in nearly all lines report continued activity. Collections are fully as good as last year's.

BALTIMORE.—The wholesale millinery business, owing to an early Easter, leads other lines for business done in February, the increase ranging from 25 to 40 per cent. Collections are also above the average. In dry goods, notions, boots and shoes and hats, the house trade now on from Georgia, North Carolina and South Carolina has made the month's sales almost equal those of 1906. A largely increased business is anticipated in March. Mill deliveries of paper continue slow, prices are firm but collections are tardy and there is a scarcity of manila. Hardware continues active at firm prices. Woodenware jobbers are busy, with business well up to that of 1906. Collections are fair. In shoes, orders for immediate business is quiet, but spring trade is satisfactory with a good number of orders for future delivery. Salesmen are now starting out for fall business. A very good Easter business is reported in novelties. Leaf tobacco is firm and demand steady. On wholesale drugs collections are slow, with business of fair volume. Cotton mills are well supplied with orders, and outputs are taken for months ahead. Manufacturers of shirts and overalls report a continued increase in business. Deliveries of materials are slow. Dry-goods jobbers report similiar trouble in a variety of lines. Stocks on hand are much below those usually carried at this season. In wholesale jewellery collections are slow and there is very little actual buying. Confectionery manufacturers report a good demand, prices firm and collections satisfactory. There is an increased demand for tin and enameled goods, despite higher prices, and supplies are hard to obtain. Retail trade is fair. Money is somewhat easier.

CINCINNATI.—Business in dry goods and notions continues favorable, and in women's wear spring trade is up to expectations. Traveling men report business good in southern Ohio and Indiana, but in Kentucky trade is somewhat behind. Clothing manufacturers have about shipped spring orders, the volume of which has been large. Trade with southern towns has been affected by floods and rains. In such sections collections are slow and business unsatisfactory. The whiskey market is strong on good demand.

CHICAGO.—Trade conditions have not changed materially, although most lines show improvement. The weather has been more favorable for a larger and more general distribution of goods. Dry-goods jobbers have had a large trade, many merchants being here from all parts of the country, and they make good purchases. For two months trade is ahead of last year by a goodly ratio. While other lines have not shared in the activity that has characterized dry goods, they have done well. The pessimistic talk at the east indulged in by some railroad people is not reflected in the west to any great extent, although it is admitted that there is a disposition to curtail wherever possible, which is expected to have a good effect later. Iron and steel mills are crowded with specifications and new business, which exceed their capacity. Light rails have advanced $2 per ton. Sheets, plates and wire products are having a large sale. There is also a good business in structural steel, with contracts in the market for 15,000 to 20,000 tons for the new Pennsylvania depot, and 12,000 to 15,000 tons for the Northwestern depot. An uneasy feeling prevails in pig iron, with a light business. This, however, is not regarded seriously, considering the large tonnage placed of late. Large buyers who want supplies for the last half demand concessions which most furnacemen are slow to grant. For immediate delivery there is a good call and a firm market. Cars are scarce and deliveries slow. Coal values are easier with larger arrivals of bituminous from Illinois and Indiana, but eastern smokeless is held firmly. Coke is in active request. Lumber has improved, with hardwoods held firmly, owing to light offerings of dry grades. Groceries and paints are having a better call. Butter advanced, but eggs declined 8 cents under heavy receipts. Potatoes advanced early and declined later. Live-stock values are lower. Receipts show fair decreases. Crop reports from central winter-wheat belt are less favorable, and winter killing is feared. West of the Missouri river conditions are mostly good. Money is firm; demand good. Savings deposits are increasing freely, but commercial deposits are decreasing. Currency is moving to the country more freely. Bond business has slightly improved. Wisconsin railroads have adopted a 2-cent rate to keep in line with 2-cent bills passed by adjoining states.

ST. LOUIS.—Sentiment as to present conditions throughout this section of the country is somewhat divided. Country merchants report a good business, and their statements at this season of the year indicate a very healthy condition, which is borne out by the condition of the country banks, but the feeling in financial circles in the larger centers is rather unsettled. Still there are more merchants in the market to-day than has ever before been known at this season of the year, and all of them are buying freely. Jobbers of dry goods, clothing and shoes report business somewhat in excess of last year's, and jobbers of millinery and kindred lines also report an increase. Bankers generally have plenty of money at reasonable rates for merchants and manufacturers. Collections are good for the season. Farmers are becoming more active and report very satisfactory conditions.

KANSAS CITY.—Jobbers in leading lines report a very satisfactory volume of business, with a bright outlook for spring trade. Collections are fair.

WICHITA. — All wholesale dealers report an increased trade over last year. Collections are somewhat better, though still backward.

MILWAUKEE.—Trade is improving. Collections are fair. Wisconsin railroads have acquiesced in the passenger rate recommended by the commission, which is 2½ cents per mile, with a 2-cent rate on 500-mile family mileage, not interchangeable. The latter is considered a tentative arrangement to test the results of a flat 2-cent rate.

SIOUX CITY. — Railroad washouts and floods still continue to affect trade. The weather is colder, with snow. Local retail trade is fair.

DAVENPORT. — A week of warm, spring-like weather has not improved retail trade, which in most every line is quiet. Jobbers have nothing exceptional to report. Manufacturers are busy. Collections are somewhat tardy. Demand for money is good.

ST. PAUL.—Trade conditions continue good in all lines, and sales are in excess of those of last year. Collections are very light, and for the month of February will not average up to the usual low percentage for that month. Last fall's bills in many cases will not be paid till after seeding. Within the last few days more snow has fallen in North Dakota, and another blockade is threatened. Railroad companies find it hopeless trying to locate shipments which have not reached destination. Wholesalers continue making shipments, relying on the railroads' receipts.

MINNEAPOLIS.—Spring trade has suffered a slight setback because of colder weather, yet no complaints are heard regarding the volume, which exceeds that of a year ago in most lines. Flour manufacturing is quiet and trade dull. There is considerable inquiry for lumber, and prices still rule high.

OMAHA.—Wholesalers report trade satisfactory. Retail trade is quiet. Collections are only fair.

LINCOLN.—Grocery and hardware jobbers report good trade, and jobbers of shoes and men's furnishings report good orders for future delivery. Retail trade is quiet.

CHARLESTON.—Trade in all lines shows improvement, and heavy fertilizer shipments continue. Collections are slow.

AUGUSTA.—Trade and collections are fair.

ATLANTA.—Weather conditions have not been favorable and both sales and collections have suffered to some extent, but totals for the month are ahead of last year. Dealers in live stock and kindred lines report considerable decrease in sales from 1905 and 1906.

BIRMINGHAM.—Trade is not quite so brisk and collections are a little slow.

MOBILE.—Jobbers report satisfactory sales, and collections are fair. Retail trade is very quiet. Lumber and naval-stores products are firm.

MONTGOMERY.—Jobbers report business and collections quiet. There is some activity in building.

CHATTANOOGA.—Wholesale and retail trade is very good and collections are fair.

MEMPHIS.—Wholesale business is improving, but the volume is not up to that of previous years. Collections are slow. Owing to the car shortage, cotton is moving very slowly. Factors are not yet making arrangements for next season. Warehouses and railroad platforms are congested.

NASHVILLE. — Wholesale business is satisfactory, with collections fair. Retail trade is quiet owing to unseasonable weather.

LITTLE ROCK.—Spring trade, wholesale and retail, is good. Orders for agricultural implements are unusually heavy. Collections are fairly good. Very little cotton remains unpicked. Inclement weather within the week prevented further arrangements for the new crop.

NEW ORLEANS.—Business in all departments is becoming more active and the outlook for spring trade is improving. Preparations that have been carried on through the winter indicate that there will be a large cotton acreage, and rice farmers are arranging to plant more acreage than last year. A small crevasse occurred on the west bank of the Mississippi river, twenty-five miles below New Orleans. Present information is that the damage is local.

FORT WORTH.—A much better feeling exists owing to recent heavy rains, which were badly needed, yet it is said that the rainfall came too late to benefit oats. Complaints are still reported regarding the injury wrought by green bugs on wheat. Trade is active and collections equal the average.

DALLAS.—Country buyers are in the market in large numbers and are placing liberal orders. Collections are fairly good. Wheat is said to be beyond redemption, and, where possible, the ground will be plowed up and put into cotton.

WACO.—Jobbers report satisfactory business in all lines. Collections are slow. Recent rains will be very beneficial, though it is probable that practically the entire grain crop is a failure.

SAN FRANCISCO.—Favorable weather has given decided impetus to rebuilding, but transportation facilities remain inadequate.

SEATTLE.—Collections have not been so good this week on account of the slow movement of freight, which also caused a falling off in trade.

SPOKANE.—Freight is being received in considerable quantities and stocks are being replenished. Collections are still slow. A large amount of building is planned for this year.

TACOMA.—Lumber mills are seriously handicapped by the car shortage. Trade shows renewed activity, but stocks are light, awaiting overdue deliveries.

PORTLAND, ORE.—Trade conditions are satisfactory to jobbers and retailers. Manufacturers still complain of being hampered by the car shortage. Collections are only fair.

TORONTO. — Wholesale and retail trade continues brisk. Travelers out with summer and fall lines report good trade, and orders are heavy and for well-assorted lots. The continuous cold weather is causing a good movement in winter goods, and there is still a fair business in the way of sorting orders. All lines of groceries are fairly active. Canned goods hold very firm on light stocks in nearly all lines. There is a shortage in dried fruits. Hardware is very active. Building permits issued here during the past month were nearly twice as heavy as those for the same period last year, and building hardware has begun to be active. General industrial conditions continue satisfactory. A shortage of labor is still affecting factory output. Collections are now generally fair to good. From the west they are not just what they should be. This is partly due to the traffic blockade, and perhaps, to some extent, to the fact that there is still here and there some land speculation going on. Dairy produce is active and firm. Hogs hold firm, as do provisions. Wool is quiet and unchanged. There is a firmer tone to hide prices.

MONTREAL.—Unusually severe winter weather was the cause of slow collections early in February,

but since retail trade has improved, collections have looked up. Dry-goods jobbers are more worried about slow deliveries than about slow payments. In cottons, prints and linens the effect of these slow deliveries will be felt throughout the season. There is considerable fear, too, that certain lines of goods from foreign markets will be scarce. It is recognized that the demand for dry goods and general lines is the heaviest that has ever been known in this country. This may be understood when it is remembered that the foreign immigration entering the country last year totaled 1½ per cent. of the entire population. The grocery trade here has been more active during the past week. There is already considerable activity in building hardware, and the demand for iron and steel is brisk. Prices are firm. Country retail trade is showing a fairly good tone. Butter is firm, with stocks here light. Cheese is quiet but firm. Grain prices are firm, with demand good. Hides are fairly active, but the quality is poor. Wool is dull.

VANCOUVER-VICTORIA.—Trade is steady. Retail and wholesale stocks are moving fairly well, and collections are satisfactory. With the arrival of milder weather local industries have taken on a busier tone. The shortage of labor is still felt. The reduction in passenger rates from Great Britain will have the effect of encouraging immigration.

WINNIPEG.—Milder weather has had a very enlivening effect upon general trade here. Trains are now running regularly, and merchandise is moving in all parts of the country. Great activity is everywhere being displayed in the matter of preparations for spring business. Travelers are still sending in large orders. Where changes in prices are noted they are in an upward direction. Collections continue somewhat on the slow side, but there is still much grain in the hands of farmers, and when this comes to the markets money will be freer.

Money Market.

According to the estimates the New York banks lost this week about $2,500,000 through the Treasury operations and the interior movement. In a sentimental way the passage of the Aldrich bill by the Senate on last Tuesday had a good influence, although it is not expected that the adoption of the measure and the possible increase in the government deposits in national banks, which might be looked for in consequence thereof, will have any decided effect on the New York loan market. There continues to be a general expectation that the spring demands for money at the interior will this year be rather larger than ordinary. The preparations for March 1 interest and dividend payments seemed, however, to be chiefly responsible for the hardening which was noted this week in rates of interest for both call and time loans. Call money ran up from 4½ per cent. to 5½@6 per cent., and time loans for both short and long periods were held at about one-quarter per cent. higher than heretofore, there being, however, a very good supply of such funds in the market. There is a fair amount of business doing in commercial paper, but the buying demand comes altogether from out of town:

New York Banks.

In last Saturday's Clearing House statement the banks appear to have lost $3,252,600 cash for the week, being about a million in excess of the estimated actual decrease, this result being probably due to the fact that the withdrawals of funds were mainly in the early days of the week. There was, however, a reduction of $8,600,600 in the loans, a reflection, it would seem, of the recent stock market liquidation. The decrease of $12,524,500 in deposits agreed with the changes in cash and loans just mentioned, and the reserve requirements were consequently $3,131,125 smaller, so that the loss shown in the surplus reserve, of $121,475, was only a nominal one. The figures of the statement compare as follows with those of the preceding week:

	February 23	February 16	Changes
Loans	$1,083,460,400	$1,092,061,000	D. $8,600,600
Specie	190,145,800	192,167,500	D. 2,021,700
Legal tenders	75,419,200	76,650,100	D. 1,230,900
Deposits	*1,045,021,700	1,057,546,200	D. 12,524,500
Circulation	53,004,500	53,194,300	D. 189,800
Total reserve	265,565,000	268,817,600	D. 3,252,600
Reserve required	261,255,425	264,386,550	D. 3,131,125
Surplus reserve	4,309,575	4,431,050	D. 121,475

The following table shows the bank holdings on the following dates:

	Feb. 23, 1907	Feb. 24, 1906	Feb. 25, 1905
Loans	$1,083,460,400	$1,049,301,800	$1,121,281,400
Specie	190,145,830	185,637,200	223,170,400

Deposits	*1,045,021,700	1,042,298,700	1,179,824,900
Circulation	53,004,500	50,787,200	42,829,800
Total reserve	265,565,000	265,720,420	309,602,300
Reserve required	261,255,425	260,574,675	294,956,225
Surplus reserve	4,309,575	5,125,725	14,646,075

* United States deposits included $14,356,600.

Foreign Exchange.

Throughout the week the foreign exchange market was dull but showed a tendency to work higher. The inquiry was merely fair, but the supply of commercial bills was not particularly large, notwithstanding reports of further extensive buying of grain for export. There were no evidences of offerings of finance bills, although money was somewhat higher in the New York market, the indications being that the continued firmness of money at London is for the moment a bar to any transactions of this character. Posted rates remain unchanged at 4.81½@4.85½, but demand sterling rose gradually from around 4.84.60 to 4.84.75, with a corresponding advance in the actual rates for long sterling and continental bills. At the end of the week the market was dull and steady without any further changes of consequence.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Feb. 23	Feb. 25	Feb. 26	Feb. 27	Feb. 28	Mar. 1
4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.84.60 @ 4.84.70	4.84.60 @ 4.84.70	4.84.60 @ 4.84.75	4.84.60 @ 4.84.70	4.84.65 @ 4.84.75	4.84.60 @ 4.84.70

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.80.05 @ 4.80.15	4.80.00 @ 4.80.20	4.80.10 @ 4.80.25	4.80.00 @ 4.80.25	4.80.30 @ 4.80.35	4.80.30 @ 4.80.40

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.85.35@4.85.40; commercial bills, 4.79¾@4.80½; francs, 5.23¾ less 3-32@5.21¼ less 3-64; reichsmarks, 93⅝@94 7-16.

The bank of England's discount rate is unchanged at 5 per cent. Its weekly return showed a gain of £53,385 in gold, and the proportion of its reserve to liability suffered another decrease, falling from 48 per cent. to 47.32 per cent. The other changes were unimportant, though the borrowings by the market from the bank appear to have increased to the extent of some £700,000. In the London open market call money remains firm at 4@4½ per cent., and discount is 4¾@4⅞ per cent. The Bank of France reports a loss of 8,550,000 francs in its gold and an increase of 236,400,000 francs in loans, together with 182,350,000 francs expansion in the note circulation. Its rate is still 3 per cent, the Paris market quotation for discount being 2⅞ per cent. At Berlin the bank rate is 6 per cent. and the market 4⅜ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending February 28 shows an aggregate of $2,562,665,000, as against $3,124,182,000 last week and $3,229,535,000 in the corresponding week last year. Canadian clearings for the week aggregate $68,839,000, as against $72,970,000 last week and $65,680,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	February 28	Inc.	Dec.	February 21

New York Securities Market.

The testimony given before the United States Interstate Commerce Commission by the president of the Union Pacific Railway and other officers and financiers regarding the affairs of that company and of the Chicago & Alton, reference to which is made in another column, resulted in more or less demoralization in this week's stock market. Wall street seems to rest under the apprehension that the disclosures are liable to result in litigation directed against some very eminent factors in the railroad world, on the part of both the government and perhaps of individual interests. It is also realized that the object of the commission in procuring testimony which would go to show that gross overcapitalization has been practiced has for its object the lowering of rates through the application of the amended interstate commerce laws. These circumstances are, of course, calculated to create a good deal of uneasiness, and apparently caused a withdrawal of the support which the market up to this time has received whenever extreme weakness threatened to develop. The liquidation of weak accounts at the declines was also quite heavy, and though the short interest was manifestly greatly enlarged, the market did not seem to become oversold to such a degree that a sustained rally could be engineered. The week was not without its favorable features. The passage of the so-called Aldrich bill by the United States Senate last Tuesday fell rather flat and did not produce more than a temporary rally. Money rates advanced toward the end of the week, as they would naturally do in view of the March 1 disbursements, but this circumstance was regarded as of minor importance, the street being apparently convinced that while rates for loans will remain, on the whole, firm, there is little prospect of any decided pinch in the monetary situation. Foreign exchange has hardened somewhat, but the fact that large foreign buying of grain is reported tended to deprive this of any significance, and leaves it still an open question whether the American banking interests will not be able to draw gold from Europe whenever such a course seems advisable. The foreign interest in our securities was of a limited kind, and the Union Pacific developments were, of course, calculated to create adverse feeling toward Americans on the other side.

In the actual trading the bearish attacks, liquidation and resulting declines did not center, as might be expected, in the so-called Harriman stocks. Union Pacific and Southern Pacific were weak and sold off, but not more than other important trading stocks which are not directly affected in any degree by the pending disclosures. Reading bore the brunt of much of the bear activity, though it extended impartially to such stocks as St. Paul, Baltimore & Ohio, Louisville, Great Northern preferred, Northern Pacific and others of the same grade. In regard to Reading there were many rumors of a prospective short-term note issue, and it may be mentioned that on Friday, after the stock had sold down to 113⅛, it rallied sharply to 115⅞. In the rally which occurred on Thursday, it may be noted that the Hill stocks—Great Northern preferred and Northern Pacific—recovered with comparative ease, although they, as well as others of their class, have this week touched lower figures than have been seen for them for a long time. Special attention was given to the action of the Gould group. Missouri Pacific and its companions were again very heavy and made marked declines, there being accompanying reports of a possible suspension of dividends. The same argument was also used with much effect on Southern Railway preferred, which at one time sold down to 74, but had a rather sensational rally, due to the fact that the enforced liquidation had been completed and a large short interest was

presumably unearthed. The industrial list also suffered in sympathy with the action of the general market, despite a feeling in many quarters that stocks of this class are in many cases entitled to do better in view of the fact that they are not in any degree subjected to the same adverse influences which now affect different railroad properties. The Steel stocks were, it is true, rather steady without developing much activity, but Amalgamated Copper was lower on large transactions, and some notable breaks occurred in industrial specialties, especially in Colorado Fuel & Iron.

Total	5,586,000	5,580,000	5,323,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	272,511	297,496	161,933
Season	11,161,499	10,560,952	8,816,458

Boston Shoe and Leather Market.

Hemlock sole leather sells more freely and union backs are in good request. Satins and kangaroo grain leather are more active. Manufacturers are apparently catching up with orders for black splits. Hides are quiet, with prices unchanged. Wholesalers are manifesting more interest in fall lines, and some good contracts have been placed. Supplementary orders for spring goods are still disappointing. Shipments this week exceed those of the same week last year. The *Shoe and Leather Reporter's* figures are as follows: Last week, 93,121 cases; preceding week, 101,090; last year, 91,405; total for 1907, 727,190; total for 1906, 793,229; decrease, 66,039.

Boston Wool Market.

The wool market continues to display great firmness, and during the past few days more activity has been noted, both in foreign and domestic grades. Contrary to expectations, the overdue arrival of the steamer Ashanti, with 4,362,642 pounds of wool direct from Australia, caused no cessation in demand for foreign wools, and both woolen and worsted manufacturers have been in the market for good-sized lots of any wool available. Other lots of foreign wool are still much delayed, and while some of the wool from the Ashanti will come on the open market, there will probably be a sharp demand for it, and as stocks of domestic wool are very small, the dealers are confident that every pound will be cleaned up at full prices before the new clip becomes available. Dealers are still unwilling to pay the high prices asked in the west, so that contracting is practically at a standstill, the total amount thus far contracted being estimated at less than 5 per cent. of the expected clip. In Arizona the first shearing is over, and sales have been made there at 20@21 cents for the best clips and 16@17 cents for heavy. Among the sales in the local market during the past week, domestic grades, have been staple territory at 24 cents, fine and fine medium Idaho and Montana clothing at 22@23 cents, Ohio three-eighths fleeces at 34½ cents, XX Ohio at 34½ cents, unmerchantable clothing at 29 cents, fine unwashed delaine at 26½ cents, unwashed delaine at 29@31 cents, fall Texas at 23 cents, fall California scoured at 57@59 cents and staple Oregon at 23 cents. Australian wool, 50s to 64s, having sold freely, 64s bringing 42@42½ cents, 70s 43@43½ cents and crossbreds 41@43 cents. Choice New Zealand crossbreds sold at 45 cents.

BUSINESS MORTALITY IN AMERICA.

Commenting on an article on the Causes of Failure, published in BRADSTREET'S on January 19, the London *Financial Times* of February 14 says:

"It is not surprising to learn, from a very useful report received from the well-known Bradstreet Company of New York, that the wonderful wave of prosperity which has swept over the United States of late has been accompanied by a considerable reduction in the rate of 'business mortality'—to quote the apt term adopted by the authors for the work passing through the courts of bankruptcy. Last year only 9,385 individuals, firms and corporations proved either their inability or their indisposition—the alternative has a charmingly humorous sound—to pay their debts, a decrease of 5.9 per cent. on the number for 1905, which, we are reminded, displayed a decline of 4.3 per cent. on that for 1904; and the figures now published are the lowest on record for twenty-three years. This is exceedingly satisfactory, so far as it goes, but it is somewhat disquieting, if not very surprising, to learn that the liabilities involved in the failures, representing not far short of £32,000,000, were heavier to the extent of 44 per cent. than those of the preceding twelvemonth. Compared with the very favorable record of 1902 the deficiencies were greater by as much as 20 per cent., and the explanation is to be found in the fact that 1906 saw 'a few large banking suspensions'—another way, we take it, of saying that some financial institutions of the second class got involved in reckless speculation in Wall street and burnt their fingers. The conclusions to which the figures point are, of course, very obvious. Leaving the misfortunes of 'frenzied financiers' on one side, it is clear that business has been good for some years. Then there has been more conservatism in the granting of credit, which has naturally been rewarded by a reduction in the number of bankruptcy petitions. Finally, it is assumed that in a great measure it is true that with improved trade, and with greater caution on the part of lending institutions, the trading community has reached 'a point where the commercial death rate has been permanently lowered, just as the actual rate of mortality among human beings has fallen off.' It is argued very reasonably that if the spread of better medical knowledge and improvement in sanitary matters have reduced the death rate per thousand, it cannot be too much to claim that similar agencies of prevention and control now exerting their effects on commercial life have surrounded the general transaction of business with healthier conditions that seem likely to endure. Looking back over a series of years, there is no lack of evidence in support of this contention. Taking the number of firms in business and the total failures, we find that the 'commercial death rate,' which was as high as 1.46 in 1893, has shown a falling away, until last year it was no more than .76 per cent. The republic has grown in population and wealth, and thus has kept pace with what appeared on the surface to be a dangerous growth of competition. One of the most interesting features of the report before us is the catalogue of lessons which the authors, with their unrivaled experience, have gleaned from their investigations. We are told that normally about four-fifths of all bankruptcies are consequences of the faults of those failing, the remainder being brought about by influences beyond their control. The shortcomings of the former class are enumerated as follows: Incompetence (irrespective of other causes); inexperience (without other incompetence); lack of capital; unwise granting of credits; speculation (outside regular business); neglect of business (due to doubtful habits); personal extravagance, and fraudulent disposition of property. Traders on both sides of the Atlantic would do well to make a note of these finger posts pointing the way to the bankruptcy court."

BRAZIL'S NEW TARIFF LAW.

In a report to the Bureau of Manufactures, George A. Anderson, the American consul-general at Rio Janeiro, has furnished an outline of the new tariff law which was passed at a recent session of the Brazilian Congress. All the preferential rates of duty which have previously existed, he said, were continued.

The law is important to the United States chiefly in the fact that it continues in effect until a new law is passed all the preferential concessions in favor of certain products of the United States which were authorized in the budget act of a year ago and given effect by presidential decree of June 30, 1906. By the provisions of this year's budget act there is to be no break in the course of these preferentials. Under the provisions of the new act 20 per cent. preferential reduction is made in the customs duty upon the following products from the United States:

Wheat-flour, condensed milk; manufactures of rubber under article 1033 of the tariff act, including rubber and celluloid; guttapercha, basins, funnels, capsules and bottles; walking sticks, canes, whips, etc.; pouches, dolls, toys of all kinds; buttons, saws, engine packing, combs, rulers, penholders, fans, belts, braces, garters, cords, tapes, dentists' rubber, sticks, tubes and branches for flowers; rubber sheeting, tubes, threads, sheets and mats, all of rubber; inks, under article 173 of the tariff act, except writing inks, but including marking inks, designers' inks, drawing inks and other liquid inks, and printers' inks in tubes or cylinders; paints and varnishes; typewriters, ice boxes, pianos, scales, windmills and watches and clocks.

These preferentials in favor of American products over all others are continued, and by the terms of the law just passed the item of typewriters is defined to include linotypes and cash registers, thus bringing these two American products within the scope of the 20 per cent. preferentials.

The only feature of the law unfavorable to American interests seems to be in the increase in the duty on grape juice, as a result of which the duty now charged exceeds considerably 100 per cent. ad valorem. American grape juice has had and may still be able to maintain the chief hold on the Brazilian market in such goods. The increase in the duty charged is made for the benefit of the small grape-juice preserving factory in Sao Paulo.

The new law provides that motor cars and motor boats used for industrial purposes shall be admitted at 5 per cent. ad valorem.

One of the most interesting features of the act is a provision which allows free admission for such periods as may be judged necessary of all products which may come into competition with goods manufactured in Brazil by "trusts," the act employing the English word.

In line with its policy of protecting and aiding new industries, the government in the new law especially aids agriculture. Agricultural machinery, machinery for factories of a sort to encourage agriculture (like creameries) and sugar-making machinery are admitted on the payment of 5 per cent. ad valorem in lieu of all charges. Instruments and machinery for the more modern culture of coffee, cacao, tobacco, cotton and almost all agricultural products are admitted free. Locomotives and most industrial machinery are held in the 5 per cent. class.

FACTS ABOUT LEAD PENCILS.

According to the *Scientific American*, "it is difficult to determine the exact period in which 'black lead' was first utilized as an instrument for writing or drawing, as it has been confused with other mineral bodies to which it bears no relation. The ancients used lead, but the metal was formed into flat plates, and the edges of these plates used to make the mark. If an ornamental design was desired, the transcriber drew parallel lines and traced their illuminated designs, usually with a hard point, but also with soft lead. That lead was known to the ancients is also proved by the fact that it is mentioned in the book of Job.

"During the year 1615 there was a description of the black lead pencil written by Conrad Gesner. He says that pieces of plumbago were fastened in a wooden handle, and a mixture of fossil substance, sometimes covered with wood, was used for writing and drawing. About half a century later a very good account of this mineral was given, and it was then used in Italy for drawing and mixed with clay for manufacturing crucibles. We are informed in Beckman's 'History of Inventions' that the pencils first used in Italy for drawing were composed of a mixture of lead and tin, nothing more than pewter. This pencil was called a stile. Michael Angelo mentions this stile, and, in fact, it seems that such pencils were long used in common over the whole continent of Europe. At this period the name plumbago or graphite was not in use, but instead the name molybdena or molybdoids, which is now applied to an entirely different mineral.

"Graphite or black lead is formed in the primary rocks. In the United States it occurs in felspar and quartz, in Great Britain in greenstone rock and gneiss, and in Norway in quartz. The mine at Borrowdale, England, has supplied some of the finest black lead in the world, but the quantity varies, owing to the irregularity with which the mineral occurs.

"The Jews were for a while the only manufacturers of pencils. It required great skill to perfect the manufacture, according to the degree of hardness or softness required. Of recent years the manufacture of pencils has increased to such an extent that the price of these articles has decreased proportionately. Graphite and pure clay are combined and used in the manufacture of artificial black lead pencils, and, on the other hand, the greatest perfection is attained in the making of the higher-class pencils. Graphite is exposed to heat to acquire firmness and brilliancy of color. Sulphur is also used to secure a more perfect color."

SOUTH AMERICA'S WATER POWER.

The *Review of Reviews* declares that "the future of manufacturing in South America is undoubtedly dependent upon the tremendous water power so lavishly distributed by nature. Upon the Andean slopes, in the virgin wilds of the Guianas, and throughout the extensive mountain system of central Brazil exist countless streams whose potentiality will yet minister to the needs of a vast and ever-increasing population. No estimate could be given of the energies now going to waste upon the eastern escarpments of the Andes. In regions peculiarly adapted to settlers from the manufacturing nations of Europe, and soon to be made accessible by the various waterways connecting either with the Parana to the south, or with the gigantic Amazon to the north, regions incalculably rich in forest and mineral resources, exist ideal sites for the industrial towns and cities that may yet arise.

"Among the better-known waterfalls of the interior are the cataracts of the upper Orinoco, the falls of the Sao Francisco, the remarkable series of rapids on the Madeira river, and the stupendous cataract of Guayra, between Brazil and Paraguay. But greater than these, and rivaling even Niagara and the Victoria of Africa, are the falls of Iguazu, upon the river of the same name, a few miles above its junction with the Paraguay. This magnificent fall, as yet scarcely accessible to the tourist, and almost unknown outside of the La Plata country, is undoubtedly the greatest source of power upon the entire continent—a power that if converted into electrical energy could supply the industries, light and traction of a vast city. The city, of course, has yet to appear, but its advent is assured even though the promising iron ores of Paraguay should never be developed. But bearing in mind the new electrical process of smelting now successfully introduced into Germany, one can easily imagine the establishment of a great industry in this southern wilderness in iron smelting alone, a tropical Pittsburgh, lacking only the smoke and cloudy skies of our northern city.

"The best examples of applied water power as yet are furnished by Brazil and Peru. In Brazil both Rio Janeiro and Sao Paula are utilizing this form of power for the electric railroads and lighting, as well as in local factories, and new concessions are being applied for. Lima, the capital of Peru, has been particularly enterprising in this respect, and has so much power at her command that her industries will soon be independent of coal or other fuels. Chile has planned similar installations for the supply of Valparaiso and Santiago, and even Bogota, the hermit city, has cast envious eyes upon her beautiful fall of Tequendama."

OUR STOCK OF GOLD.

Ellis H. Roberts, ex-Treasurer of the United States, writing in *Moody's Magazine*, says: "Investigation determines the volume of precious metals used in the arts. It was $28,655,963 in 1904, the last year reported. The accuracy of the statements of exports and imports has been assailed as to details, but they stand as to substance, and an excess of imports of $5,666,335 is shown in the past six years. The Treasury holdings are visible and tangible, and were on January 2, 1907, in the special reserve, $150,000,000; held against certificates, $639,114,869, and in the general fund, $105,279,951, besides $58,719,670 included in the certificates. The actual gold coin and bullion in the government vaults are, then, $894,394,320, or not much less than $900,000,000. The banks, state and national, hold $187,281,496 in gold, of which $66,515,500 is in the Clearing House vaults.

"Thus, under the actual thumb and forefinger of the tellers, the reports show of the yellow metal nearly $1,100,000,000. Question can arise over the location of $487,000,000, which is $190,000,000 less than the sum brought into doubt by Mr. Allen. Let us see what part of our stock of gold can be traced here at home and what is flowing away from this country.

"What emigrants take out it is hard to say, nor can the amount brought in by immigrants be exactly told; both currents are in constant flow. But the aliens who plan to send money to their old homes, whether to fetch relatives or for their own use, are always hoarding for those ends. The process is continuous shipment and hoarding alternate. The claim is that Italians send home at least every year $100,000,000. On that basis at least a tenth of that amount must be in reserve for the purpose. But, besides, the Chinese and Japanese are charged with sending home twice as much every year. If half the sum be conceded, the same need of getting ready to carry away will prevail. Against these classes of exports the hoardings are large, and the alien instinct will put as much as practicable into yellow coin.

"The miners and smelters must always have large volumes of gold in their business. They turn ore into bullion as quickly as they can, but time does not stop for them. Their capital not only, but their earnings, too, must rest for longer or shorter periods in metal, and their transactions mount to high figures. Such sums can hardly be less on the average than 25 per cent. of the year's product of $96,000,000, that is proximately $24,000,000.

"The current cash of traders, wholesale and retail, all over the land may be reckoned at a tremendous aggregate. Most of it is in silver and paper, but some gold will glitter in many of the tills. How often only a single coin and how often a score will be found, the cashiers have not put on record. But he who shuts his eyes to these resources cannot claim to know the whole secret of our money. Who will reckon them at less than $15,000,000 for the whole United States?

"Coin collectors put away more gold than would be believed without inquiry. This drain is constant and permanent and grows. He will be bold who will place such withdrawal below $10,000,000. If private souvenirs are reckoned, that will be a moderate estimate for both classes. The eye need not be very keen to discern that in

such quarters gold is kept in hand to the extent of more than $75,000,000 or $80,000,000.

"No one can look into the pockets and treasure boxes of the people. Thrift does not tell its secrets, and neighbor cannot guess what is put away in a corner in the next house. While the estimate that an average of $5 in gold is held by each person of our population is perhaps excessive, it is clear that 85,249,000 people, prosperous beyond parallel, are not without their share of the yellow metal in their own possession. Grant to each family an average of only $10 in gold, and $213,120,000 will be accounted for; but many experts reckon twice as much at least in the private hoards of families.

"These figures leave perhaps $200,000,000 of our vast stock of gold—not more—to be traced. It may have gone abroad unreported. In no other land is so small a percentage of the precious metal outside of known depositories. Beyond the official statistics fancy may busy itself, and estimates and guesses may vary. But the best test of the number of birds in the bush is the flock that the hunter brings down or starts into sight. Into our actual visible circulation gold in coin and certificates increased from December 1, 1905, to January 1, 1907, by $132,751,902—about one-third of the world's total product of the metal for the year."

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

SATURDAY, MARCH 9, 1907.

Plans are now in progress to make the Arbitration and Peace Congress, to be held in New York next month, specially representative and impressive. The congress will open in Carnegie Hall on April 14 and will continue in session until the evening of April 17. It will include delegates from the principal European countries as well as from American states. Two members of the Cabinet will be speakers at the congress, and the governor of the state and other distinguished citizens of the United States and of other countries represented will make addresses. At one meeting international views of the peace movement will be the feature; at another woman's influence will be specially recognized. One session will be held for the special benefit of young people, particularly the children of the elementary and high schools, and still another will take its character from the attendance of representatives of colleges and universities, while the relation of wage earners to the peace movement will be considered at a meeting held in another place. Presidents Roosevelt and Diaz and Lord Grey, the Governor-General of Canada, have been invited to speak at a public dinner which will close the congress. Taken altogether, the occasion should be an imposing and memorable one.

Tariff relations with France and Germany have engaged much of the attention of the State Department lately. Just at present the outlook for a tariff agreement with either of those countries is not of the most promising kind. Petitions against reductions of duty on meat products have been made by several interested associations in Germany, such, for example, as the German Butchers' Association, and it seems likely that any move in that direction will meet with determined opposition. In France the Parliamentary Commission, which has been considering the question of revising the schedules, has decided to maintain the maximum and minimum system, with the former double the latter, for the purpose of forcing concessions from countries like the United States which have not entered into reciprocal trade agreements. This commission, it appears, has been deluged with demands from French manufacturers for an increase of the minimum rates. An illustration of the current feeling is found in the introduction of a bill increasing the duties on cotton-seed and other vegetable oils, in which the United States is interested. The State Department is hampered in dealing with the situation by the uncertainty which prevails as to the attitude of the Senate in relation to reciprocity treaties.

As was the case in December and January, the Treasury operations for February left a substantial balance on the side of the receipts. These amounted to $53,925,426, while the expenditures amounted to $45,729,000, leaving a surplus of over $8,190,000 for the month. The receipts for the eight months ending with February amounted to $437,624,114 and the expenditures to $396,966,450, so that there was an excess of receipts for the portion of the fiscal year which had elapsed at the end of February of over $40,600,000. At this time last year the surplus amounted to only a little over $1,100,000, and at the corresponding date the year before there was an excess of expenditures over receipts amounting to over $25,400,000. Customs receipts continue to display their preponderance and their remarkable increment, for their total showed a gain of not far from $4,000,000 as compared with that for February of last year.

By proclamations issued on Saturday and made public on Monday, President Roosevelt added 17,000,000 acres to the forest reserves of the United States. In all, thirty-two forest reservations are created or increased by these proclamations. In a memorandum made public with them, the President says that the reserves were determined upon and the preparation of the necessary papers ordered some months ago—in two-thirds of the cases some years ago. In all but a few cases long-continued and detailed field examinations have been made, and in the remainder examinations amply sufficient, in the view of the President, to sustain the action taken. When the proclamations came before him the question was presented whether he should refrain from acting under the existing law, because there was under consideration by Congress a proposal to change the law so as to require action by that body upon the establishing of forest reserves. This question was resolved by Mr. Roosevelt in the negative, on the ground that failure on his part to sign the proclamations would mean that immense tracts of valuable timber would fall into the hands of the lumber interests before Congress would have an opportunity to act, whereas the creation of reserves meant that the timber would be kept in the interest of the home maker. The President's decision of the question was characteristic, but it will be generally approved.

Announcements are forthcoming this week that the Japanese government has concluded negotiations with prominent London bankers whereby an issue of £23,000,000 5 per cent. forty-year bonds, redeemable within fifteen years, will be brought out at a price to the public of around par. This issue, it is also understood, is for the purpose of retiring the £20,000,000 of 6 per cent. bonds which were issued in two series of £10,000,000 each in 1904 and 1905 respectively, the same being by their terms redeemable after April, 1907. It had, of course, been expected all along that the Japanese government would exercise the right of redemption in respect to these securities as soon as practicable, but some surprise was expressed at the fact that instead of putting out a 4 per cent. bond for the purpose, it has been deemed necessary to make the rate upon the new loan as high as 5 per cent. In the present condition of the world's money and investment markets, it is evident, however, that there was no alternative, and that the Japanese treasury officials and their financial advisers in Europe and America have in this matter adopted the only course which was open. It is understood that the whole arrangement will be financed in the London market at an early date; but American houses are participants in the syndicate which, as usual in such cases, underwrites the new bonds, and subscriptions for a portion thereof will be invited by prominent New York banks and bankers.

Hostilities in Central America are proceeding without any apparent action in the nature of intervention by either the United States or Mexico. At the same time the governments of the two last-mentioned countries have not entirely abandoned their efforts to bring about a peaceable settlement. Advices during the week have told now of a Nicaraguan success and again of a victory of the Honduran troops, but the engagements thus far had have been in no way decisive. One report of importance has come in the dispatches, namely, that Salvador, Guatemala and Costa Rica are likely to join forces with Honduras against Nicaragua, whose President is credited with the ambition of making himself the master of Central America. Thus far this project has not taken shape, however, and the present outlook is for a continuance of a series of small engagements without any very definite results. A late account tells of a revolution in Honduras, which is said to be due to the failure of the government to gain a decided advantage in the struggle with Nicaragua.

Instead of an increase, a decline in the total amount of money in circulation is indicated in the figures given out by the Treasury Department on March 1. Decreases for the month of February were shown in gold coin, gold certificates, standard silver dollars, and Treasury notes of 1890. The only marked decrease, however, was one of over $16,100,000 in gold certificates. The other items showed slight increases. The decrease for the month amounted to over $12,100,000. As compared with March 1 last year there was a gain of over $219,400,000. The most noteworthy item of increase was one of over $45,500,000 in national bank notes, which was closely followed by an increase of over $44,000,000 in gold coin. Gold certificates exhibited a gain of over $9,700,000, standard silver dollars an increase of over $3,500,000, silver certificates a gain of over $1,800,000 and subsidiary silver an increase of over $13,300,000. There was a decline of over $1,500,000 in Treasury notes of 1890, but an increase of over $2,800,000 in United States notes. The amount of money of all kinds in circulation on March 1 was $2,890,721,222. On the basis of a population estimated at 85,602,000, the circulation per capita is put by the Treasury experts at $33.77. This represents a decrease of 19 cents for the month, but an increase of $2.04 as compared with the corresponding date last year.

What was, in many respects, the most interesting local election in Great Britain in many years was that held in London on Saturday last. The so-called Progressives, who have been in control of the London County Council for eighteen years, were this time opposed by a party known as Municipal Reformers, whose rallying cry was opposition to the municipal ownership régime so long supported by the Progressives. The long-continued control of the latter was brought to an end by a signal victory of the Municipal Reformers, who won a large number of seats in the election. Public sentiment was very much worked up over the election, in which an unusually large number of the voters participated. The outcome in London is regarded as indicative of the state of public feeling in other localities where municipal extravagance has for some time been the subject of criticism.

THE WORK OF THE FIFTY-NINTH CONGRESS.

With its close at noon on Monday the Fifty-ninth Congress completed a record such as is not ordinarily achieved in times of peace. Not a few of the measures enacted are entitled to be classed as important; some of them are likely to have far-reaching results. Prominent among them must be ranked the Railway-Rate law, one of the most vigorously debated measures passed in recent years. The Pure-Food and Meat-Inspection laws are to be regarded as among the really significant acts passed by the Congress which has just come to an end, and the Aldrich Currency law must be considered among the most useful pieces of legislation standing to its credit. The law providing for the admission of Oklahoma, including Indian Territory; that providing a uniform rule for naturalization; the act bringing about a reorganization of the consular service; that defining the liability of negligent common carriers for injuries to employees; that limiting the hours of work of railroad employees; that restricting the immunity of witnesses in criminal cases; that freeing from tax alcohol for use in the arts; that limiting national bank liabilities to 30 per cent. of their capital, and that revising the Trade-Mark law, are all measures of moment which must be set down to the credit of the Congress which has just concluded its work.

Other enactments which have been placed upon the statute book and which must be classed as of general interest are the revision of the Immigration law which authorizes the exclusion of coolies from the Orient; the Expatriation law defining the citizenship and status of Americans married to foreigners; the law prohibiting national banks and corporations from contributing to political campaign funds; that authorizing the establishment of a Philippine Agricultural Bank; that authorizing farmers to operate stills of limited capacity for the manufacture of alcohol; that penalizing the practice of "shanghaiing"; that reorganizing and enlarging the artillery service; that fixing the New Jersey-Delaware boundary; that providing for two 20,000-ton battleships, and that giving the government a limited right of appeal in criminal cases. One noteworthy enactment was the law increasing the salaries of the Vice-President, Speaker, members of the Cabinet and ministers. The Senate ratified treaties regulating the administration of the Santo Domingo finances, that concerning the affairs of Morocco, and the conventions dealing with the Mexican boundary.

Among the measures which failed, the most conspicuous was the Ship-Subsidy bill. This measure was at first defeated in the House by the close vote of 161 to 154. Some members of the majority having gone away, the New York member in charge of the bill changed his vote in order to be able to move to reconsider the vote. The minority leader moved to lay this motion to reconsider on the table, and on a roll call it was found that the latter motion was defeated by a vote of 159 to 156. The motion to reconsider was then adopted, and finally the bill itself was passed by a vote of 155 to 141. This did not secure the passage of the bill, however. When the measure was called up in the Senate and the debate began it became evident that the bill could not pass before the session came to an end, owing to the determination of the minority to exhaust the time remaining in discussion. Dilatory tactics were successful, and after an all-day Sunday session devoted largely to its consideration, the bill was finally withdrawn on Monday. Other measures which went over were the bills conferring citizenship on Porto Ricans; reducing the tariff on products of the Philippines; providing for the ownership by the United States of its embassies and legations; revising the Copyright laws; codifying the Revised Statutes, and providing for the reservation and leasing of coal and mineral lands. These with other bills which fell by the wayside will be heard from at the next session.

A record was made by the Congress which has just expired in the matter of appropriations. Those made at the first session amounted to $880,183,301.32, while at the second session the appropriations made aggregated $919,948,679.63. Together these sums give a total of $1,800,131,980.95. This is over $198,000,000 in excess of the total appropriations made by the Fifty-eighth Congress, while it is over $845,000,000 in excess of the total sum voted by the Fifty-fourth Congress, which closed its work on March 4 ten years ago. The expenses of the government are certainly mounting at a rapid rate, and will, apparently, never get within sight again of the level which prevailed before the war with Spain. As it happened, Chairman Tawney of the House Committee on Appropriations seems to have been able to obtain the paring down of some of the amounts originally carried, for, while a couple of weeks ago he declared that a deficit of something like $100,000,000 was in sight, he announced on Monday that there might be instead a surplus of about $20,000,000. In the near future, however, we are likely to have two-billion-dollar congresses, instead of the billion-dollar Congress which was the subject of so much criticism not many years ago.

A VERY WEAK STOCK MARKET.

In some cases the quotations for the leading railway shares traded in at the New York Stock Exchange have this week touched lower figures than have been seen for the same securities in the past four or five years. There has undoubtedly been a great deal of actual liquidation, and it is also unquestionable that bearish operators have utilized the opportunity thus afforded to go short of the market on an extensive scale. It might, in fact, be remarked that the rallies, which have been an important feature in the speculative proceedings, notably the ten-point rise in Reading shares on last Wednesday, were, in the main, the result of covering by the bearish interest.

It is proverbial for Wall street to invent theories, which, in the absence of accurate information, would explain the heavy decline of the past week. In this instance the first and very natural supposition was that the holdings of the Union Pacific Railroad Company, or what is commonly called the Harriman interest, in the stocks of the Northern Pacific, Great Northern and Atchison companies were being liquidated. Such a construction in regard to the actual developments seemed to have a certain amount of plausibility. It was noted that the big breaks in the market on last Monday centered in the so-called Hill group, and that on Tuesday and Wednesday Atchison bore the brunt of the enforced liquidation. Some other very remarkable hypotheses have also been put out. It was, in fact, seriously advanced on last Wednesday that the Harriman party were buying control of Reading, although there does not seem to be the slightest foundation for assertions of this character. The main facts, indeed, seem to be pretty clear. Large speculative interests have been carrying vast amounts of high-priced stocks, some of which were doubtless bought at considerably higher prices than those which now prevail. In view of current money-market conditions and the absence of a public buying demand, even for reliable dividend-paying stocks, it is a fair supposition that the parties in question came to the conclusion that a liquidation of their speculative investments would be the best course, and that these facts having been divined by the bear element on the Stock Exchange, which is always keen to detect evidences of action of this kind, there has been a general outpouring of securities, together with a more or less artificial marking down of quotations, calculated to help the movement along.

At the same time the street and the public have throughout the past week been treated to a number of more or less interesting developments and deliverances of opinions by people who are credited with standing in the front ranks of the financial contingent. Mr. Harriman has been in Washington and is reported to have conferred with the Interstate Commerce Commission, which recently investigated him. Announcements are made that he has expressed himself freely both to the Interstate Commerce Commissioners and to representatives of the public press, to the effect that greater publicity about railroad corporation affairs and a coöperation between the Interstate Commission and the managements of the leading railways are highly desirable. Furthermore, the same gentleman is quoted as bearing out the opinions already laid before the public by his greatest rival, Mr. James J. Hill, of the Great Northern, to the effect that enormous expenditures will have to be made by the carrying corporations of the country in order to meet the demands which the expanding business of the nation requires. Mr. Hill, it is true, was somewhat more explicit than Mr. Harriman, having put the amount of capital required each year at somewhere around $1,000,000,000, for, say, four or five years, whereas Mr. Harriman puts the amount in a somewhat vague way as "billions," and says that the practical reconstruction of a large number of the main arteries of freight and passenger transportation is necessary. It might be noted, however, that, according to published accounts, the Hill and Harriman factions have succeeded in burying their differences in connection with further extensions of their respective systems in the Pacific northwest, so that mutual obstacles in the way of the Union Pacific obtaining an entrance to Seattle or of the Great Northern getting into Portland have been practically removed.

RUSSIA'S SECOND DUMA MEETS.

Another noteworthy stage in Russian history was reached on Tuesday, when the second Duma met for the first time for the purpose of preliminary organization. The meeting of the new legislative body itself was marked by no incident of consequence. The session was formally opened at noon in the presence of a crowd which packed the galleries. After a religious service the lower house was called to order by M. Goluboff, the vice-president of the Council of the Empire, who, after an address of a colorless official type, asked the members to sign the oath of allegiance to the Czar. When the oath had been signed the Assembly proceeded to the election of a president. The choice fell upon M. Golovin, the president of the Moscow Zemstvo and a Constitutional Democratic member from that province. He secured a large majority of the votes of the members. M. Golovin is an old-time Liberal, but is not classed as a radical in any sense.

In a brief address in acknowledgment of his election, M. Golovin said that, although of varying opinions, the members of the Duma were all united with the same intention of unifying the country on a constitutional basis. The way for relief from the sufferings of the country had, he said, been pointed out by the first Duma, and involved the fulfillment of the promises made in the manifesto of October, 1905, and the working out of a mass of social legislation. The principle of popular representation, M. Golovin said, was powerful, and once called into life could never die. In unity with the will of the Czar and the hopes of the country, he continued, the Duma must and would irresistibly advance until its high mission was fulfilled. After the address the Minister of Finance presented the budget, which showed a revenue exceeding expenditures in 1906 by over $15,000,000. Consideration of the budget was, however, deferred, owing to the announcement by the newly chosen presiding officer that the first duty of the Assembly was to announce his election to the Czar, pending which he adjourned the legislative body. The Council of the Empire, the upper house of the Parliament, also met on Tuesday, but only adopted a resolution of sympathy with the widow of a member, Count Ignatieff, who was assassinated in December last.

The lower house did not meet on Wednesday, pending the visit of M. Golovin to the Czar. The meeting is said to have been of a friendly and even cordial nature. In the course of the interview the Czar is reported to have declared himself thoroughly satisfied with the proceedings of the first session of the House, and to have assured M. Golovin that he and the ministers were inspired by the best feelings toward the Duma, and hoped that its work, with the assistance of the legislative projects which the ministers had prepared, would be fruitful of benefit to the country. It is to be borne in mind, of course, that the first session was largely a matter of form. The possibility of friction will come with the discussion of the ministerial projects. The presentation of the ministerial declaration of policy has been deferred till next week. The discussion of the budget will be the first regular business of the lower house.

There is thus far no hint of trouble in relation to this. The budget discussion will be followed by the consideration of the habeas corpus act, a draft of which appears to have found acceptance with many of the constitutionalists of the House. Legislation dealing with agrarian matters will be considered in committee, but will hardly be discussed in general session for some weeks.

While considered from within the opening of the Duma has been devoid of any untoward incident, it will not escape attention that without the walls of the Tauride Palace the day was marked by demonstrations of a revolutionary character. In some cases crowds were dispersed by the police, aided by troops, but the demonstrations passed off without any actual collision, and in parts of the city there was no interference by the police. A feeling of nervous tension was apparent throughout the city, and a sense of relief was experienced by the authorities when the day was gotten through without serious trouble. As regards the future, much will doubtless depend upon the tone of Premier Stolypin's declaration of policy and the manner in which the government will receive the demand now in process of formulation for amnesty for all political offenders.

FEBRUARY FAILURES AND LIABILITIES.

Business failures reported to BRADSTREET'S for the month of February numbered 775, a decrease of 30 per cent. from the January total, but an increase of 1.4 per cent. over February a year ago. Liabilities for the month aggregated $10,311,494, a decrease of 42.5 per cent. from January, but an increase of 9 per cent. on February, 1906. This latter month showed a decrease of 37 per cent. in failures and a falling off of 39 per cent. in liabilities from January, 1906. So far as the comparisons with the first month of the two years are concerned, therefore, the February totals this year and last do not show much change. In number, the February failures are quite low; only three of the past fifteen years show fewer casualties in February than does the month just closed. The only feature, in fact, needing explanation is the increase in liabilities shown over February a year ago, which is attributable to the inclusion of two large failures, one of a flour milling concern in Illinois and the other of a carpet manufacturing concern in Pennsylvania.

The showing in February for fifteen years past is illustrated by the following table:

	Number	*Assets*	*Liabilities*
1907	775	$5,656,504	$10,311,494
1906	764	4,230,605	9,453,893
1905	849	5,045,491	8,945,310
1904	847	9,485,236	15,813,954
1903	778	4,136,544	8,961,110
1902	854	7,430,617	12,173,227
1901	868	3,663,491	9,492,492
1900	747	10,540,065	18,400,183
1899	772	4,378,854	9,663,724
1898	903	5,929,272	10,062,079
1897	1,193	10,307,428	16,039,037
1896	1,217	8,223,970	14,522,124
1895	1,663	5,680,360	11,317,613
1894	1,181	7,167,406	14,112,413
1893	843	4,565,321	9,445,913

For the two months ending with February the number of failures this year is 1,884, as against 1,994 in 1906, while the liabilities for two months aggregate $28,387,089, as against $24,814,081 last year. There is here shown a falling off of 5.5 per cent. in the number of casualties but an increase of 14 per cent. in the failure damage as compared with last year. As this increase in liabilities is due entirely to the failure of three concerns in isolated sections, which have greatly swelled the latter totals, while the number of failures is considerably smaller, the returns so far this year fail to show any effect as yet of the predicted quieting in trade, or to reflect the bearishness which has become so pronounced of late.

The features of the detailed returns by groups of states are the falling off in casualties shown in the northwest and the far west and the increase shown at the south. New England, the middle states and the central west show practically no change. As regards liabilities, the northwest, the west and the far west show smaller totals of damage, the noteworthy increases being in the middle and southern groups.

The large failures of the month are no more numerous than of late. There were twenty such with liabilities in excess of $100,000 each. Banking suspensions were notable for their rarity.

Canadian failures for the month numbered 100, with liabilities of $542,345, as against 112 failures, with liabilities of $774,843, in February a year ago, decreases of respectively 10 and 30 per cent. from last year.

February	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1906
New England	96	$253,606	$593,790	91	$186,560	$470,775
Middle	230	1,941,022	3,874,654	231	832,072	2,574,120
Western	161	1,477,626	2,556,814	161	1,608,503	3,220,622
Northwestern	42	240,635	428,080	58	362,486	771,507
Southern	188	1,353,993	2,278,099	156	1,006,919	1,853,252
Far-western	44	319,222	464,957	63	216,565	539,717
Territories	14	70,400	115,100	4	17,500	23,900
Total, United States	775	$5,656,504	$10,311,494	764	$4,230,605	$9,453,893
New York City	96	348,373	1,406,872	91	363,004	1,354,195
Manhattan and Bronx	83	341,158	1,382,987	86	359,998	1,340,096
Canada	100	252,122	542,345	112	73,933	774,843

FEBRUARY BANK CLEARINGS REFLECT REDUCED SPECULATION.

February bank clearings are always among the smallest of the year, it being a short month at best, and with two holidays in most sections of the country. It is, therefore, no surprise to know that the February total fell heavily behind that of January, but an additional feature is that it also shows a decrease from February, 1906, due mainly to reduced speculative activity at a few large eastern centers. In fact, if New York is excluded from the total a large gain is shown over a year ago, indicating that in the country at large business, as reflected in clearings totals, was larger in February this year than ever before in that month.

The total clearings at ninety-seven cities for the month of February aggregate $11,693,630,975, a decrease of 21.5 per cent. from January, and of 5.6 per cent. from February, 1906. New York City's total aggregated $7,331,509,775, a decrease of 23.9 per cent. from January, and of 11.9 per cent. from February, 1906. Outside of New York the total at ninety-six cities for February is $4,362,121,200, a decrease of 17.3 per cent. from January, but a gain of 7.2 per cent. over February last year, and to this extent the best February showing ever made. As to this latter, also, it may be said that both at New York and outside thereof the decrease shown from January this year is smaller in each case than the similar showing a year ago. One explanation of this is that stock speculation in January a year ago was very active. This year it was dull; hence the decreases this year are smaller than a year ago.

For the two months ending with February the clearings at ninety-seven cities this year aggregate $26,604,873,618, a decrease of 7.1 per cent. from last year. New York City's total for two months aggregates $16,969,180,659, a decrease of 13.2 per cent. from last year; but outside of New York the total at ninety-six other cities is $9,635,692,959, a gain of 6.1 per cent. over 1906.

Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328
Mar	....	12,911	12,855	8,335	9,533	8,884
April	....	12,695	12,672	8,267	9,530	10,881
May	....	13,133	11,988	8,171	9,073	10,348
June	....	12,156	10,756	8,016	9,386	8,177
July	....	11,569	10,806	8,625	9,724	10,139
Aug	....	13,011	10,846	7,968	7,888	8,996
Sept	....	12,410	10,804	8,785	7,625	10,106
Oct	....	14,410	12,538	11,439	9,111	11,297
Nov	....	13,525	13,057	12,443	8,105	10,032
Dec	....	14,182	14,361	12,738	9,225	9,810

The monthly clearings at New York and at all other cities reporting compare with preceding months of 1906, 1905 and 1902 as follows:

[Six figures omitted.]

	New York City				*Outside New York*			
	1907	1906	1905	1902	1907	1906	1905	1902
Jan	$9,638	$11,238	$7,735	$6,929	$5,273	$5,007	$4,050	$3,634
Feb	7,331	8,324	7,118	5,348	4,362	4,066	3,480	2,977
Mar	....	8,377	8,731	5,506	....	4,533	4,124	3,377
April	....	8,543	8,681	7,352	....	4,152	3,991	3,526
May	....	8,793	7,884	6,805	....	4,340	4,104	3,541
June	....	7,816	6,735	4,967	....	4,340	4,020	3,207
July	....	7,256	6,839	6,593	....	4,312	3,967	3,546
Aug	....	8,833	6,980	5,816	....	4,178	3,865	3,087
Sept	....	8,314	6,859	6,804	....	4,097	3,944	3,300
Oct	....	9,344	8,026	7,496	....	5,066	4,512	3,799
Nov	....	8,607	8,542	6,539	....	4,917	4,514	3,495
Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

The clearings by sections for February and the two months of 1907 compare with the same periods a year ago as follows:

	February	*Two months*
New England	Increase 1.6	Increase 4.8
Middle	Decrease 10.9	Decrease 12.2
Western	Increase 10.9	Increase 9.3
Northwestern	Increase 12.1	Increase 8.6
Southwestern	Increase 12.6	Increase 10.7
Southern	Increase 3.8	Increase 4.7
Far-western	Increase 18.2	Increase 15.7
Total, United States	Decrease 5.6	Decrease 7.1
New York City	Decrease 11.9	Decrease 13.2
Outside New York	Increase 7.2	Increase 6.1
Canadian	Increase 2.4	Increase 5.7

The middle group of cities alone shows a decrease from February a year ago, this being mainly caused by New York's decrease of 11.9 per cent., though Philadelphia shows a decrease of 5 per cent. Pittsburgh gained 2.4 per cent. The New England group makes a slight gain—1.6 per cent.—Boston's increase being 1.7 per cent. The next smallest increase is shown in the south—3.8 per cent.—New Orleans decreasing 2.7 per cent., while Baltimore gains 8 per cent. The western group gains 10.9 per cent., the northwest 12.1 per cent., the southwest 12.6 per cent. and the far west 18.2 per cent. In the latter group San Francisco gains 24 per cent. In the southwestern group St. Louis gains 5.2 per cent., while Kansas City gains 21 per cent. In the northwestern group Chicago shows a gain of 12 per cent. and Minneapolis an increase of 7 per cent. In the western group Cincinnati gains 19 per cent. and Cleveland 11 per cent.

Clearings at eleven Canadian cities for the month of February aggregate $288,817,783, a gain of 2.4 per cent. over February, 1906. Montreal shows a loss of 11 per cent. from February a year ago, while Toronto gains 2.5 per cent. For two months the aggregate at eleven cities is $645,434,804, a gain over 1906 of 5.7 per cent.

A GREAT RAILROAD REPORT.

By reason of the territory traversed, the mileage operated, the freight and passengers carried, and the gross and net earnings realized therefrom, the annual report of the Pennsylvania Railroad and its allied corporations is a barometer of the country's business second to none, and transcending in many respects that of any other corporation in the country of its kind. In fact, with the exception of the report of the United States Steel Corporation, there is probably no other concern whose operations equal in importance those of the great common carrier which has this week given its report to the public. A full synopsis of the report is given in another column; hence the massing of totals and the portrayal of tendencies noted in this compilation are all that can be treated of here. The combined income account of all transportation companies, east and west of Pittsburgh and Erie, owned, operated or controlled by, or affiliated in interest with, the Pennsylvania Railroad system for the year 1906 compares as follows:

	1906	1905	1904
Miles operated	11,080	11,011	10,918
Gross	$295,898,165	$266,069,597	$238,242,402
Expenses	211,543,766	192,100,348	171,457,694
Net	84,354,399	73,969,249	66,784,708
Other income	25,035,834	21,821,289	20,673,809
Total income	109,390,233	95,790,538	87,458,517
Charges *	107,845,373	94,647,720	84,937,675
Surplus	1,544,860	1,142,818	2,520,842

* Includes interest, rentals, dividends and other charges, including extraordinary expenses and extraordinary expenditure funds.

There is here shown a total of gross earnings by all the Pennsylvania lines in 1906 of $295,898,165, a gain of 10.9 per cent. over 1905 and of 24 per cent. over 1904. Operating expenses aggregated $211,543,766, a gain of 9.9 per cent. over 1905 and of 23.4 per cent. over 1904. Net earnings in 1906 aggregated $84,354,399, a gain of 14 per cent. over 1905 and of 26.3 per cent. over 1904. It is to be noted that operating expenses, which in 1906 were 71.5 per cent. of the gross, compare with 72.1 per cent. in 1905 and 71.8 per cent. in 1904. This showing, in view of the largely increased cost of materials and labor in the year 1906, as compared with 1905 and 1904, is certainly testimony to the management of this great corporation and to the working out of economies planned years ago, though it may be said that considerable additions to cost of operation made late in 1906 will not find full reflection until the 1907 report is compiled.

The item of other income makes an interesting showing, aggregating, as it did, $25,035,834, a gain of 14.6 per cent. over 1905 and of 21 per cent. over 1904.

Traffic statistics of the consolidated systems and affiliated roads make the following exhibit:

	1906	1905	1904
Tons of freight carried	363,955,827	325,976,889	284,619,214
Tons carried one mile	32,918,720,000	29,503,147,000	25,131,495,000
Passengers carried	140,513,364	126,004,539	119,948,663
Passengers carried one mile	3,475,646,000	3,075,403,000	2,950,897,000

The above table shows a gain in 1906 over 1905 of 11.7 per cent. in the tons of freight carried, of 11.5 per cent. in the tons carried one mile, of 11.1 per cent. in the

passengers carried, and of 13 per cent. in the number of passengers carried one mile.

The report of the lines east of Pittsburgh directly operated for the past two years is as follows:

	1906	1905	*Increase*
Gross earnings	$148,239,882	$133,921,992	$14,317,890
Operating expenses	101,805,644	93,390,410	8,415,234
Net earnings	46,434,238	40,531,582	5,902,656
Rentals paid	7,300,899	7,662,810	*361,911
Net earnings	39,133,339	32,868,772	6,264,567
Other income—			
Income from investm'ts	12,087,203	10,018,026	2,069,267

Final surplus	2,500,000	....	2,500,000

* Decrease. † Six per cent.

Mention is made by President McCrea in his annual report of the fact, already made public, that the Pennsylvania has divested itself of all of its holdings of Chesapeake & Ohio Railway stock and a majority of its holdings of Baltimore & Ohio and Norfolk & Western shares. This, it is explained, is due to the fact that the objects sought through the purchase of those stocks—the promotion of a more conservative policy in the management of the railroads reaching the seaboard and the doing away with unjust discriminations between shippers—have been largely accomplished. Tribute is also paid to the recent amendments to the Interstate Commerce law as having secured the maintenance of tariff rates. Incidentally, the report shows that the profit to the Pennsylvania from the above stock transactions was $15,200,849, of which $13,000,000 was charged to the item of New York tunnel construction. The Pennsylvania holdings of stocks of other companies on December 31, 1906, represented a cost of $194,769,719, a decrease of $36,300,000 from December 31, 1905. Also, on the securities retained in the Pennsylvania's treasury, a return of 6.03 per cent. on the investment is figured.

Another point touched upon by President McCrea is the fact that the policy of his predecessors, Messrs. Thomson and Cassatt, which has long been known to be that of liberal expenditures for improvements, was triumphantly vindicated by the events of the year. These improvements, many of which date back to 1902, and most of them now approaching completion, were made on very favorable terms, both as to the cost of the work and the rate at which the funds necessary were secured. Financial needs of other railways imitating the Pennsylvania's action toward improvements, the pressure of demand for money from general industry, the high cost of labor and material, and legislation, both state and municipal, in the direction of increased taxes or reduced rates, however, now force upon the company a policy of reducing its capital expenditures to a minimum, and the announcement is made that the policy for the near future will be to restrict new expenditure and confine work to that which is absolutely necessary.

Reference is made to the results of the inquiry into the relations of Pennsylvania employees with outside corporations, and while, with few exceptions, the officers and employees of the company have been found faithful to duty, it has been decided that it will be to the interest of the company in the future that none of its officers or employees shall have any holdings in any company or firm operating or dealing in coal, or in any other business where such holdings might conflict with their duty to the company or the company's duty to the public.

Mr. McCrea notes further that the shareholders will be asked to authorize additional stock to an aggregate of $100,000,000, but at the same time it is stated that authority will be requested to increase the company's indebtedness, from time to time, to the same aggregate amount, in such form as may be found most available at the time of issue. The statement is also reiterated that the capital requirements of the company for the current year will be met through the issue of $60,000,000 of three-year 5 per cent. collateral notes placed some time ago, this being deemed more advisable than a sale of long-term bonds at the prices now prevailing.

All in all, the report is such a one as might have been expected from the Pennsylvania Railroad, which now, as in the past, shows itself to be a leader among the leaders in the transportation interests of the country.

A BRIEF AGAINST MUNICIPAL OWNERSHIP.*

The question of municipal ownership has now reached such a stage as to call for a closer and more definite examination than has yet been had of the asserted advantages of the policy and of its ascertained results where it has been applied. The results of the agitation of the subject as regards the railways in Chicago and the closeness of the vote in the New York City election of 1905, where one of the candidates stood on a municipal ownership platform, have demonstrated that the question is an actual one, while the statistics of the growth of the burden of local debt in recent years demonstrate its importance to the taxpayer. Fresh interest has been lent to the subject recently by the statements coming from London regarding depreciations in the stocks of municipalities which have adopted the policy of public ownership, owing to the extent of their borrowings; by the complaints made in the French capital of the expense and inefficiency of the government telephone service, and, finally, by the overthrow in the London County Council elections of the municipal ownership régime, which has been in control for eighteen years.

It will be recalled that the National Civic Federation some time ago appointed a committee to investigate and report upon the actual results of public ownership and operation so far as they have been undertaken in the United States, and of the more extensive practice along those lines in foreign countries. The constitution of this committee gives ground for the expectation that its report will be the most important contribution to general information upon the subject that has yet been made. Pending its appearance, however, those interested in the subject, and they, we imagine, comprise a large and growing class, will not neglect other contributions of interest. One of these which has recently made its appearance is the volume on "Dangers of Municipal Ownership," by Mr. Robert P. Porter, well known as the Director of the Eleventh United States Census.

The title of the volume sufficiently indicates that the writer has already made up his mind upon the question, or, at any rate, upon some phases of the question. Indeed, in his preface he declares that the object of the book is to set forth "the inherent defects of the whole principle of public trading." In the main, the instances upon which the writer bases his unfavorable conclusions respecting municipal ownership are taken from the experience of municipalities in the United Kingdom, but he discusses also the history and results of municipal and state ownership in Russia and Australasia, and compares the results of telephone operation by the state or by municipalities in various European countries with that of the condition of the service under private operation in the United States. The author has made a timely and interesting contribution to the discussion of a subject which has grown in importance in the United States of late years. His marshaling of the evidence gathered by him is forceful, and in the present state of the question the volume cannot be neglected by students of the municipal ownership problem.

* The Dangers of Municipal Ownership. By Robert P. Porter, Director of Eleventh United States Census. Pp. xi—356. New York: The Century Company. 1907.

EDITORIAL NOTES.

Visible wheat supplies in America changed very little during February, but those in Europe gained considerably, the result being the swelling of the combined American and European total 8,000,000 bushels above that held on March 1. The following figures show the American and European stocks of wheat on the first of each month since January 1, 1905, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	84,2	88,1	86,7	164,6	163,5	138,6
April 1	....	69,2	46,4	....	90,7	89,8	....	159,9	136,2
May 1	....	55,2	38,5	....	87,7	85,2	....	142,9	124,7
June 1	....	43,7	29,0	....	82,7	82,4	....	126,4	111,3
July 1	....	36,4	20,3	....	74,7	80,2	....	111,1	100,5
August 1	....	43,1	20,9	....	65,3	72,1	....	108,4	93,0
Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

American supplies on March 1 aggregated 80,374,000 bushels, a gain of 1,087,000 bushels over February 1, and comparing with a gain of 3,018,000 bushels in the same period a year ago, 5,768,000 bushels in 1905 and 4,918,000 bushels in 1904. The detailed statistics of stocks held in the United States and Canada east and west of the Rocky mountains on March 1, 1907, as compared with the same period of the three preceding years:

	East of Rockies	*Pacific coast*	*Total American visible*
March 1, 1907	78,630,000	1,744,000	80,374,000
March 1, 1906	70,530,000	4,898,000	75,428,000
March 1, 1905	50,207,000	1,673,000	51,880,000
March 1, 1904	50,659,000	2,930,000	53,589,000

American stocks, it will be seen, are 4,946,000 bushels larger than on March 1, 1906, 28,494,000 bushels larger than on March 1, 1905, and 26,785,000 bushels larger than on March 1, 1904. European supplies on the same date aggregated 84,200,000 bushels, a gain of 9,200,000 bushels for the month of February, as against a gain of 12,500,000 bushels a year ago. The combined American and European totals on March 1 were 164,600,000 bushels, a gain of 8,100,000 bushels on February 1, as against 9,500,000 bushels in the same period of 1906, and a decrease of 6,000,000 bushels in 1905. The total is 1,100,000 bushels larger than that held on March 1, 1906, and 26,000,000 bushels larger than that held on March 1, 1905.

One of the storm centers in this week's exceedingly erratic speculative stock market was Atchison common, which, in the space of a fortnight or so, sold down from par to 92 on last Wednesday. This decline has been in the face of phenomenal earnings by the system, excellent prospects for its immediate future, and more or less talk that the half-yearly dividend rate, which was raised from 2 to 2½ per cent. in December, might be still further increased at the coming June dividend period to 3 per cent., thereby putting the stock upon a 6 per cent. annual basis. As noted elsewhere, there has been some question whether the heavy selling of Atchison, which was, as already mentioned, such a feature in the week's stock market movements, did not represent a liquidation of the holdings acquired by the members of what are known as the Harriman party. On full consideration, Wall street apparently reached the conclusion that this theory would hardly hold water, and it would seem that the prospects in connection with the dividend rate upon the stock and technical market conditions had the greater share in determining the outcome.

An interesting item of cable news this week was the report from Berlin that the Imperial German Finance Minister had been interpellated by a member of the Reichstag as to why the German Imperial Bank rate was kept so high. The reply was, naturally, that the rate was justified by the conditions in trade and finance in Germany, and the inference was that high rates were to be looked for for some time to come. In keeping with this piece of information is the statement made in the annual report of the Deutsche Bank, presented at the thirty-seventh annual meeting yesterday in Berlin, that the whole world, but more particularly Germany and the United States, is suffering from an excess of prosperity, in that the cash requirements for new enterprises have exceeded the provision of new capital required therefor. The statement of this bank itself shows that its total business during the past year has increased from $18,334,000,000 to $20,239,000,000, or to the extent of 10.3 per cent., and the number of open accounts increased from 139,000 to 164,000, or 18 per cent. It was further shown that while the capital has been maintained at last year's total, $47,619,000, the reserve has been increased from $22,619,000 to about $25,000,000. In addition, the unwritten reserve, being that represented by the book valuation, less than the market value of the investments, has increased to $14,280,000, thus making the total actual reserve more than 80 per cent. of the total share capital. The total of cash items amounts to $245,000,000, while the total due the public for cash deposits aggregates $298,000,000. It is no surprise to learn that the usual dividend of 12 per cent. has been declared, and that the shares are quoted at 241 per cent.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Interstate Commerce Law—Complaints.

The enactment of the interstate commerce law took away the common-law right of individuals, which existed before the enactment of that statute, to make complaint to the courts against railroads for discrimination, according to the decision of the Supreme Court of the United States in the case of The Texas Pacific Railroad Company vs. The Cotton Oil Mills at Abilene and Cisco, Texas. Complaints of that kind must therefore now be made through the Interstate Commerce Commission.

Land—Trespass—Territory—Jurisdiction.

The Court of Appeals of the District of Columbia held, in the case of The Irrigation Land & Improvement Company vs. Hitchcock, that a suit for an injunction against the Secretary of the Interior, the gravamen of which was alleged continuous acts of trespass upon lands and easements of complainant, situated in Arizona, by agents and subordinate officers of the Secretary of the Interior, the principal question involved being the title to the land alleged to be in the complainant, could not be maintained in the courts of the District of Columbia.

Corporation—Shareho'der—Transfer.

The Kentucky Court of Appeals held, in the case of Bracken et al. vs. Nicol, that a shareholder in a corporation, although a director, who in good faith, free from any suspicion of fraud or to escape liability, sells his stock and requests the officers in active charge of the corporation, who have control of its books in making the transfer, to do everything that is necessary to perfect such transfer in a legal way, and is informed by them that there is nothing more to be done, will be relieved from future liability as a shareholder, although no book was kept by the corporation in its principal office in which all transfers of such stock should be entered, stating the number of shares transferred and by and to whom, as required by section 546 of the Kentucky statutes.

Employer's Liability—Private Companies.

The Supreme Court of Indiana has just decided, in the case of Bedford Quarries Company vs. Bough, that the employer's liability act of that state is unconstitutional as applied to any corporations except railroads. In this case a judgment was recovered in the court below for injuries caused by the fall of a stone in a stone sawmill, alleged to have been due to the carelessness of the foreman. The ground taken by the Supreme Court was that the act was unconstitutional with regard to private corporations in that it discriminated as between employers engaged in the same business. As regarded railroads, however, the act was upheld because of the peculiar character of their business and the extraordinary dangers incident to railroading, and because the law made it practically impossible for an individual to operate a railroad by reason of lacking the powers of eminent domain and other privileges conferred on railroad companies.

Police Power—Regulating Pharmacy.

A statute of Minnesota (sections 2327-2341 of the laws of 1905) regulates the business of pharmacy in the state, creates a state board of pharmacy and prescribes its duties, providing for the licensing of pharmacists and for the imposition of fees for the issuance and removal of licenses. The Supreme Court of Minnesota held, in the case of The State of Minnesota vs. Hovorka, that the matters dealt with by the statute constituted proper subjects for legislative supervision under the police power, and that the statute itself was not unconstitutional either as depriving persons licensed under prior statutes of vested rights or as being otherwise obnoxious to the principles of the fundamental law. The court further held that the license fee imposed by the statute was not a tax upon the business of pharmacy, but a charge upon those engaged in that occupation for the support and maintenance of the machinery provided for its regulation.

Extradition—Indictment—Evidence.

In the case of Royster vs. Treat, and a number of other cases known as the Fertilizer Trust cases, which involved the right of the United States to compel the removal of indicted officials of the fertilizer companies constituting the alleged trust from Virginia to Tennessee for trial, the Supreme Court of the United States held that the Circuit Court for the Eastern District of Tennessee had erred in holding that the indictment against the appellants was sufficient to secure the removal of the cases without regard to the evidence. Chief Justice Fuller, who read the opinion of the court, said that that tribunal had never held that in removal cases the indictment of a person was sufficient to secure his transfer from one jurisdiction to another, and now held that it was not sufficient. He said that removal could be ordered only on showing sufficient cause for such a course; that this could only be done by a scrutiny of the evidence, and that to refuse such an investigation was a denial of a right secured by statute by the Constitution.

Constitutional Law—Flag—Advertisement.

The Supreme Court of the United States held, in the case of Halter et al. vs. The State of Nebraska, that a state law prohibiting the use of representations of the national flag on packages of merchandise was constitutional. The appellants, liquor dealers in Omaha, were convicted and fined under a Nebraska law on the charge of selling beer in bottles decorated with the national colors. The action of the trial court was sustained by the state Supreme Court, whose judgment was affirmed by the federal court of last resort. Mr. Justice Harlan, who read the opinion of the court, said that the state had the power to say how far it would go by way of legislation for the protection of the flag against improper use, taking care in such legislation not to make undue discrimination against any part of the people. The statute in question forbade all alike to use the flag for purposes of advertisement, and such prohibition was clearly within the power of the state and violated no right secured by the Constitution of the United States.

Railroad—Condemnation—Reversion.

The Supreme Court of Minnesota held, in the case of Chambers vs. Great Northern Power Company, that the title acquired to lands in condemnation proceedings for right-of-way purposes by a railroad company under its charter was in the nature of an easement or terminable fee, and that the lands reverted to the original owner when abandoned by the railroad company for the purposes acquired, namely, the maintenance and operation of a railroad; and that under a charter which authorized a railroad company to acquire by condemnation proceedings a strip of land 200 feet in width over private property for a right of way for the purpose of maintaining and operating a railroad thereon, the company abandoned the right of way by failing to operate trains thereon for a period of ten years, by removing the track and bridges, and by constructing and operating a new line to accomplish the same purposes. The Supreme Court further held that the trial court was justified in holding that the non-removal of certain stone abutments and the leasing for a consideration of the right to maintain telegraph and telephone poles were not sufficient to establish an intention not to abandon the right of way for the purpose of maintaining and operating a railroad.

Stock—Margins—Broker's Right.

A decision of interest to persons dealing in stocks was rendered by Justice Brown in the Pennsylvania Supreme Court in the case of Armstrong et al. vs. Bickel. It appeared in this case that in November, 1900, the plaintiffs, a firm of stockbrokers, with offices in Pittsburgh and New York, sold "short" for the defendant 200 shares of Northern Pacific stock, which was borrowed from a New York concern, at a price between $60 and $70 per share. The sudden rise of the stock in May, 1901, necessitated a prompt call for margins. The defendant deposited margins to cover the stock up to $230 per share. In a brief space of time this was exhausted and the stock reached $700. To a second call, it was alleged, the defendant failed to respond, and the brokers, for their own protection, bought in the stock for the account of Bickel, and later brought suit for the loss sustained by them and recovered a verdict. The defendant appealed on the ground that the brokers at the time failed to give him inside information as to the condition of the market. Justice Brown, in the opinion affirming the judgment below, said that with the stock jumping $75 and $100 at a time, reaching $1,000 finally, the brokers were not bound to hunt the seller up and repeat to him every rumor that had come to them before they could take steps for their own protection. The brokers were in peril, and their right was to go into the market and purchase the stock at the best price for which they could buy it.

BUSINESS NOTES.

Oregon Apples for Siberia.

According to the Portland *Oregonian*, Siberia is the latest market for Oregon apples. It relates that a carload of Hood river's finest was recently shipped to Seattle, there to be reshipped for Vladivostok. The apples will have an ocean voyage of about thirty days. Upon arrival at Vladivostok a part of the consignment will go inland on the Siberian Railway. The apples are specially packed for their long journey, first being wrapped in paper and then placed in pasteboard compartments, as eggs are shipped. The apples are then wrapped in burlap and the box is roped to prevent the frequent handling from injuring the fruit. Arriving at their destination, they can only be used by the wealthier classes in Siberia.

New York Stock-Transfer Tax.

The receipts from the stock-transfer tax law during February amounted to $309,048, a decrease of $181,450 from a year ago. The returns from the first two months, amounting to $818,526, show a decrease of $583,293 from the corresponding period of 1906. The average of the two months is $409,263, as compared with an average of $571,721 in 1906, and of $478,146 for the seven months of 1905, when the law was in force. The appended table shows the returns from the stock-transfer tax by months from its enactment:

	1907	1906	1905
January	$509,478	$911,321	....
February	309,048	490,498	....
March	....	427,498	....
April	....	560,300	....
May	....	503,571	....
June	....	424,071	$446,301
July	....	106,046	308,790
August	....	795,000	477,784
September	....	608,629	372,501
October	....	617,466	405,784
November	....	539,720	607,152
December	....	516,534	728,409
Total	818,526	6,500,654	3,346,721
Monthly average	409,263	571,721	478,146

Railroad Statistics.

The Railway General Managers' Association has prepared a report for 1906 covering 313 operating railways and representing 206,960 miles, or 94 per cent., of the total mileage of the country. Compared with 1896 the number of locomotives increased 42.8 per cent. and their weight 82.8 per cent. The number of freight cars increased 51.5 per cent. and their total capacity 95.3 per cent. Net capitalization of all roads last year is estimated, on the basis of roads reporting, at $12,628,000,000, or $57,966 per mile of line and $40,296 per mile of track. Forty-three roads report for one year a total of $14,593,642 paid for permanent improvements and charged to operating expenses. Two hundred and eight-four roads report 226,986 stockholders. Earnings reports covering the 205,960 miles show: Gross, $2,246,421,166; net, $764,272,832, as compared with similar reports for 1905 covering 216,973 miles as follows: Gross, $2,082,482,406; net, $691,267,736, the increases being 7.8 per cent. and 10 per cent. respectively. Number of employees on 313 roads, 1,460,778, against 1,382,196 the previous year, or 707 per 100 miles of line, against 637 the previous year.

Hares Shipped from Maine.

A Maine correspondent of the Boston *Herald* states that "Maine is shipping 1,000,000 dead hares every year and eating 1,000,000 more, and yet the supply of live hares is said to be constantly increasing. Not only are immense numbers of hares shipped from Maine every winter—many of them going as far west as Chicago and as far south as New Orleans—but in the far north woods of Aroostook county, where there are many French-Canadian squatters, whole families make a great part of their winter living on hare pies and hare stews, which, by using plenty of fat in the cooking, make healthful and nourishing diets for several thousand industrious persons. None of the financial flurries which sweep among the money and stock markets of the big cities was ever known to affect the great hare industry of Maine. If the consuming centers become overstocked with frozen hares and the price drops below 5 cents per capita, the hunters load their sleds with dead hares, and, driving among the suburbs of cities and villages, sell their surplus stock to the poultrymen for 2 to 4 cents each. Despite the fact that nearly every carniverous bird or mammal that runs wild finds the hare its most reliable source of food supply from September to May, and though a million hares are sent from Maine yearly and as many more are used in human economy at home, the supply of hares seems to be gaining constantly."

The South's Industrial Progress.

According to the Chattanooga *Tradesman*, the new industries started in the south in 1906 numbered 6,441. By states the record is:

Texas	1,102	Georgia	368
Oklahoma	670	Arkansas	356
Tennessee	517	Mississippi	321
North Carolina	503	Kentucky	306
Alabama	487	South Carolina	285
Virginia	448	Florida	126
West Virginia	417	Indian Territory	124
Louisiana	411		
Total			6,441

This large addition to southern industry, as a whole, comprised the following:

Wood-working plants	1,179	Gas works	52
Development and implement companies	513	Tobacco companies	35
Mines and quarries	409	Fertilizers	34
Compresses and gins	286	Distilleries	27
Telephone companies	260	Glass factories	25
Natural gas and oil	259	Breweries	13
Electric light and power	238	Pulp and paper	10
Ice and cold storage	209	Steel works	7
Iron-working plants	204	Sugar refineries	7
Cotton and woolen mills	160	Tanneries	7
Waterworks	138	Car works	6
Brick and tile	133	Engines and boilers	6
Flour and grist mills	123	Rice mills	5
Hardware companies	117	Silk mills	4
Canning factories	101	Furnaces	3
Oil mills, cotton	63	Bridge works	3
		Miscellaneous	1,795
		Total	6,441

National Banks.

Since the act of March 14, 1900, 2,149 banks, with authorized capital of $56,018,500, have been chartered, the average capital being approximately $26,000. During the same time 1,158 banks, with capital of $136,262,800, were organized under the act of 1864; hence under both acts there have been chartered 3,307 associations, with authorized capital of $192,281,300. The average number of banks organized monthly from March 14, 1900, to February 28, 1907, was within a fraction of 40. During the period in question the net increase in number of active banks was 2,728, liquidations and failures numbering 505 and 74 respectively. The increase in capital stock was $260,791,180; in circulation secured by bonds, $333,362,578; in circulation secured both by bonds and lawful money, $341,940,292. From 1863 to March 1, 1907, national banks to the number of 8,571 have been chartered, of which 1,778 were closed by voluntary liquidation and 448 by failure. National banks organized since March 14, 1900, to February 28, 1907, by geographical divisions, were as follow:

	No.	*Capital*
New England states	40	$5,515,000
Eastern states	546	41,351,500
Southern states	830	45,858,500
Middle western states	934	58,692,500
Western states	759	25,266,000
Pacific states	193	14,897,800
Island possessions	5	700,000

Number of national banks in existence, authorized capital stock, etc., on March 14, 1900; October 31, 1906, and February 28, 1907:

	Mar. 14, 1900	*Oct.* 31, 1906	*Feb.* 28, 1907
Number of banks	3,617	6,225	6,345
Authorized capital	$616,308,005	$845,939,775	$877,099,275
Bonds on deposit	244,611,570	539,653,180	552,055,950
Circulation, on bonds	216,374,795	536,933,169	549,737,373
Circulation, lawful money	38,027,935	46,238,816	46,605,649
Total circulation	254,402,730	583,171,985	596,343,022

Snow on Cereal Reserves.

Snow, the crop reporter, estimates the farm reserves of wheat March 1 at 191,000,000 bushels, or 24.5 per cent. of the crop, compared with his estimate of 176,000,000 bushels last year, and has been exceeded but once, which was in 1903, when it was 196,000,000 bushels. This leaves available for export during the next four months and for stocks on July 1 about 107,000,000 bushels, against 110,000,000 bushels a year ago. He places the corn reserves at 41.2 per cent. of the crop, or 1,210,000,000 bushels. This is the largest reserve on record, and compares with 1,077,000,000 bushels a year ago. The domestic consumption has been and continues on an extraordinary scale, aggregating over 200,000,000 bushels more in the past twelve months than during the preceding year. In the seven surplus states the present reserve is 749,000,000 bushels, against 679,000,000 bushels last year, 577,000,000 bushels in 1905 and 789,000,000 bushels in 1903. Snow places the oat reserves at 326,000,000 bushels, or 34.9 per cent., the smallest, with one exception, in five years. Last year it was 371,000,000 bushels, or 37 per cent. Mr. Snow believes that the government report this month will show farm reserves of 180,000,000 bushels wheat, 1,200,000,000 bushels corn and 340,000,000 bushels oats.

CURRENT BUSINESS NEWS.

Commercial.

Exports of copper from the United States in February were only 9,072 tons, the smallest month's total since the summer of 1903, being a decrease of 6,729 tons from last year and of 8,436 tons from two years ago.

It is reported that a device to remove fuzz from cotton seed has been perfected by experts of the Department of Agriculture. Its general use in the cotton fields of the south, the officials say, would save 10 per cent. on a crop that has an annual value of about $250,000,000. Gravity drills now in use in planting wheat and corn cannot be used with cotton seed on account of the fuzz. The device just perfected by the experts removes the fuzz and will, it is said, enable planters to put cotton seed in the ground as easily as wheat and corn are planted.

The Department of State has issued the following notice, which should be kept in mind by business men and others in addressing letters to consular officers: "To insure prompt attention, letters upon consular business should be addressed to the American consul, at ——, ——. Such letters are opened and attended to by the person who happens to be in charge of the office. If addressed to the consul by name they are forwarded to him unopened if he should be absent, and a delay thus intervenes; if he should in the meantime have gone out of office they may wholly escape attention."

The month of February was exceptionally dry. The amount of precipitation over the greater portion of the country was exceptionally small, and no liberal supply of rainfall or snowfall has since occurred. What precipitation there was occurred along the Atlantic and gulf coasts and on the Pacific seaboard, leaving the main part of the interior of the country with little added moisture. Out of fifty-nine places reporting for the whole country, only eighteen show precipitation above normal for February. At the same time the temperature has been high, so that the soil has gained little moisture in preparation for the spring growth of crops.

The values of locomotives exported for the seven months ending January appear in detail as follows:

Exported to—	1907	1906	*Increase*
Europe	$347,850	$6,000	$341,850
British North America	913,651	198,740	714,911
Cent. America & B. Honduras	362,090	281,338	80,752

* Other than British Africa. † Decrease.

The following was the value of French foreign trade in the month of January of this and last year:

Imports—	1907	1906
Food	F80,518,000	F64,266,000
Raw materials	267,916,000	325,983,000
Manufactures	67,310,000	60,673,000
Total	415,741,000	450,852,000
Exports—		
Food	40,438,000	46,333,000
Raw materials	106,981,000	97,741,000
Manufactures	179,832,000	170,809,000
Post parcels	31,488,000	32,997,000
Total	358,739,000	347,880,000

Press reports from Paris state that the United States is likely soon to be confronted with the necessity for tariff negotiations with France. The special Parliamentary Commission, charged with the revision of the schedules, which probably will be considerably higher than the present rates, has decided to maintain the maximum and minimum system, with the former double the latter, for the purpose of forcing concessions from countries, like the United States, which refuse to make reciprocity treaties. A bill to increase the duties on cotton-seed and other vegetable oils, in which the United States is greatly interested, was called up in the Chamber of Deputies Tuesday afternoon. The duty now is $1.20 per 100 kilos. The bill proposes a duty of $2.80 for countries entitled to the minimum tariff and $5 for countries, like the United States, without reciprocity treaties, and also places cotton-seed oil, which is now free, on the dutiable list at 30 cents to 50 cents. Oils for industrial purposes, if denaturalized, will be taxed at the old rate.

The French Chamber of Deputies has, without discussion, rejected by 463 votes against 67 the clauses of a bill to suspend until July 1 the duties upon foreign maize. This measure was intended to permit the farmers to supply the present deficiency in fodder for cattle.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom and France—The outlook for the crop continues favorable. Spring sowing has commenced. Germany—There are moderate complaints heard of damage to the wheat crop as a result of winter-killings. Hungary—The weather continues cold, and the fields are only partially covered with snow. Roumania—An official report gives the outlook as favorable. Bulgaria—There are no complaints heard regarding the crop outlook, which, according to our last report, was favorable. Russia—From the southwest moderate complaints are heard; elsewhere they are only occasional. On the whole, however, the crop outlook is generally satisfactory. Arrivals at the ports show a small increase, and a fair development is expected at the reopening of river navigation. Italy and Spain—The outlook for the crop continues satisfactory.

The *Modern Miller* estimates farm reserves of wheat at only 180,000,000 bushels; corn, 1,245,000,000 bushels, and oats, 393,000,000 bushels.

The N. K. Fairbank Company estimate stocks of lard held in the United States, Europe and afloat therefor on March 1, with comparisons, as follows: March 1, 1907, 239,713 tierces; February 1, 1907, 204,511; March 1, 1906, 255,290; March 1, 1905, 332,450; March 1, 1904, 239,953; March 1, 1903, 151,011.

The fire loss of the United States and Canada in February, as compiled by the *Journal of Commerce*, shows a total of $19,876,600. The subjoined table affords a comparison by months with the losses of 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,900
February	25,591,000	18,249,350	19,876,600
Total	41,969,100	35,973,150	43,941,500

The Argentine corn crop is officially estimated at 66,400,000 bushels, against 181,600,000 bushels last year and 140,708,000 bushels in 1905.

Broomhall cables that wheat-crop prospects in southern Russia are favorable.

The value of iron and steel, excluding ore, exported in January, 1907, was $14,327,926, as compared with $12,990,436 in January, 1906. For the seven months ended January of this year the total was $101,659 748, as against $88,751,655, an increase of 14.5 per cent. The following table gives the important articles and value exported during the seven months' period ended in January:

	1907	1906
Bar iron	$1,433,677	$816,506
Billets, etc. (steel)	1,725,561	3,256,042
Rails	5,001,462	5,036,363
Structural iron and steel	3,866,472	2,731,782
Wire	4,838,228	4,230,771
Builders' hardware	8,363,387	7,557,377
Firearms	1,635,811	1,180,163
Electrical machinery	4,894,125	4,385,356
Metal-working machinery	5,268,752	3,593,844
Sewing machines	4,566,826	3,981,546
Locomotives	5,075,916	3,844,404
Typewriting machinery	3,411,355	2,603,755
Pipes	4,649,001	4,944,556

The value of iron and steel, excluding ore, imported in January was $3,296,062, as compared with $2,425,017 in January of last year.

The February statement of the British Board of Trade shows increases of £5,400,100 in Great Britain's imports and £3,302,200 in its exports. The principal increase in imports is in raw materials—£4,000,000 in cotton from America and £1,000,000 in wool from Australasia. The increases in exports were in fuel and manufactured woods. From these returns, imported goods re-exported being omitted, the following comparative table of the United Kingdom's February trade in merchandise may be compiled:

	1907	1906	1905
Imports	£52,928,935	£47,528,835	£42,844,937
Exports	32,083,323	28,781,123	25,269,063
Excess imports	20,845,612	18,747,712	17,575,874

The Kentucky state report for March states that the condition of the growing wheat is excellent. The condition is placed at 99, against 96 a year ago. This latter was followed by the May drought, but the crop was 11,500,000 bushels. The acreage sown last fall is placed at 92 per cent.

An agreement has been reached between the United States and German governments on the fundamental principles of the commercial treaty which the two countries have been trying for over a year to arrange. This declaration was made Thursday in the Reichstag by Herr Koerner, chief of the commercial department of the German Foreign Office. Herr Koerner expressed the hope that a definite treaty will be agreed upon shortly.

Financial.

The receipts of the United States government for February, which aggregated $53,925,497, exceeded those of February, 1906, by $5,730,769, while the disbursements, amounting to $45,720,315, were $1,999,617 larger. The receipts from customs, which have steadily grown for several years, were $3,721,277 in excess of February last year, and internal revenue receipts also show a gain of over $2,000,000. Of the increased expenditures $1,000,000 was due to the pensions granted under the new service pension law.

The coinage executed at the United States mints during February consisted of 12,728,000 pieces, valued at $11,936,385. The greatest number of pieces was nickels, of which 9,237,000 were turned out, with 3,321,000 cents next in order. The only silver pieces coined were dimes, of which 170,000 were minted. In addition, nearly 6,000,000 20 and 50 centavo pieces were coined for the Mexican government.

The output of gold from the Rand in February is estimated by London Kaffir houses at 470,000 ounces fine gold, a falling off, as compared with the January production, of 67,000 ounces. This decline was due to the Chinese New Year holidays. Reckoning one ounce roughly at $21.25, the value of the output is $9,987,500, as against $11,418,705 in January and $11,684,805 in December, the Rand's record month. Prior to the Boer war the high record of Transvaal production was $8,604,000, in August, 1899. Comparison of the value of last month's output with previous months, and with February in other years, is as follows:

Feb., 1907	$9,987,500	Feb., 1906	$8,658,320
Jan., 1907	11,418,705	Feb., 1905	7,726,850
Dec., 1906	11,684,805	Feb., 1904	6,148,630
Nov., 1906	11,328,125	Feb., 1903	4,173,695
Oct., 1906	11,481,850	Feb., 1902	1,728,910
Sept., 1906	10,727,875	Feb., 1901	None
Aug., 1906	10,812,915	Feb., 1900	7,499,450
July, 1906	10,445,000	Feb., 1899	7,564,300

In February receipts from the New York stock-transfer tax law amounted to $309,048, a decrease of $181,450 from February, 1906.

Replying in the German Reichstag Monday to the criticism that the rate maintained by the Imperial Bank was too high, Count von Posadowsky-Wehner, the vice-chancellor, said that this dearness of money was due to Germany's unparalleled activity in trade and industry, and that the bank was unable arbitrarily to maintain a low rate when the demands of commerce were so heavy. These demands have been greater in the last two years, he said, than ever before, and in spite of the high bank rate they were still extraordinary.

On Monday the ruling of the governing board of the New York Stock Exchange ordering that Anaconda be traded in in dollars and cents instead of on a percentage basis went into effect, and we have changed the quotations in our stock prices to accord therewith.

The New York State Superintendent of Banks, in his annual report on building and loan and coöperative and loan associations, shows that there were 262 associations doing business last year with total assets of $43,478,277, of which the national associations had aggregate assets of $8,222,087 and local associations $35,254,790. The total receipts for the year for all associations were $23,727,477. The associations made aggregate loans on mortgages of $9,116,162, and as cash on hand at the close of the year had $1,661,771. The number of borrowing members was 22,117. The associations held in mortgages on property $33,352,735. Twelve associations went into liquidation during the year, having assets, as shown by the reports of the previous year, aggregating $836,605. The total reported assets of the associations increased $949,036 during the year. As an evidence that confidence in well-managed institutions of this character is being restored, the report shows that the local associations issued during the year 233,126 shares, while only 175,654 shares were withdrawn. The net profits of all the associations for the year were $3,057,475, or a little more than 5 4-10 per cent. credited to members.

The enormous trading on the Stock Exchange Wednesday, with a total of 2,357,484 shares, the largest day of the year, brings to mind other days during the past few years when big days' totals were made. It was the largest day since August 20, one of the days immediately following the Harriman coup, when 2,731,865 shares changed hands. On August 17, the day on which the dividends were announced, a total of 2,524,637 was piled up. The largest days on record and the reason for the heavy trading follow:

Date and cause	*Shares*
March 6, 1907, Reading coup	2,357,484
August 20, 1906, after Harriman coup	2,731,855
August 17, 1906, Harriman coup	2,524,637
May 2, 1906, San Francisco earthquake	2,464,310
January 30, 1906, culmination of bull move	2,023,810
December 12, 1904, Lawson panic	2,891,000
May 9, 1901, Northern Pacific panic	3,122,850
April 30, 1901, end of Gates bull move	3,190,847

Owing to a bank clerk's error the bank clearings of Sioux City for the week ending February 28 were stated to be $1,259,725, whereas the correct figures were $2,259,725. Therefore the ratio of change over the corresponding week in 1906 was a gain of 27.4 per cent. and not a decrease of 28.9 per cent., as our table had it.

BOSTON CHICAGO BALTIMORE

Railroads.

Having granted a 10 per cent. increase in wages to its active employees, the Pennsylvania Railroad has raised the annual appropriation of its pension fund for retired employees by 35 per cent.—from $390,000 to $600,000 a year. Nearly $500,000, or to be exact, $467,614.47, in pension allowances was paid by the Pennsylvania Railroad to its retired employees in 1906. There are now 1,940 men on the pension rolls of the company. Since 1900 the pension department has distributed a total of $2,493,870.86, which gives an average for the seven years of $356,268.69. The number of employees retired and pensioned up to the present time is 3,031.

All Nebraska railroads have put into effect the 2-cent passenger fare under the law enacted last week.

At a meeting of the Trunk Lines Association, Wednesday, representatives of the railroads with Pittsburgh connections voted to increase the coal rates to the lakes 5 cents a ton.

Shipments of anthracite coal last month amounted to 4,563,720 tons, against 4,712,099 tons in the corresponding month last year. From January 1 to February 28 this year the shipments aggregate 9,813,666 tons, compared with 10,170,183 tons in the same period last year. Shipments of each company during February were as follows, compared with a year ago:

	1907	1906	*Changes*
Reading	927,220	1,027,347	Dec. 100,127
Lehigh Valley	772,410	826,343	Dec. 53,933

Total	4,563,720	4,712,099	Dec. 148,379

Industrial.

According to the *American Federationist*, 947 labor unions, with a membership of 102,510, reported 2.3 per cent. of such members without employment in January. In December the ratio of unemployed was 4.1 per cent., and in January, 1906, the percentage was 2.25.

Because of the high price and scarcity of goatskins, and because, it is said, the price of the finished product is not in keeping therewith, several morocco factories in Wilmington, Del., have closed down, and most of those in operation are running with reduced forces. Wilmington is a morocco-manufacturing center.

The Waltham Watch Company will try this year to produce 1,000,000 watches, the greatest in the history of the company. Last year the company turned out 644,000 watches, which is an average of 3,200 per day for the 285 days the factory was in operation.

The unfilled business of the United States Steel Corporation at present, compared with the showing on December 31 over a series of years, follows:

	Tons		*Tons*
March 6, 1907	8,300,000	December 31, 1904	4,696,203
December 31, 1906	8,489,718	December 31, 1903	3,215,123
December 31, 1905	7,605,086		

The three leading industries of Connecticut, based upon per capita productive power, according to the report of Labor Commissioner Scoville for 1906, are the making of rubber goods, brass and brass goods and leather goods. There are 936 manufacturing establishments of various kinds in the state, employing 134,710 persons, whose average hours of labor are 57.2 per week, who earn on an average $481 a year and whose gross productive capacity is $1,925 each. In the brass-goods trade 29,090 persons earn annually on an average $538, and who produce each goods valued at $2,928. There are eighty-five manufacturers. The trade in which operatives have the least productive power is that of general hardware, fifty-three plants employing 14,057 persons at an average yearly wage of $375, the product per individual being worth $987.

From 1901 to the present time the single county of Lancashire, England, has added more than 10,000,000 spindles to its cotton-spinning industry.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade conditions continue to improve, the tendency in this respect being the direct antithesis of that displayed in the stock market, where prices have been moving downward at a rapid pace. This movement has given rise to some pessimistic sentiments, but it is noteworthy that consumption of commodities throughout the country is going on at an enormous rate, and that high prices seem to have little, if any, effect on demand. At the moment country buyers are in the larger markets in goodly numbers, and the volume of house business done is of excellent proportions, exceeding in some lines even that of a year ago, when business was exceptionally brisk. Dry goods, millinery, hats and caps and, in fact, all wearing apparel are in the forefront as regards activity, an early Easter making for an early opening of spring trade. In such lines as cotton goods, some of which tend to further advances, it is not a question of procuring business, but rather one of making deliveries on orders booked months ago. Retail trade is opening up quite well, except in the east, where weather conditions have been unfavorable to shopping. As regards manufacturing lines, it is the old story of heavily filled order books and of capacity being worked to the utmost, despite which deliveries are backward. Country banks are in good condition and are in a position to maintain large balances in the city banks if they see fit to do so. Money rates hold firm on an active demand and rather poor supply. Collections, though satisfactory in some lines, are, on the whole, very backward, the tightness of money and the enormous volume of business outstanding being the main factors.

Business in foundry pig iron, taking the country as a whole, is of fair proportions, but, nevertheless, the disposition of buyers is to await concessions before buying for future wants. Here and there easier prices prevail, but, on the whole, sellers are remarkably firm in resisting declines. At the south business is somewhat more active for second-half delivery, and where contracts have been booked the basis was $18.50 for No. 2 Birmingham. Within the week the leading interest bought 5,000 tons of Bessemer pig for delivery this month, the price being $22, valley furnace. There is still a paucity of steel billets, a leading concern finding it necessary to purchase 5,000 tons from a new eastern plant, but, on the other hand, prices are off 50 cents a ton at Pittsburgh. A sale of some 6,000 tons of sheet bars for export the last quarter of the year is reported, and further negotiations are said to be under way. In finished lines activity is the keynote—full or overcrowded order books. Practically all the lighter lines fetch premiums where fairly prompt delivery is demanded. It is expected that a large tonnage of structural material, considerable of it for railway bridge work, will be placed this month. However, it is reported that the Gould system has canceled an order for 4,000 cars and 100 locomotives. Coke is easier, the supply being heavier. Anthracite coal is in active demand, owing to weather conditions. Supplies of bituminous are more liberal in the west, but higher freight rates make for steady prices, while in the east the trade is working into a better position as regards prices, but deliveries are backward because of the weather and the car shortage. Copper is dull but higher, as supplies are even lighter than they have been.

Prices of staples show little sympathy with the downward tendency in security quotations, and in the past month the drift has been rather upward. For the week the features in staples dealt in speculatively are the strengthening of prices of cotton and coffee and the irregular steadiness in grains. Bullish manipulation of an unquestionably very strong situation as regards trade and consumption is credited with causing the advance of 25 points in futures and of 20 points in spots this week. The unprecedented demand for cotton goods, with the highest prices in a generation, is a stimulus to bullish feeling as regards the raw material, offsetting at present the heavy receipts of old crop and the reports of a large acreage to be planted the coming spring.

Wheat, corn and oats eased early in the week, liquidation and short selling on the recent advance and liberal receipts at the interior, with an absence of crop-damage reports and export demand, being reasons assigned for the weakening. After a sagging of about 1 cent, however, the situation strengthened slightly, and practically the entire loss was recovered. Bad crop reports and green-bug damage in the southwest chiefly caused an advance of 1 cent on Friday. The fact is that the trade generally is just now speculating as to the size of the reserves held by farmers on March 1 this year, to be published early next week. Corn and oats similarly weakened, and strengthened later in sympathy with wheat. Stocks of wheat in farmers' hands a year ago were 158,000,000 bushels, or 23 per cent. of the crop; those of corn were 1,108,000,000 bushels, or 41 per cent. of the crop, and those of oats were 380,000,000 bushels, or 40 per cent. of the crop. The year of record stocks of wheat was 1899, when 198,000,000 bushels were held; that of corn was 1897, with 1,164,000,000 bushels, and that of oats was 1904, when 365,000,000 bushels were held.

Coffee continued the strengthening movement which began on February 20, and which caused an advance of 100 to 115 points on nearby futures. Spots in the meantime gained ⅜ cent. Desire to realize profits brought about a slight decline from the extreme advance, 10 to 20 points being taken off from Wednesday onward. Sugar has shown a disposition to improve further, raws advancing about 10 points on slightly smaller Cuban movement and good reports as to demand for refined, which is unchanged as regards prices, however.

Heavy liquidation and severe declines started in the New York share market this week have not been followed by any general or decided rallying tendency. The market continues nervous and depressed, sentiment being influenced both by the talk of renewed friction among prominent interests and of the closing out of enormous speculative and investment accounts for such parties. The railway share list, particularly the higher-priced stocks, bore the brunt of the movement, one of the sensational features having been, however, the rallies in Reading shares on short covering, attended by uncorroborated rumors of buying for control. The bond market has been dull and depressed. Foreign exchange shows a weak tone, demand sterling being 4.84.45.

Eastern shoe and leather manufacturers report trade quiet. The key of the situation is the spring demand, which so far is behind a year ago. Some factories are well caught up, and unless trade improves a short manufacturing season is looked for. Shoe shipments are 8.6 per cent. behind 1906. Leather is quiet, and sole-leather tanners are reported curtailing product, as much to bring prices of their products up to a parity with raw material as because of small takings by shoe manufacturers. Hides are easier and buying is of a hesitating character.

Bank clearings for the week ending March 7 aggregate $3,451,304,000, 34.5 per cent. over last week and 5.7 per cent. over the same week last year. More active stock speculation explains a large proportion of the increase. Outside of New York exchange amounts to $1,247,512,000, 22.6 per cent. in excess of last week and 11 per cent. over the corresponding week last year.

Business failures for the week ending March 7 number 172, against 194 last week, 177 in the like week of 1906, 190 in 1905, 200 in 1904 and 176 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending March 7 aggregated 2,251,303 bushels, against 2,857,420 bushels last week, 2,563,983 bushels this week last year, 1,285,956 bushels in 1905 and 4,095,944 bushels in 1902. For the past thirty-six weeks of the fiscal year the exports are 123,924,831 bushels, against 97,142,655 bushels in 1905-06, 44,703,372 bushels in 1904-05 and 185,525,588 bushels in 1901-02. Corn exports for the week are 2,631,572 bushels, against 3,360,456 bushels last week, 2,394,445 bushels a year ago and 1,756,706 bushels in 1905. For the fiscal year to date the exports are 45,315,183 bushels, against 86,817,163 bushels in 1905-06 and 48,129,937 bushels in 1904-05.

IN CANADA.

In Canada, as in the United States, the textile trades show greatest activity, and business is apparently limited only by the capacity of mills to deliver. At retail, winter weather makes for a fair degree of activity despite the advanced stage of the season. Predictions as to the present year are in a high degree optimistic, special activity being looked for in railway building and house construction. Labor scarcity is even now a bar to fullest activity, and there is talk of employing Asiatic labor on the new transcontinental line. Railroads are reported short of rolling stock and engines. Toronto reports leading jobbers contracting for entire textile-mill outputs for 1907. More buying for spring is reported in Winnipeg, confidence is marked, and collections, hitherto and still rather backward, tend to improve. Warmer weather has helped trade in British Columbia, and collection are good. February failures and liabilities fell 10 and 30 per cent. respectively behind 1906. Clearings at eleven cities for February gain 2.4 per cent. on last year, while they are 5.7 per cent. ahead for the two months' period. Failures for the week number 21, as against 42 last week and 34 in this week a year ago. Weekly clearings aggregate $79,661,000, an increase of 15 per cent. over last week and of 10 per cent. over this week a year ago.

TRADE REPORTS.

Business in the New York dry-goods market is large, cotton goods especially being in good demand at well-maintained prices. Silks are very active at steadily improving prices. Collections generally are good. Manufacturers of shirts and waists have orders booked that will keep them busy for months to come, and sales contracted, but not delivered, of hosiery, knit goods and gloves will about use up not only what stocks are on hand, but also what can be manufactured during the balance of the spring season. While prices are still high and some lines of merchandise scarce, the feeling prevails that they will not go any higher. The millinery trade is fairly prosperous, ostrich and fancy feathers are in good demand, and advance sales of women's spring hats are satisfactory. Business in rags and shoddy is practically at a standstill. Business in the wholesale grocery trade is satisfactory. In confectionery business is satisfactory, but collections are slow. Enormous receipts of eggs caused a drop of 8¾ cents. Flour is higher, with jobbers and dealers buying more freely. Supplies of both live stock and dressed meats equal the demand, which is firm and steady. Official statistics show that American-made automobiles are rapidly superseding foreign cars in this country, and business is active at firm prices. The hide, skin and leather market is quiet and trade rather dull, but prices are very firm and tend upward. Weather conditions help the rubber-goods trade to clean up stocks. Orders for china and glassware are very liberal owing to the presence of many out-of-town buyers. Weather conditions restrict the volume of business in hardware. Iron and steel are easier. Buyers of pig iron are less numerous and prices less stiff. Scrap dealers also report a quieter business, but steel merchants and electrical-goods manufacturers find a brisk demand for their goods. The latest advance in the price of paper has not checked trade, and the demand for the different lines continues. Furniture and carpets are quiet, and complaints of slow collections are heard. Real estate is fairly active. In the building trade, plans filed are mainly for mercantile structures. Shortage of cars is still felt in the lumber and building-materials trades, in which commodities prices are generally firm, and in some lines higher. Collections are more or less slow.

The following telegrams show trade conditions at the cities mentioned for the week ending March 8:

BOSTON.—Trade in dry goods is brisk. Backward deliveries of cotton goods are a source of complaint. Bleached print cloth is higher and sales are heavy. Dress fabrics are active. Leather is only fairly active. Hand-to-mouth buying prevails. Hides are weaker. Shoe manufacturers are only fairly well supplied with orders, and supplementary orders continue disappointing. A short season is expected; shipments dropped back. Nitrate of soda is in little better call. There is a fairly active demand for both grain and wood alcohol. Drugs are in seasonable call. Quinine in jobbing quantities is moving well, but opium is rather quiet. Dyes and tanning materials show no particular activity. There is a fair demand for house furnishing goods, and prices remain firm. Collections, although a little easier, are still slow. Turpentine has advanced 1 cent. Good orders for builders' materials are in sight as soon as weather conditions improve. Copper and metals are quiet. Old metals are active. Lumber prices are firm and demand fair. Anthracite coal is fairly active on account of cold weather. Bituminous coal shipments are badly retarded on account of weather conditions. Wholesale liquor dealers report satisfactory trade. Rectified whiskey is in good demand. Beer and ale are in increasing demand. Collections are fairly easy. Leaf tobacco continues to advance and dealers are buying for immediate requirements. A further decline is noted in the price of eggs. A quiet tone prevails in the general provision trade and collections are rather slow.

PROVIDENCE.—Demand in the machinery and tool line is firm, and difficulty is experienced in securing deliveries. Cotton goods remain high and scarce. Conditions are good and collections fair.

PORTLAND, ME.—Snow averages three to five feet in depth throughout the state. In consequence, the roads in many places are almost impassable. Country trade is curtailed, and jobbers report business quiet, and in some instances less than a year ago. The snow will have to disappear before active demand from country districts sets in. Conditions have been unusually favorable for lumbering, and an average cut has been secured.

NEW HAVEN.—Business in all manufacturing lines continues in large volume, and heavy future orders are reported in practically every instance. Owing to weather conditions, demand for builders' supplies has decreased materially, but reports would indicate considerable construction work ahead, with a consequent good demand for materials. Wholesale dealers of foodstuffs report a good volume of business and markets generally firm. Money is obtainable at regular rates, but collections appear to be quite slow.

PHILADELPHIA. — There is little change in textiles. Manufacturers, with the exception of the ingrain-carpet trade, have apparently all the business they can care for, and some mills are sold ahead for six or seven months. Dry-goods jobbers report a fair trade, but collections do not seem to improve. Flour is weak and business dull. Chemicals and dyestuffs are somewhat draggy, with little change to note in prices. Paints and glass are a trifle more active, but the market rules dull and featureless. Lumbermen report business good at steady prices, but there is only a moderate shipment of material, due to the weather. Hides and skins continue firm, with fair demand and good supply. Goatskins are firm, with fair demand, short supply and high prices. Glazed kid continues firm on fair demand. Leather continues strong though less active, and high prices prevail. Wholesale and retail shoe dealers report business quiet, but look for an improvement with the advent of Easter. Tobacco is less active, and new business comes more slowly to manufacturers of cigars. The scarcity of goods is expected to keep prices of leaf high. Liquor orders have been large and numerous through January and February,

weather conditions being favorable. The strength of the iron market is maintained, pig and finished materials are active, and immediate deliveries command an advance in price. Continued cold weather makes the demand for domestic coal good, and the bituminous trade is fair.

PITTSBURGH.—The only transaction in the pig-iron market during the week worth mentioning was the sale to a leading interest of 5,000 tons of Bessemer by the merchant furnaces of the valley for March delivery at $22. The market continues strong, and there is no evidence of any weakening on present quotations for second-half delivery. The spot iron supply is now very limited, and it is expected that a largely increased inquiry will shortly develop for third and fourth quarter iron. In finished lines there is still an optimistic feeling, and the market, if anything, is stronger, and the end of these prosperous conditions is not in sight. There has been a free movement of coke, and while there is a heavy demand, the supply is ample, and prices remain unchanged. Pig iron for spot delivery is quoted as follows at the valley furnaces: Standard Bessemer, $23; chilled basic, $22 to $22.50; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $3.25 and foundry coke $4 to $4.50, at the ovens. The general merchandise situation continues satisfactory and the outlook is considered favorable.

BUFFALO.—Jobbers report conditions generally good. Collections are up to the average, and staples are in good demand.

BALTIMORE.—House trade has been stimulated by the presence of large numbers of buyers. It is difficult to procure deliveries of ginghams ordered last fall. Scarcity of labor, heretofore largely employed, is greatly felt in the shirt, overalls and umbrella lines. Buyers from the eastern portions of North and South Carolina are buying sparingly, but western sections are taking the usual quantities. Manufacturers report the usual volume of business for the season in umbrellas, but orders for parasols are sufficient to keep them busily employed for several months; prices continue high and deliveries slow. Large stocks of harness, due to heavy buying last fall, have been carried over; demands for immediate wants are very moderate. Brush manufacturers are ahead of last year on orders and are working to full limit, but there is some complaint of slow delivery of raw materials; prices are steady. Woodenware jobbers are busy, business, at firm prices, being fully up to last year's. Advances in prices continue the feature in paper at wholesale; mill deliveries are backward; no immediate relief is expected. Business in crockery, glassware and brass goods is active, though sharp advances are noted in some lines, especially brass goods. Oyster packers report a poor season, and the present year shows a succeeding decline in receipts. Planters are shipping raw and shucked stock direct from the Chesapeake bay and its tributaries, thereby curtailing the business at Baltimore; fair prices, however, have been maintained. Demand for hardwoods has increased; stocks are light. Building-material line has been quiet, but a good order business is now on hand for near future deliveries. Wholesale drug business is satisfactory, with collections improved. The supply of money is somewhat below that of 1906; demand is active. On the whole, satisfaction is expressed at the volume of business done thus far in 1907. The wholesale millinery line continues to lead in volume of sales. Collections range from slow to satisfactory.

DETROIT.—Continued activity is noted in all mechanical and structural lines, with the labor market well supplied and at satisfactory wages. Materials and supplies appear equal to demand, though there is a scarcity reported in some grades of lumber. Prices in all lines are quoted firm, with a tendency toward a higher figure in some directions. With jobbers of general merchandise a satisfactory movement is reported. In some retail lines inducements are offered to stimulate trade, though the general tone is reported about normal for the season. Collections continue rather slow. The necessary capital for a new national bank, with a capital and surplus of $600,000, has been oversubscribed for, and its charter is about to be applied for.

CINCINNATI.—Retail stores are doing a good spring trade, a number of openings during the past week having stimulated business, especially in millinery and dress goods. In jobbing circles, dry goods, groceries and hardware appear to lead, and trade is in excess of last season. The iron and steel industry is very active. Rolling mills and pump factories are well supplied with orders, taken at good figures. Manufacturers of wood-working machinery are active, in some instances outputs being taken for months ahead. Collections are good in all lines, except drugs and jewelry. Lumber is active. Whiskey is firm.

CHICAGO.—Improved trade conditions prevail among retailers and jobbers. The west is going right along selling and consuming goods on a large scale, despite the breaks in prices of stocks in Wall street. Sales of dry-goods houses this week have been the largest on record for this season. Buyers were here in large numbers and stocked up freely. Clothing and shoes are also selling well. Finished products in iron and steel are having a large sale at full prices. In pig iron, while buying is small by comparison with recent heavy trading, there is a fair business under way, and furnacemen are slow to accept concessions in values. Coal is more abundant and an easy feeling prevails. Illinois railroads have ordered an advance of 10 cents per ton from interior points in this state to Chicago, effective April 15. Dry lumber is held with more firmness, stocks being light, and sales have increased. Groceries and paints are increasing in demand. Butter, eggs and potatoes are lower and poultry higher. Receipts of eggs are unprecedented. Cattle, hogs and sheep are higher. Receipts of all live stock are smallest since last August. Money is steady, demand fair. Interior banks buy paper freely. Collections are fairly good.

PEORIA.—Trade in both wholesale and retail lines is quiet, and collections are slow.

ST. LOUIS.—General trade continues good. Wholesale dry goods, shoes and millinery show marked gains. Sentiment seems to be changing in favor of the expectation of a continuation of good business regardless of the feeling in some large centers, which is believed to be due to speculation in stocks. Prominent merchants express confidence in the ability of the country districts to take care of all local business, and in addition to that the banks will be able to keep large balances with the city banks. It is the general belief that with the adjournment of Congress and the approaching time of adjournment of the various state legislatures, general business will begin to improve. There is some talk of damage to the winter-wheat crop in Texas and Oklahoma, but in other sections there is every indication for a large crop.

KANSAS CITY.—Wholesalers in dry goods, millinery, hats, caps, boots and shoes report a steady increase in volume of sales. Trade in hardware, drugs, groceries and provisions shows an improvement. Retail trade is good. Collections are fair.

MILWAUKEE.—Trade in retail lines is rather slack. With jobbers it is good. Collections are fairly satisfactory. Money is steadier.

SIOUX CITY.—Business in wholesale lines shows an increase over last year. Retail trade is quiet.

DAVENPORT.—Retail trade has been rather quiet. Most manufacturers are busy, and jobbers seem satisfied with the volume of business. A good demand for money prevails. Collections are fair.

ST. PAUL.—Trade conditions are very good in all lines, sales continuing in excess of last year. Collections are still behind those of 1906, although February nearly equaled last year, which was not a good one. The volume of collections in some lines was swelled by discounting of spring shipments, but there has been little improvement made in accounts which are behind, and the trade is resigned to wait till after seeding in North Dakota. Dry-goods lines still complain of inability to obtain sufficient goods to meet the demand.

MINNEAPOLIS.—Some lines report business only fair, but others say sales are in excess of a year ago. Collections are still backward.

OMAHA.—The outlook for spring trade is very satisfactory. Jobbers in leading lines report liberal orders. Retail trade shows some improvement. Collections are only fair.

LINCOLN.—Trade is improving and collections are fair.

CHARLESTON.—Wholesale grocers and provision dealers report trade good. Other lines are quiet. Truck growers expect to ship quantities of cabbages from this center about March 20. Collections are slow.

AUGUSTA.—Trade is improving and collections are fair.

JACKSONVILLE.—Hotels are full of tourists and business is good. Money is more stringent.

BIRMINGHAM.—Southern foundry No. 2 pig iron is quoted at $22 50 to $23.50 for prompt delivery. Trade in general is holding its own. Collections are fair.

MOBILE.—Jobbers report very satisfactory sales, but still complain of delay in receiving goods from the north. Collections are up to expectations. Spring is apparently at hand and retailers report good sales in seasonable goods. Exports for February amounted to nearly $500,000 more than in the same month last year. The Greater Mobile bill has been signed by the governor, but owing to the vast territory included in the bill, it is believed by conservative business men that steps can and will be taken to declare it unconstitutional.

MONTGOMERY.—All lines of trade show some improvement, but the volume is not up to last season. Collections continue slow.

CHATTANOOGA.—Dealers report a very satisfactory volume of business, with a bright outlook for spring. Collections range from fair to good.

MEMPHIS.—Wholesale business is improving and weather conditions are favorable. Retail trade is picking up, but collections are slow. The car shortage is still delaying the movement of cotton, lumber and other merchandise.

NASHVILLE.—Shoe jobbers report business fair. Dry goods and groceries are active and show an improvement from last week. Collections in all lines are fair to good. Retail trade is dull, owing to unseasonable weather.

LITTLE ROCK.—Trade conditions are quite satisfactory. Bank clearings continue to show a very material increase over former years, and collections are fairly good. Considerable cotton is still being received here, and indications point to an increased acreage this year.

NEW ORLEANS.—Retail merchants are having a good run on spring wear, the season apparently opening a month earlier than usual. Jobbers in most lines report rather active business, and prospects are looked upon as encouraging. Farmers are busily engaged preparing for crops, and if the weather holds as it is now there will unquestionably be a large acreage of staples. The crevasse in the Mississippi river below New Orleans has not done great damage, and work is now in process to close the break.

WACO.—Jobbers report a very satisfactory business. Collections are slow. Farmers are planting corn. The outlook appears favorable.

SAN FRANCISCO.—The feature of the week has been the passage of legislation preliminary to the transfer of the capital from Sacramento to Berkeley. High prices of material and labor are still hampering rehabilitation.

SEATTLE.—Stocks are being replenished by the arrival of overdue freight, and trade shows renewed activity. Lumber shipments east continue to go forward slowly. Wheat stocks are still small on account of the car shortage. Collections are fair.

SPOKANE.—Merchandise stocks are low, owing to the freight blockade. City and country real estate is active. Collections are slow.

TACOMA.—Real estate is much firmer and extensive building continues. Favorable weather conditions have improved trade generally.

PORTLAND, ORE.—Ideal weather conditions have stimulated trade and building operations. Collections show some improvement, and labor difficulties are to be contended with to some extent.

TORONTO.—Trade continues satisfactory. Retail business keeps steady and wholesale trade is active in all lines. Dry-goods men report that their early spring and summer trade is as heavy as in any former year. They are, however, much bothered by slow deliveries. Demand for dress goods has been so strong that many looms hitherto employed on men's suitings have been put on dress materials. As a result, woolens are generally scarce. The largest jobbers in the country are extending orders to the mills beyond any period ever known. It is reported that some houses have tried to contract for the entire output of some mills for 1907. Prices in all lines are high and holding very firm. Collections are generally good, but credits are considered with care. There is a good business moving in other lines. Groceries are fairly active, with canned goods, teas and dried fruits holding very firm. Hardware is fairly active, with prices steady to firm. Dairy products and grain hold firm. There is considerable firmness to live stock, and hogs and provisions tend upward.

MONTREAL.—Winter weather has made for a fairly good retail trade, although there is some lessening of activity in this direction. All branches of wholesale trade are doing an excellent business in spring and summer lines. Active preparations are going forward for outdoor work. The building interests expect very great activity in all parts of the country. The work of railroad extension will go forward still more briskly, and there will be resultant very great activity in iron and steel. There is talk of securing Asiatic labor for the construction of the new transcontinental road. Existing roads are short of rolling stock and of engines, and Canadian foundries will be kept exceedingly busy for months to come. Iron and steel prices hold firm. Dry-goods men are still complaining of the slow deliveries. Linens, silks and cottons are slow in coming forward, and woolens are also scarce. Country payments have in some cases a slow tone.

VANCOUVER-VICTORIA.—There is a generally good tone to trade all through this province. Since the arrival of warmer weather there has been a considerable increase of activity in general industries. Following this, retail trade has been more active and collections are good. A feature of trade is the firmness in values all round. Summer business promises to be the heaviest on record.

WINNIPEG.—There has been a much better tone to trade here and in the western country generally. A good many country merchants have been here and in the east placing orders for spring, summer and fall lines. Everywhere there is a feeling of great confidence as to trade the coming season, and orders are generally large. There is still some complaint regarding collections, but there are evidences of improvement in this regard. Groceries and hardware are moving well, and there is a big business doing in boots and shoes. Values in all lines hold firm.

FINANCIAL.

Money Market.

A prominent feature in this week's loan market was the hardening of rates for time money, the asked quotation for all maturities in that class of accommodation going up to 6 per cent., while considerable money was reported to have been placed at 5¾ per cent. Call money was also firmer, touching 6 per cent., and the renewal rate, which hung around 5 per cent. early in the week, advanced to 5½ per cent., and in some instances a little higher. Commercial paper was also inactive, with but little buying demand, and the quotations for prime names held at 6¼@6 per cent. The money market has been to some extent influenced by the liquidation and demoralization in stock-market circles, it being pointed out, however, that the selling of stocks and shrinkage of quotations should be productive of a substantial decrease in the loan accounts of the banks. The passage of the Aldrich bill by Congress seemed to have no particular effect, and some curiosity was expressed as to what policy the new Secretary of the Treasury, Mr. Cortelyou, will adopt in dealing with the banks. Attention has also been directed to the fact that applications have already been put in for the retirement of the full monthly amount of $9,000,000 of national bank notes allowed under the provisions of the new law, this being partly explained, however, by the fact that an agreement to retire some bank circulation was made between Secretary Shaw and the national banks last fall.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending March 7 shows an aggregate of $3,451,304,000, as against $2,564,007,000 last week and $3,263,056,000 in the corresponding week last year. Canadian clearings for the week aggregate $79,661,000, as against $68,839,000 last week and $72,336,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	March 7	*Inc.*	*Dec.*	*February 28*
New York	$2,203,792,000	2.8	....	$1,546,381,000

† Not included in totals because containing other items than clearings. § Not included in totals because comparisons are incomplete. * Last week's.

New York Banks.

The unexpected feature of last Saturday's bank statement was a decrease of $4,274,800 in the item of loans, which, however, was generally accepted as evidence that the preceding stock market liquidation had had its due effect in that connection. The cash items showed a loss of over $2,000,000, which was about $1,000,000 below the estimates of the actual movements of funds during the week, the discrepancy being to all appearances one of the results of the average system. On account of the above changes the deposits decreased $6,589,900, and the reserve requirements were $1,647,475 less, so that the falling off in the surplus reserve was only $450,000. The figures of the statement compare as follows with those of the preceding week:

	March 2	*February 23*	*Changes*
Loans	$1,079,185,600	$1,083,460,400	D $4,274,800
Specie	189,065,200	190,145,800	D. 1,080,600

Foreign Exchange.

A rather weak tone has developed in foreign exchange, actual business in demand sterling working down from around 4.84.70 to as low as 4.84.35, with corresponding heaviness in other classes of bills. While inquiry has been light, the supply of commercial drawings has been a fair one, and, in addition, bankers seem to have sold liberally against foreign subscriptions for recent issues of railroad and other securities. It is noted that banking authorities show a disposition at present to discourage speculative transactions in exchange, although it is presumable that there has recently been not a little short selling in the market. Little was heard in regard to the possibility of gold imports, although rates are again at such a level that under ordinary circumstances some operations of that kind might be arranged. It is noted, however, that the weekly return of the Bank of England was a decidedly poor one in respect to the proportion of its reserve to liability, and the London money market showed such distinct firmness that gold importations could only be made with a good deal of difficulty. Indeed, demands for gold for shipment to South America apparently absorb all the new specie which is coming into the London market at present.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 2	*Mar. 4*	*Mar. 5*	*Mar. 6*	*Mar. 7*	*Mar. 8*
4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½	4.81½ @ 4.85½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.84.60 @ 4.84.70	4.84.60 @ 4.84.70	4.84.50 @ 4.84.65	4.84.35 @ 4.84.55	4.84.40 @ 4.84.55	4.84.40 @ 4.84.55

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.80.30 @ 4.80.40	4.80.30 @ 4.80.40	4.80.15 @ 4.80.30	4.80.10 @ 4.80.25	4.80.10 @ 4.80.20	4.80.20 @ 4.80.35

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.85.15@4 85.20; commercial bills, 4.79½@4.80½; francs, 5.24⅜ less 1-16@5.21⅞ less 3-64; reichsmarks, 93 9-16@94½ less 1-32.

The Bank of England's discount rate is unchanged at 5 per cent. Its report for the week showed a gain of £640,000 in gold, but the proportion of its reserve fell from 47.22 per cent. to 44.82 per cent. There was also an increase of some £2,000,000 in the borrowings by the market from the bank. In the London open market discount is firm at 4¾@4⅞ per cent., and call money is 4@4¼ per cent. The Bank of France showed this week a decrease of 10,225,000 francs in gold holdings. Its rate is still 3 per cent., the Paris market for discount being 2⅞ per cent. At Berlin the bank rate remains at 6 per cent., the market for discount being quoted at 5¼ per cent.

BANK CLEARINGS AT 114 CITIES FOR FEBRUARY AND TWO MONTHS, 1907 AND 1906.

New York Securities Market.

Marked weakness on heavy trading prevailed in the stock market during the greater part of the week, heavy declines having been scored in a great many of the most prominent stocks, especially in those securities which have ranked heretofore as the leaders of speculation in the high-priced shares. The activity was on a very large scale, running up to over 2,000,000 shares a day, and while bearish operators were exceedingly busy, all the evidences went to show that the liquidation was for the account of important interests which had been forced to take such a course owing to money market conditions or the apparent impossibility of maintaining their position longer in the face of lack of public buying, and the certain degree of suspicion in regard to railway managements, which has been the result of the recent investigations and other matters. Various theories were, of course, propounded to account for the way certain prominent stocks behaved. It was, for instance, urged that the depression in Great Northern and Northern Pacific, which seemed to be the leaders of the movement, represented the selling out of the remaining holdings of the stocks in question belonging to the Union Pacific and its allied corporations. Reading was another stock which supplied much material for conjecture. Its weakness at first was on a par with that of the other leaders, but a sensational recovery of 10 points which it exhibited on Wednesday, thereby causing more or less of a substantial recovery in other directions, was popularly, though without any reasonable foundation, assigned to alleged buying for control by the Harriman or the Frick interests. The break in the Atchison stocks, which was another feature, was explained on the theory that there is no possibility of any further increase in the dividend rate on the common, and in the same way Southern Railway preferred, which was a cause of renewed weakness in the whole list on Thursday, was claimed to be in danger of a suspension or reduction of its dividends, it being pointed out in this connection that the earnings of the property have been decidedly unsatisfactory, and that a loss of some $1,300,000 in net during the past seven months would be ample reason for taking a conservative course as to dividends. At their meeting on Friday the directors, however, declared the usual 2½ per cent. on the preferred for the half year. There was, naturally, the usual amount of unfavorable gossip about such properties as Erie, the Gould stocks, the local traction issues, notably Interborough-Metropolitan, and a great variety of speculative specialties, although the enforced closing out of weak accounts would in most cases afford the easiest as well as the most probable explanation both for the way values melted and the feeble character of the rallies which ensued after the drops. One feature of the proceedings was the way in which the market disregarded any news of a favorable character. The passage by Congress of the Aldrich bill and its prompt signing by the President had hardly any effect, although it is recognized that the measure will have a tendency to give the new head of the Treasury, Mr. Cortelyou, enlarged powers in regard to coming to the money market's aid when such action is important. The really remarkable annual report of the Pennsylvania Railroad, which can be regarded as a vindication of that corporation's policy in the past of spending enormous amounts of new capital for improvements, was also without much effect, although Pennsylvania, while it shared in the general depression, was not the object of special selling pressure until Friday, when it became quite a bear feature. The industrials were naturally influenced by the declines in other directions, some of the important members of that group, notably American Smelting, suffering rather severe declines, but there did not seem to be the same pressure upon the industrial group that prevailed throughout the greater part of the week in connection with the railroad share list. Still, in Friday's closing transactions the United States Steel shares were objects of heavy selling and weakened the entire market.

Statistical Situation of Cotton.

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	219,381	272,511	157,880
Season	11,387,354	11,161,499	8,974,338

Boston Shoe and Leather Market.

Sole-leather tanners are said to be curtailing product, particularly union tanners. This same policy was adopted last year in order to bring prices up to a parity with cost of hides, and further increases are apparently considered necessary. Buying of sole leather is confined to small or moderate lots for immediate requirements. Grain leathers are quiet. Flexible splits are sold in advance, and demand is brisk. Heavy finished calfskins are selling well. Sheep-leather business is reported good. Hides are reported weaker, and buying is more hesitating than usual. Shoe factories are still well employed, but many are said to be approaching the end of orders, and unless late supplementary spring orders prove to be large, a short season is in prospect. There is no denying the fact that most manufacturers have considerably less business in sight than a year ago at this time. Shipments of footwear have dropped back to the average for the past two months, the figures of last year exceeding by over 11,000 cases. The following are the *Shoe and Leather Reporter's* statistics: Last week, 92,341 cases; preceding week, 93,121; last year, 103,970; total for 1907, 819,531; total for 1906, 897,199; decrease, 77,668.

Boston Wool Market.

The market, though perhaps rather quiet, is in a very good condition, prices holding very firm for such wools as are in demand, and no concessions are being made to make sales on other lots. The great firmness in London and the small stocks available locally are the main factors in maintaining the firm tone, and old wools, especially staples, are being well cleaned up at top prices. There is no contracting of moment in the west, high prices asked by growers and high rates for money preventing to a great extent. In Arizona the early shorn wools are about half sold, the best clips at 20 cents and heavy at 16@17 cents. Shearing will not begin in other sections for a month. Foreign wools have been active during the week, but mostly in approvals of the wools which have arrived, and which are showing up well and being accepted readily. Australian 64s to 70s have sold at 43@44 cents, and 46s to 50s at about the same price. The London sales will open March 12, when 167,000 bales will be offered. It is expected that prices will be maintained on merinos, but that low wools will be slightly

lower. Fewer Geelong merinos will be offered, but there will be much high class Sydney and Queensland crossbred and coarse luster wool from New Zealand. A steamer with about 1,300,000 pounds South American wool recently arrived in Boston, mostly for manufacturers' account, but some of this will come on the open market. Among the sales of domestic wool for the week were fine and fine medium territory at 22@23 cents, staple Montana at 23½@24 cents, staple Oregon at 23 cents, quarter-blood Ohio fleece at 33½@34 cents, Michigan quarters at 32½@33 cents, XX Ohio at 34@34½ cents, fall Texas at 23 cents and scoured fall California at 58@59 cents.

INSURANCE

1850—1906.

The United States Life Insurance Co.

IN THE CITY OF NEW YORK.

JOHN P. MUNN, M. D., - PRESIDENT.

FINANCE COMMITTEE:

JAMES R. PLUM, - - - - - - Leather.
CLARENCE H. KELSEY, - Pres't Title Guarantee and Trust Co.
WILLIAM H. PORTER, - Pres't Chem. Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

The Pennsylvania Railroad Company.

GENERAL OFFICE, BROAD STREET STATION,

PHILADELPHIA, 1st March, 1907.

The Board of Directors submit herewith to the Stockholders of The Pennsylvania Railroad Company a synopsis of their Annual Report for the year 1906:—

The gross earnings of all lines directly operated were		$148,239,882 44
Operating expenses		101,805,644 25
Net earnings from operation		$46,434,238 19
Deduct rentals paid roads operated on basis of net earnings		7,300,899 20
Net operating earnings of The Pennsylvania Railroad Company		$39,133,338 99
To which add:		
Interest from investments	$12,087,293 27	
Rental of equipment, and other items	696,968 92	
		12,784,262 19
Gross income		$51,917,601 18
Deduct:		
Fixed rentals of leased roads	$4,140,592 35	
Interest on bonded debt	7,387,652 11	
Interest on mortgages and ground rents, interest on car trusts, taxes, &c	4,715,055 92	
		16,243,300 38
Net income		$35,674,300 80
From this amount the following deductions have been made:		
Payments account Sinking and Trust Funds and principal of Car Trusts	$4,603,165 51	
Extraordinary expenditures	8,701,474 54	
		13,304,640 05
		$22,369,660 75
Dividends aggregating 6½ per cent		19,869,660 75
		$2,500,000 00
Amount transferred to Extraordinary Expenditure Fund		2,500,000 00
Amount to credit of Profit and Loss December 31st, 1905		$24,725,484 36
Profit from sales of Stocks and settlement of sundry accounts, etc	$15,200,848 66	
Deduct amount applied toward construction of New York tunnel line	$13,000,000 00	
Deduct amount transferred to Extraordinary Expenditure Fund.	2,200,848 66	
	$15,200,848 66	
Amount to credit of Profit and Loss December 31st, 1906		24,725,484 36

GENERAL BALANCE SHEET. (Condensed)

DECEMBER 31st, 1906.

ASSETS.

Miscellaneous liabilities	1,460,699 55	
		35,368,060 74
Sinking Funds and Trust Fund		9,331,604 07
Profit and loss		24,725,484 36
Total		$593,515,894 36

FUNDED DEBT.

The amount of funded debt, including mortgages, real estate, and ground rents, December 31st, 1906, was $191,561,270.82, being a decrease of $291,176.67.

SECURITIES OF OTHER CORPORATIONS.

The entire cost of the securities of other corporations held by your Company, December 31st, 1906, was $194,769,719.01, and the direct revenue received therefrom during the year was $11,741,184.33, being 6.03 per cent. upon the cost thereof.

It will be noted that there has been a large decrease in your holdings of the securities of other corporations. This is due to the fact that as the object sought through their purchase, viz., the promotion of a more conservative policy in the management of some of the large railways reaching the seaboard, and the doing away with unjust discriminations between shippers had been largely accomplished, and through the passage of recent amendments to the Interstate Commerce law and the enforcement of its provisions, the maintenance of tariff rates had been practically secured, it was deemed advisable to sell a portion of the securities heretofore acquired.

This sale covered all of your Chesapeake and Ohio Railway Stock and a majority of your holdings in the Baltimore and Ohio and Norfolk and Western Railways, and as a result thereof, a large profit has accrued to your Company which, as before noted, has been credited to your Profit and Loss Account.

CAR TRUSTS.

In order to supply the equipment needed for your traffic, a large additional issue of car trust securities was made during the year. This issue embraced the remaining certificates of the Pennsylvania Steel Rolling Stock Trust, $2,700,000; all the series of the Pennsylvania Steel Freight Car Trust, less the amount matured, $9,300,000; all the series of the Pennsylvania Steel Equipment Improvement Trust, $10,000,000, and twenty-two series of $1,000,000 each, and $218,000 of the twenty-third series of the issue of 1906 of the Pennsylvania General Freight Equipment Trust Association.

This latter Association has been created for the purpose of supplying through one instrumentality the equipment for the lines in the Pennsylvania Railroad system, and hereafter its certificates will be issued in series which will be designated not only by the letters of the alphabet but by the year of issue.

The total number of Car Trust cars now in service is 94,873, and the Car Trust certificates outstanding December 31st, 1906, aggregates $71,018,000.00.

TRAFFIC.

The number of tons of freight moved on the four grand divisions east of Pittsburgh and Erie in 1906 was 172,371,063, an increase of 15,367,296, or 9.79 per cent.; the number of passengers was 62,108,708, an increase of 6,326,899, or 11.34 per cent.

The other Railroad Companies east of Pittsburgh and Erie in which your Company is interested show satisfactory results. Detailed statements of their operations will be found in their respective annual reports, as well as in the full report of your Company.

FINANCIAL

The CITIZENS CENTRAL NATIONAL BANK

OF NEW YORK

Capital, Surplus and Profits, - $3,400,000
Deposits, - - - - $25,000,000

WITH one ribbon and its new three-color device

The New Tri-Chrome Smith Premier Typewriter

is virtually three typewriters in one. It produces indelible black, purple copying or red typewriting at the will of the operator. One ribbon and a small, easily operated lever do it all.

This machine permits not only the use of a three-color ribbon, but also of a two-color or single color ribbon. No extra cost for this 1906 model.

THE SMITH PREMIER TYPEWRITER CO.

CAPITAL STOCK AND FUNDED DEBT.—LINES WEST OF PITTSBURGH.

The prosperous condition of the manufacturing interests of the country, and the great increase in the consumption of ore, coke, coal, and other materials, as well as in the output of the finished product, has forced upon the lines on which the large iron and steel industries are located an exceptional expenditure for tracks, equipment, yards and other terminal facilities. This is especially the case upon the roads embraced in your Northwestern system; and in order to meet these demands and supply the Pennsylvania Company with the working capital needed for its general corporate purposes for several years, an issue was made April 2d, 1906, of twenty million dollars of four per cent. Collateral Trust Certificates, running for twenty-five years, with the right of redemption by the Company at any time after fifteen years. These certificates are guaranteed, principal and interest, by your Company.

It will be noted that after paying a dividend of six per cent. for the past year, making large contributions to its various Sinking Funds, and transferring $2,500,000 to an Extraordinary Expenditure Fund, the Pennsylvania Company carried a substantial balance to the credit of its Profit and Loss Account. The Pittsburgh, Cincinnati, Chicago and St. Louis Railway Company was also able, after making the payments required by its Sinking Funds and applying a substantial sum toward the principal of Car Trusts and to Extraordinary Expenditures, to increase its dividends to five per cent. on its preferred and three and a half per cent. per annum on its common stock and further add to its Profit and Loss Account.

The Vandalia Railroad Company also increased its dividend to four and a half per cent. and appropriated out of its surplus income $400,000 to an Extraordinary Expenditure Fund. This Company sold an additional $3,000,000 of its Consolidated Mortgage four per cent. Bonds, due 1955, in order to provide the necessary funds for its capital expenditures, and recoup its treasury for the amount expended in the redemption of $600,000 Terre Haute and Indianapolis Second Mortgage five per cent. bonds.

CAPITAL EXPENDITURES.

The amount of Capital Expenditures during the year on the Lines west of Pittsburgh for construction, equipment, and real estate was $9,781,235.44.

In these expenditures, were included large outlays upon track elevation in Chicago and Allegheny, upon the revision of line and extension of the double-track system on the Pittsburgh, Cincinnati, Chicago and St. Louis Railway, the improvement of yards, docks, and other terminal facilities, the increase of sidings, and especially upon additional motive power and equipment for both your Northwestern and Southwestern systems.

TRAFFIC.

The number of tons of freight moved on the lines west of Pittsburgh was 142,370,099, an increase of 17,184,429. The number of passengers carried was 30,413,560, an increase of 2,153,125.

The gross earnings of all lines east and west of Pittsburgh for the year 1906 were $295,898,165.24; operating expenses, $211,543,766.03, and net earnings, $84,354,399.21, an increase in gross earnings, compared with 1905, of $29,828,567.48, and an increase in net earnings of $10,385,149.87. There were 363,955,827 tons of freight moved on the entire system, being an increase of 37,978,938 tons, and 140,513,364 passengers carried, an increase of 14,509,825.

GENERAL REMARKS.

The Employés' Voluntary Relief Department, the Employés' Saving Fund, and the Pension Department show excellent results and are fully meeting the purposes of their organization. It has been found to the advantage of the Company, in the operation of the Pension Fund, to retire a more liberal percentage of the employés who have, after thirty years' service, reached an age between sixty-five and sixty-nine years, and the demands thus made upon the Fund will necessitate a larger appropriation. Your authority will therefore be asked to increase the annual sum set apart for that purpose from $300,000 to $500,000. It having also been determined that it is to your interest that the limitation on admission to the service shall be fixed at forty-five instead of thirty-five years, your approval of that change will be requested.

It will be recalled that at the meeting of the Shareholders in 1903, the necessary authority was given for an increase of the capital stock to $400,000,000. After setting aside the amount required for the conversion of the three and one-half per cent. Convertible Bonds of 1902 and 1905, there is, as appears from the following statement, but a small residue available for your corporate purposes.

Total authorized issue		$400,000,000
Outstanding December 31st, 1906	$305,951,350	
Amount required for the conversion of the 3½ per cent. Convertible Bonds of 1902 and 1905	80,702,350	
Amount required for the acquisition of the Stock of the Cumberland Valley Railroad Company	1,694,400	
Amount required for the acquisition of the Stock of the Philadelphia and Erie Railroad Company	4,485,200	
Amount required for acquisition of the Stock of the Allegheny Valley Railway Company	164,000	
Balance available for issue	7,002,700	
		$400,000,000

For the purpose of meeting the future needs of the Company, and in pursuance of the notice already given, the Shareholders will be asked to authorize additional stock to an aggregate of $100,000,000 and its issue from time to time, under such regulations as the Board of Directors may prescribe. But as it may be to the interest of the Company, to meet its corporate requirements through the issue of obligations bearing a lower rate of interest rather than through the issue of stock, authority will also be requested to increase its indebtedness, from time to time, to the same aggregate amount, in such form as may be found most available at the time of issue. The capital requirements of the Company for the current year will be met through the issue of $60,000,000 of three year five per cent. collateral notes; this being deemed more advisable than a sale of long-term bonds at the prices now prevailing for such securities.

The prompt recognition of the growing needs of the country for increased and improved railway facilities has resulted in the greater portion of the necessary additions and improvements to your road and equipment having been made on most favorable terms, both as to the cost of the work and the rates at which the funds were secured. But the demands for increased capital from other railways, influenced by the same reasons which governed your action, and substantially from all branches of industry, have made the present rates for money exceptionally high. This, together with the increased cost of labor and material, the legislation, both state and municipal, to increase taxes, reduce rates and fares, and force upon the railways large expenditures that yield no direct return, would seem to make it a wise policy on the part of your Company to reduce its capital expenditures to a minimum, avoid new undertakings, and restrict its expenditure for the present to such work as is now under way, and must be completed.

The movement of both freight and passenger traffic continues to show an exceptional increase, the volume and mileage for 1906 being greatly in excess of that for 1905, and much the largest in the history of the Company.

There was a very slight increase in the average rate and in the net earnings per ton per mile. It will be noted, however, that the higher scale of wages granted to your employes only went into effect on December 1st, 1906, and that there is a steady advance in the prices of all materials purchased by your Company, both of which must materially affect the cost of transportation.

After meeting all liabilities and paying dividends aggregating six and a half per cent., and the maturing principal of the car trusts, $4,246,039.34, there was a surplus of income of $11,201,474.54, of which $8,701,474.54 was applied toward the Extraordinary Expenditure of the year, and $2,500,000.00 transferred to an Extraordinary Expenditure Fund.

As already noted, the profit realized from the sale of securities of other companies was credited to your Profit and Loss Account; and against this profit there has been charged off on account of the cost of construction of your New York Tunnel Extension the sum of $13,000,000, and the balance of $2,200,848.66 transferred to the Extraordinary Expenditure Fund.

The heaviest outlays during the year, between Pittsburgh and Jersey City, in addition to that involved in the completion of this line, were upon your four-track system, yards and other terminal facilities, right of way and real estate, and the procurement of a permanent water supply.

One hundred and ninety-eight locomotives were added to your motive power, and the freight equipment of the Company was increased to the extent of 23,803 cars, through the issue of securities under the usual car trust arrangements.

The aggregate expenditures for construction, equipment, and real estate during the year upon your Main Line between New York and Pittsburgh, including $4,246,039.34 paid on account of the principal of Car Trusts, were $30,359,302.61, of which $17,411,788.73 was charged to capital account, and $12,300,157.01 against the income of the year. There was also charged against the income for the year the amount of $647,356.87 advanced to the Western New York and Pennsylvania Railway for right of way and real estate, the canal and dock improvements at South Buffalo, and the construction of the Ebenezer Branch. On the branch lines the main outlay was for sidings and additional terminal facilities, and aggregated $1,884,294.87.

The principal expenditures for the current year will be in completing the extensions of the four-track system now under way on the Middle, Pittsburgh, and Western Pennsylvania Divisions, upon the Tunnel Extension into and through New York and upon the Terminal Station in that city; upon the right of way and real estate required for the relief lines referred to in the last report, and upon additional motive power and equipment.

The progress upon the Tunnel Extension has been quite satisfactory, and while the work under the East River is somewhat slower in progress, that under the Hudson River was pushed forward so successfully that on the twelfth of September the laying of one of the tubes was completed through from Weehawken to Manhattan, and on the ninth of October the second tube was in place. The work of lining these tubes with concrete is now under way.

On the section between Harrison, the point east of Newark, where the Tunnel Line leaves your United New Jersey Division, and the Hudson River, many of the bridges have been constructed, and that over the Hackensack River largely completed, while the excavation on the approach to the Bergen Hill Tunnel and in the tunnel itself has made substantial progress. The excavation for the station site in New York between Seventh and Eighth Avenues is practically finished, and the foundations for a number of the columns necessary to support the station and the steel viaducts are being put in place.

The work under the streets between the North and East Rivers and in Long Island City beyond the East River is about two-thirds finished, and also about one-fourth of the excavation and lining for the four tunnels under the East River.

Large expenditures were also made upon the Philadelphia, Baltimore and Washington, West Jersey and Seashore, and Long Island Railroad systems.

It will be noted that the improvements, specially referred to in the report for 1902 as absolutely necessary to enable your traffic to be promptly and economically handled between Pittsburgh and New York, have, with a few exceptions, either been actually completed, or are rapidly approaching completion. The completed work covers the construction of the Brilliant Branch, of the elevated railroad along Duquesne Way, together with the new freight station at Pittsburgh and the terminal yards adjacent to that city, the construction of the double track freight road between Gallitzin and Petersburg and of an important part of the classification yards located thereon at Hollidaysburg, the building of the double track low grade freight line between York Haven and Glen Loch and of the Enola Yard in connection therewith, the construction of the double track elevated freight road through the West Philadelphia yards between the Main Line and the Delaware Extension and the Philadelphia, Baltimore and Washington Railroad, and the reduction of the grades on the Trenton Cut-off.

There is no question that but for the policy pursued by your management in this direction, it would have been impracticable to handle the enormous traffic seeking an outlet over your system; and the wisdom of making the expenditures necessary to accomplish this result has been clearly demonstrated. It must be borne in mind in this connection that in the five years from 1902 to 1907 the tonnage of the Main Line and branches has increased from about 77,000,000 tons to over 101,000,000 tons, and that of the four Grand Divisions east of Pittsburgh and Erie which are operated directly by your Company from about 134,000,000 tons to over 172,000,000 tons. The gross earnings of the Main Line have increased in that period from about $68,000,000 to over $88,000,000, and of the four Grand Divisions referred to from about $112,000,000 to over $148,000,000, while the net income of the Company after meeting interest on bonds, leases and other liabilities has increased from about $25,000,000 to over $35,000,000.

In order to temporarily provide the capital needed for the heavy expenditures made during the past year upon your lines east of Pittsburgh and Erie, it was deemed wise to utilize the powers of the Pennsylvania Company and thus make it further available for the purposes of its organization. To this end that Company made an issue May 1st, 1906, of $50,000,000 of its four and one-half per cent. eighteen months collateral notes, guaranteed by your Company. The proceeds of these notes were placed to your credit, and the Pennsylvania Company has been reimbursed for these advances largely through the sale of the securities heretofore held in your treasury.

The Shareholders have heretofore been advised of the necessity for securing a permanent supply of good water for your present and future needs, and of the continued pressure for additional equipment to meet the needs of your shippers. As stated in the last report, it was intended to secure a portion of the funds required for these purposes through the sale of short-term securities similar to the car trust certificates heretofore issued. But an opportunity having offered to place a loan in France, through banking institutions of the highest credit, on satisfactory terms, the Pennsylvania Company also made an issue under date of June 15th, 1906, of 250,000,000 francs, or about $48,000,000 of its three and three-quarters per cent. trust obligations, through the Girard Trust Company as Trustee, running for fifteen years but subject to redemption at par and interest on June 15th, 1918, or at any interest period thereafter. These obligations are guaranteed by your Company, and with their proceeds, the Pennsylvania Company has purchased from your Company the Car Trust and Water Certificates to an amount substantially equal to the proceeds of this loan.

The charges to CAPITAL ACCOUNT during the year were as follows:—

COST OF ROAD: Being expenditure on Low Grade Freight Line from York Haven to Glen Loch, on Pitcairn, Shire Oaks, Conemaugh, Hollidaysburg, Morrisville, and other yards, Duquesne Way Elevated Road, extension of four-track system on Main Line, double-tracking West Pennsylvania Division and on Branches, shops, stations and other facilities ..	$14,039,126 58	
Cost of South-West Pennsylvania Railway, absorbed	3,026,390 00	
Cost of York Haven and Rowenna Railroad, absorbed	1,300,000 00	
		$18,365,516 58
EQUIPMENT: Portion of cost of 198 locomotives		2,822,975 86
REAL ESTATE		549,686 29
Total charges to Capital Account for 1906		$21,738,178 73

The increase of CAPITAL STOCK during the year was as follows:

Issued in exchange for Convertible Bonds of 1902	$342,900 00
In exchange for Convertible Bonds of 1905	246,650 00
In exchange for Preferred Stock of Allegheny Valley Railway Company	2,812,900 00
Under allotment of Stock of 1900	1,500 00
In conversion of Dividend Scrip of May 31st, 1893	50 00
	$3,404,000 00

The attention of the Shareholders has already been directed to a Resolution passed by the Congress of the United States, on the seventh of March, 1906, under which the Interstate Commerce Commission was instructed to investigate and report, among other matters, whether common carriers by rail were interested in the ownership of the coal carried over their lines, and whether any officers or employes of such carriers, charged with the duty of furnishing cars or other facilities to shippers, were interested as owners or otherwise in the coal so carried.

It having been alleged in the course of this investigation, which was made *ex parte*, and without the safeguards incident to judicial proceedings, that employes of your company had failed to do their full duty to the Shareholders of the Company and to the public, and that this had resulted from their ownership of interests in corporations doing business with your company or over its lines, a special committee of five directors was appointed to thoroughly inquire into and report upon the matters referred to. This Committee has made an exhaustive inquiry extending over several months and reported its findings to the Board, and a copy thereof, as well as of their preliminary report, has been sent to each Shareholder. The Committee find, as the final result of its examination of the whole subject committed to it, that with few exceptions the officers and employes of the companies constituting the Pennsylvania Railroad system have been faithful to duty.

As a matter of pol cy, however, it has been determined that it is to the interest of the Company that none of its officers or employes shall have any ownership, direct or indirect, in any company, or interest in any firm or with any individual owning or operating mines located on your system or dealing in coals produced therefrom, or in any other business where such holding might in any way conflict with their duty to the Company or the Company's duty to the public. The necessary measures have been taken to enforce compliance with this regulation.

The Board have to record with deep regret the death on December 16, 1906, of Mr. Amos R. Little, who had served continuously as one of your directors since 1888 and whose kindly personality and devotion to the interests of the Company had won the warm attachment of his associates.

On the twenty-eighth of December the Company also lost by death its President, Mr. Alexander J. Cassatt, who had filled that position since June 9, 1899. The minute adopted by the Board refers briefly to the life-long connection of Mr. Cassatt with your service, and especially to his exceptionally important labors during his occupancy of the office of President. While that minute endeavors to record the value of his work not alone to your company but to the general railway interests of the country, it is difficult for words to express the feeling of regret and personal loss which the sudden and unexpected death of Mr. Cassatt brought to all those who were associated with him in the management of your affairs.

To fill the vacancy thus caused, Mr. James McCrea was elected President on the second day of January, 1907. Mr. Henry C. Frick was elected a director on the twenty-sixth day of December, 1906, in the place of Mr. Little, and Mr. Chas. E. Ingersoll on the twenty-third day of January, in the place of Mr. Cassatt.

By order of the Board,

JAMES McCREA, *President.*

Attest: LEWIS NEILSON, *Secretary.*

STOCKHOLDERS MAY OBTAIN COPIES OF THE REPORT IN PAMPHLET FORM ON AND AFTER 5th MARCH, 1907, ON APPLICATION IN PERSON OR BY LETTER TO LEWIS NEILSON, SECRETARY, ROOM 269 BROAD STREET STATION, PHILADELPHIA.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 16, 1907.

Announcements were made on last Thursday evening that the Treasury Department would come to the aid of the money market. Some action by the new Secretary, Mr. Cortelyou, in order to relieve the strain which has reappeared in connection with all classes of loans, and also in the commercial paper situation, had naturally been looked for. The most important feature of the new Treasury programme is the offer to at once redeem $25,000,000 of the United States 4 per cent. bonds which mature on July 1 next. Another measure of much significance is the permission given to collectors of customs outside of the city of New York to deposit the funds paid into their hands, so far as found desirable, in national bank depositories, under the same restrictions which apply to deposits of government funds derived from internal revenue collections. This last is in pursuance of the Aldrich bill, so called, which was passed in the last hours of the late Congress.

Much indefiniteness has hedged about the discussion of the subject of tariff relations with Germany, which has been going on in one form or another for two or three years. The earlier negotiations were very general and tentative, and were, in fact, carried on by diplomats who were not tariff experts. The work of the North commission was that of men specially informed, but the details of their suggestions are not generally known, and it may be that the attitude of the Senate in relation to agreements of the kind under consideration might render the ultimate adoption of such a tariff treaty more than problematical. It seems now to be accepted, however, that at least some sort of an agreement or modus vivendi is within the limits of probability. Last week a high official of the German Foreign Office said that an agreement had been about arranged with the United States regarding the principles of a commercial treaty, though the American delegates had no power to conclude a treaty. A couple of days later the German ambassador at Washington is reported to have informed Secretary Root that he had been authorized to enter into a modus vivendi for the purpose of preserving the status of the tariff relations between Germany and the United States. It is probable that this latter statement was an outcome of the exchange of views lately had at Berlin, and it seems likely that something more definite will be heard about the progress of negotiations in the near future.

Apparently the orders made by the President in July and October last withdrawing a large quantity of land from coal entry were rather more sweeping than the subsequently ascertained facts warranted. After looking them over, the withdrawal experts of the Geological Survey reached the conclusion that the value, as coal lands, of a large part of the tracts withdrawn was not such as to warrant their exclusion from entry. As the result of the examination made, the President has now directed the modification of the previous orders in relation to the lands in question. Under the new order, all lands now reported by the Geological Survey to contain no workable coal will be immediately released, while all lands which contain workable beds of coal, and concerning which the survey officials have sufficient information available to enable them to be properly classified, will be opened to coal entry as soon as regulations for making entry can be formulated. A similar procedure will be followed in future cases. It is understood that the President's order will have the effect of opening to entry about 28,000,000 acres of coal lands.

A point of no little importance was raised recently in regard to the bearing of the federal statutes against the importation of contract labor upon immigration to the south. An effort has been in progress for some time to attract to some of the southern states white laborers and artisans from abroad. In pursuance of this plan an agent of the state of South Carolina secured a number of such immigrants by means of advertisements in European countries, and he prepaid their passage with the understanding that they would be provided with employment on their arrival. The legality of this action was questioned, and the matter brought before Attorney-General Bonaparte at Washington. He rendered a decision holding that the state did not violate the alien contract labor laws existing prior to February 20 last, but that under the law approved on that date immigrants entering the country under circumstances similar to those recited above would be liable to exclusion. The matter has since been made the subject of a conference at the White House, at which the conclusion is said to have been reached that the action of the state of South Carolina would not be interfered with by the federal authorities provided a modification should be made in the practice followed so as to bring it without the inhibitions of the law. Whether that can be done is not at the moment certain, for the phraseology of the new provision is strict; but the state will have until July 1, at any rate, to pursue its endeavors to secure the immigrants it desires from abroad.

It is natural that the opening days of the second Russian Duma should be watched with much attention when the failure of the first attempt to develop a working Parliament is recalled. Thus far nothing of particular consequence has happened. The procedure of the Duma seems to lend itself to delay, and a considerable amount of time has been consumed in completing the work of organization. One of the results of the deliberate action taken particularly before the Committee on Credentials is a distinctly good one; there is a better acquaintance and doubtless a better understanding between the members than was the case in the former Duma. The Radicals have shown up strong in the earlier proceedings. It is noted, for example, that the Constitutional Democrats were compelled to abandon their own candidates for the vice-presidential places and to accept the nominees of the Radicals. Of course it is too early as yet to form an estimate of the temper of the Assembly, but observers seem to be impressed with the apparent recognition by the delegates of the importance of proceeding with caution in their dealings with the government. It cannot be denied that there are elements in the Duma that tend to extreme measures, and in the pursuit of them do not take sufficient note of time and occasion. Of this class are many among the so-called Social Democrats, who are viewed by some of their more conservative colleagues as constituting a greater actual menace to the continued existence of the Duma than even the reactionaries themselves. It is interesting to note that some of the peasant representatives are now counted among the most conservative members of the Duma.

This was indicated at the end of last week, when the Social Democrats asked for recognition, after the election of officers of the Assembly, for the purpose of moving a resolution declaring that "the Duma could not refrain from expressing gratitude at the solidarity of the fighters for political liberty now prisoners in the hands of the enemy, thanks to whom the Duma exists." The resolution further declared that "we refrain from demanding amnesty, realizing that no other force than the people in revolution is able to release them." Several of the parliamentary groups, such as the Constitutional Democrats, the Group of Toil and the Social Revolutionists, united against the resolution, and it was finally withdrawn. An effort is being made to get all the opposition parties into line with the view of pursuing a settled and definite course in dealing with projects of legislation. Up to the present this effort has at least been partially successful, though the Social Democrats cannot seemingly be prevailed upon to act in accord with their fellow delegates. As regards the attitude of the executive government toward the Duma, there seems to be little that can be profitably said at this time. Many credit Premier Stolypin with the disposition to give the Duma every chance to justify its existence, though believing that reactionary agencies will ultimately prove too strong for him. Others hold to the opinion that the delegates will not be able to organize a working Parliament, and that the ministry is impressed with this view and is content.

The executive order by which President Roosevelt put in effect the exclusion amendment of the new immigration law went into effect on Thursday. The fact is recited that whenever the President is satisfied that passports issued by any foreign government to its citizens to go to any country other than the United States or one of its insular possessions, or to the canal zone, are being used for the purpose of enabling the holders to come to the continental territory of the United States, to the detriment of labor conditions therein, the law makes it his duty to refuse to permit such citizens of the country issuing such passports to enter the continental territory of the United States. The order further says that upon sufficient evidence produced before him by the Department of Labor, the President is satisfied that passports issued by the government of Japan to skilled or unskilled laborers of that country or Korea, to go to Mexico, Canada or Hawaii, are being used by the holders thereof to come to the continental territory of the United States, to the detriment of labor conditions therein, and he therefore directs that such laborers be refused permission to enter. The legislative provision upon which the order is based is an interesting one, being, as will be seen, of a kind that commits a large share of control over the ultimate action of government to the Executive.

HEAVY FALL IN STOCKS.

An exact parallel between the disturbance which occurred in the Wall street stock market this week and stock market declines of the past is difficult to draw. While to the present generation of financial people and speculators it would vividly recall the events of May 9, 1901, when the Northern Pacific corner convulsed the market, or would bring to mind that famous day of disaster, September 20, 1873, or Black Friday itself, in the late sixties, it cannot be said that this week's fairly perpendicular drop in prices has been attended by as evil results. While failures have been absent and there has been none of the fear of a breaking down of institutions, it is nevertheless a remarkable fact that the declines which the market has experienced, not only from the high point of the present year or the extreme upward range of prices in 1906, but also in the net change of quotations in the three days from last Wednesday to Friday, exceeded in its severity anything the American stock market has ever known in its history. In the May panic six years ago, apart from the advance in Northern Pacific, the changes in prices were, on the whole, moderate as compared with the losses which the present week has witnessed, while the shrinkage since the early part of the year, ranging from twenty points or so in a long line of active stocks to something like sixty points in a stock like Union Pacific, is exceptional. As stated before, there has been an absence of failures, which even to the street itself seems truly remarkable, and it may furthermore be said that the excitement, excessive as it appeared, has not at any time been productive of the demoralization or the headlong rush to sell stocks, which is the dangerous element of a real panic.

At the beginning of the week the market seemed inclined to take hope from the reports regarding the conference between Mr. J. P. Morgan and the President, with the prospect it afforded of consultation in the near future between leading railroad officials and the Executive, with a view to arriving at what is termed a better understanding of what the government will require of the railroads. As the week progressed this was almost forgotten, and more attention was given to the evidences of world-wide strain in money, of which mention has been heretofore made in these columns. The essential soundness of the latter view was illustrated by the conditions of the money and stock markets both at London and Berlin, which, though reflecting to some extent the condition of affairs prevailing on this side of the ocean, also suffered both from liquidation in securities and from a condition of stringency in their money markets.

In this, as in all great previous declines in prices, there has been the usual searching about for the causes thereof. These have been variously assigned as being public hostility to the railroads; government (both executive and legislative) interference, as typified by the passage of the railway rate and other bills by the last Congress and the various state legislatures; numerous investigations by the Interstate Commerce Commission; and, lastly, and perhaps most effective of all, because now most notably pronounced at the height of the decline, the high rates of money. Certainly, there has been nothing in the course of general trade and distribution contributory to this trouble, and Wall street again has been the only blue spot in the country. It is conceivable, however, that the continuance of the present decline may have a sentimental effect on trade, though it should not be forgotten that the money liberated from stock speculation may be employed in regular trade channels where it is at present badly needed. If only this effect follows, the business interests of the country may well be congratulated.

Unquestionably, the calling of loans by banks, which have found margins impaired or have desired to complete arrangements for large financial payments in the near future, has made the situation acute this week. This matter of money is probably the most present trouble of all, because no chance of relief by application to foreign markets has been possible, these markets finding themselves burdened with home necessities. That the money trouble is a world-wide one seems certain, but so far the chief strain has fallen upon this country and upon New York, the chief money center. That the market is reaping some of the effects of the defiance of economic laws, witnessed in the pushing up of prices of securities in the fall of 1905 and several other periods since, in the face of 40, 50 and 100 per cent. money, seems evident from the liquidation so manifest recently in the badly inflated Pacifics and other stocks, in which "melon cutting" was so freely talked about a little while ago. Finally, there seems to be little escape from the reflection that the very high quotations reached for these stocks last year would not have been possible, if certain financial interests had withheld their active assistance, and it will be generally recognized that the attitude of the state legislatures and the national administration are not chargeable with the entire responsibility for the collapse in prices.

The following table illustrates just how far the readjustment in values has gone:

RAILWAYS.

	High, 1906	Low, 1907	Dec.
Atchison	110½	82⅝	27⅞
Baltimore & Ohio	125⅛	95	30⅛
Brooklyn Rapid Transit	94⅛	45¼	48⅞
Canadian Pacific	201½	167	34½
Chesapeake & Ohio	65⅜	37⅞	27¾
Chicago Great Western	23⅜	13	10⅜
Chicago, Milwaukee & St Paul	199⅜	*125	74⅜
Chicago & Northwestern	240	*141	99

Sloss-Sheffield	10,000,000	33	3,500,000
Southern Pacific	197,849,200	23⅜	47,000,000
Union Pacific	195,479,100	60¼	117,000,000
U. S. Steel	508,495,200	15½	79,000,000
U. S. Steel pfd	360,314,100	9⅜	36,000,000
Total	3,415,363,850	..	971,500,000

*Have no par value; certificates were distributed one for each share of Great Northern preferred stock.

There is here shown at one time, therefore, a loss in the market value of the capital of twenty-six leading railroads and industrials of 28 per cent. from January 1.

THE JAPANESE SCHOOL QUESTION AGAIN.

Once again the Japanese school question has reached an acute stage, and mainly through the intervention of President Roosevelt, the stage seems to have been passed. Press dispatches at the end of last week carried the news that several measures affecting the Japanese were being urged through the California legislature. The Senate on Saturday afternoon adopted unanimously a joint resolution declaring that it was opposed to further Japanese immigration, and urging the senators and representatives of the state in Congress to use all honorable means to secure the passage of a measure extending the immigration laws so as to include Japanese, Koreans and other Asiatic peoples. Furthermore, the resolution declared the proposition to naturalize Japanese and to extend the elective franchise to the alien born of that race to be inimical to the welfare of the American people. In addition, the Senate passed with unanimity two bills, one limiting the age of admission of all children when first entering the primary schools to ten years, except with the consent of the educational authorities, who might grant to older children the privilege of entering primary grades for the first time, and the other providing for the expression of the will and sentiment of the voters of California at the next election on the question of Asiatic immigration.

On Monday morning there was laid before the legislature, with a brief message from the governor of the state, a telegram from the President declaring that the action of the legislature, reported in the morning papers, was most unfortunate in its effect upon his efforts to secure the exclusion of Japanese laborers by friendly agreement, and that if continued it would probably render recent legislation of Congress for that purpose ineffective, and asking the governor to secure the suspension of further action until the receipt of a letter from Washington. The governor in his message said that he laid this telegram before the legislature for its most earnest consideration, suggesting that it seemed from the terms of the document that it was very important that no action be taken at this time which would prevent the national government from entering into friendly relations with the Japanese government tending to the exclusion of laborers from that country.

The receipt of these communications by the legislature produced a result that was as prompt as it was marked. Monday was the day set for the consideration by the Assembly of the measures which had already passed the Senate. When they were taken up it was at once seen that a great change had come over the temper of the legislators. Not only were the three measures killed by heavy majorities, but a resolution was carried that all anti-Japanese legislation be deferred. On the following day the governor laid before the legislature copies of telegraphic correspondence between him and the President, in which the latter emphasized the importance of not passing any legislation affecting the Japanese at this time while the national government is endeavoring to negotiate with that at Tokio. The latest incident in connection with the matter was the action of the San Francisco Board of Education in unanimously rescinding the resolution of last October which precipitated the question over the rights of Japanese residents in the schools, and adopting a resolution framed in accordance with the terms agreed upon between the President and the San Francisco authorities at Washington a short time ago. This fact was made known to the President and Secretary Root by the president of the Board of Education. The former thereafter signed an order putting into effect the passport amendment of the immigration bill, and directed the dismissal of the suit instituted by the federal officials to test the constitutionality of the law under which the school officials acted. It is to be hoped that the incident may now be regarded as closed, at least until the government has concluded its negotiations with Japan.

RAILWAY GROSS EARNINGS STILL OF GOODLY VOLUME.

While it is undeniably true that the railways are in for a period of comparatively reduced net earnings, the fact is that gross receipts are as good as one could expect in view of all the circumstances. To be sure, the ratios of increase reported in connection with gross revenue ever since November last have tended to seek lower levels; but, on the other hand, it should be remembered that comparison is made with a period when huge expansion was the order of the day in railway matters. This movement still continues, though not in so marked a degree as in the first ten months of 1906. In fact, current tonnage is of very heavy proportions, and while it is probably true that there has recently been some betterment as regards the car supply, it is likewise true that the shortage of rolling stock was very marked throughout practically all of February, the paucity in this respect resulting in embargoes being placed on cars. During the month just mentioned the movement of general merchandise, lumber and grain was of heavy volume, and, indeed, the entire trend of affairs may be summarized by saying there was a plethora of tonnage but a lack of rolling stock. Even shipments of cereals to primary markets, the movement of which had been very backward, improved

during February, the gain as compared with the like month a year ago being no less than 9 per cent., for which the larger shipment of corn is responsible, the increase in this item reaching 37 per cent. Therefore, in view of all the facts, it is not surprising to find that gross receipts in February exceeded those of the same month in 1906 by 2 per cent. on a total of $61,847,147. On the surface this is a small ratio of increase, but then it should be recalled that the gain in February, 1906, amounted to 25.6 per cent., and that meteorological conditions in the month this year were very dissimilar to those prevailing at the same time last year when, in short, traffic matters were almost ideal because of the open weather then experienced.

As it is, the majority of roads still report increased gross earnings, even though the volume of such gains are relatively of moderate proportions. Further analysis shows that the large losses returned by the Great Northern, Northern Pacific, the "Soo" line and the Southern Railway, the total of which amounts to $1,236,232, are reponsible for the moderate accretion in February gross earnings. Adverse weather conditions account for the decreases reported by the three roads first named.

The tale of undercurrents completed, we get down to the statistical facts, which are set forth in the following table, giving gross earnings for February this year and last:

	1907	1906	*Inc.*
Northwestern	$5,012,161	$5,591,501	*10.3
Central-western	12,321,072	12,142,673	1.4
Trunk lines	15,565,081	14,987,799	3.8
Southern	10,226,916	9,946,427	2.8
Southwestern	9,540,562	8,373,837	13.9
Pacific	9,181,355	9,570,840	*4.0
Total	61,847,147	60,613,077	2.0

* Decrease.

It will be observed that four groups report increases, while two contribute decreases, the southwestern showing the largest gain, 13.9 per cent., while the northwestern shows the heaviest loss, 10.3 per cent. The Pacific lines return a decrease of 4 per cent. The other changes not already mentioned display moderate accretions, the trunk lines showing 3.8 per cent., the southern 2.8 per cent. and the central-western 1.4 per cent.

Percentages being in order, this table, which illustrates the trend of gross earnings month by month for a series of years, becomes quite apropos:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	..	9.5	10.3	.05	14.5	6.7	7.4
April	..	11.7	8.7	4.5	14.3	11.2	8.9
May	..	14.7	9.5	3.5	12.0	9.0	9.2
June	..	13.3	6.3	.6	14.1	8.1	6.8
July	..	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11 2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	6.9	*1.4	11.5	8.0	10.5

* Increase. † Decrease.

Leading increases in February earnings, as contrasted with those of the like month in 1906, are set forth in the following:

Missouri, Kansas & Texas	$359,518
Texas & Pacific	285,495
Grand Trunk system	239,564
Lake Shore & Michigan Southern	232,951
St. Louis Southwestern	154,917
Colorado & Southern	117,173
International & Great Northern	113,000
Missouri Pacific system	103,000
Central of Georgia	94,579
Denver & Rio Grande	81,300
Cleveland, Cincinnati, Chicago & St. Louis	77,618
Michigan Central	67,995
Louisville & Nashville	66,833
Mobile & Ohio	64,321
Pittsburgh & Lake Erie	57,563
New York, Chicago & St. Louis	56,783
Total	2,172,610

The more important decreases appear in the subjoined:

Great Northern system	$531,386
Northern Pacific	511,753
Minneapolis, St. Paul & Sault Ste. Marie	111,686
Southern Railway	81,407
Total	1,236,232

By way of completing the record for the fiscal year to date, we have compiled the following table of returns of practically identical roads:

	1906-07	1905-06	*Increase*	*P. ct.*
July	$80,800,673	$70,805,720	$9,994,953	14.1
August	78,771,383	69,593,637	9,177,746	13.1
September	79,270,463	72,521,836	6,748,627	9.3
October	86,650,534	77,911,337	8,739,497	11.2
November	85,842,493	82,983,127	3,859,366	4.6
December	83,007,304	78,548,032	4,459,332	5.7
January	69,929,545	68,272,841	1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
Eight mos.	627,099,902	581,249,607	45,850,295	7.8

It will be seen that the gain in gross earnings for the eight elapsed months of the fiscal year 1906-07 amounts to $45,850,295, or 7.8 per cent.

A NEW HIGH LEVEL OF COMMODITY PRICES.

Prices of staple commodities displayed notable strength during February, cotton goods leading in this direction, as they indeed did in activity, over any other special group of articles. Other groups manifesting firmness or an advancing tendency were provisions, no doubt helped by the prolongation of severe weather. Breadstuffs also hardened, largely because of straitened supplies growing out of the car shortage, itself also a partial reflection of the stormy weather. In addition, mineral and vegetable oils, live stock, metals and naval stores advanced. In all, seven groups advanced, while five (including fruits, hides, coal and coke, some building materials and miscellaneous products) eased.

The net result of the month's movements in prices was a slight gain on March 1—four-tenths of 1 per cent., to be exact—over the level reached on February 1. BRADSTREET'S approximate index number on March 1, 1907, was $9.0293, a gain, as above stated, of four-tenths of 1 per cent. over February 1, an increase of 9.6 per cent. over March 1, 1906, of 9.7 per cent. over February 1, 1900, and of 58.3 per cent. over the abnormally low point touched on July 1, 1896. Fluctuations in the index number in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Oct. 1, 1905	$8.2298
July 1, 1896	5.7019	Nov. 1, 1905	8.2097
Jan 1, 1897	6.1164	Dec. 1, 1905	8.3014
July 1, 1897	5.8537	Jan. 1, 1906	8.3289
Feb. 1, 1900	8.2307	Feb. 1, 1906	8.2415
June 1, 1901	7.4181	Mar. 1, 1906	8.2321
Dec. 1, 1902	8.1413	April 1, 1906	8.2987
Aug. 1, 1903	7.7473	May 1, 1906	8 3054
Feb. 1, 1904	8.0973	June 1, 1906	8.3203
July 1, 1904	7.6318	July 1, 1906	8.2835
Jan. 1, 1905	8.0827	Aug. 1, 1906	8.3379
Feb. 1, 1905	8.0805	Sept. 1, 1906	8.4428
Mar. 1, 1905	8.0976	Oct. 1, 1906	8 5480
April 1, 1905	7.9996	Nov 1, 1906	8.7409
May 1, 1905	7.9700	Dec. 1, 1906	8.8923
June 1, 1905	7.9073	Jan. 1, 1907	8.9072
July 1, 1905	7.9160	Feb. 1, 1907	8.9853
Aug. 1, 1905	8.1111	Mar. 1, 1907	9.0293
Sept. 1, 1905	8.2795		

This table gives the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Feb.* 1, 1900	*Mar.* 1, 1906	*Feb.* 1, 1907	*Mar.* 1, 1907
Breadstuffs	$0.0524	$0.0658	$0.0772	$0.0777	$0.0817
Live stock	.1855	.2500	.3205	.3245	.3315
Provisions	1.3619	1.8033	1.8621	2.0903	2.1049
Fruits	.1210	.1472	.1496	.2070	.2003
Hides and leather	.8250	1.1725	1.1550	1.2062	1.1975
Textiles	1.5799	2.5065	2.5114	2.7048	2.7369
Metals	.3757	.6148	.6992	.8413	.8466
Coal and coke	.0048	.0067	.0070	.0082	.0080
Oils	.2082	.3284	.2975	.3181	.3328
Naval stores	.0402	.0807	.1105	.1164	.1170
Building materials	.0716	.0973	.0814	.0926	.0926
Chem. and drugs	.6607	.9260	.6892	.7083	.7083
Miscellaneous	.2150	.2315	.2715	.2899	.2732
Total	5.7919	8.2307	8.2321	8.9853	9.0293

The following table gives the movement of prices in detail during February:

MARCH 1, 1907, COMPARED WITH FEBRUARY 1, 1907.

INCREASES.

Wheat	Cheese	Silver
Corn	Coffee	Copper
Oats	Salt	Tin
Barley	Rice	Petroleum, crude
Beeves	Peas	Cotton-seed oil
Sheep	Cranberries	Olive oil
Hogs, live	Cotton	Rosin
Horses	Silk	Turpentine
Pork	Print cloths	Brick
Hams	Standard sheetings	Paper
Butter	Steel billets	Hay

DECREASES.

Flour	Raisins	Bessemer pig iron
Beef, carcasses	Currants	Quicksilver
Milk	Hides	Bituminous coal
Bacon	Hemp	Connellsville coke
Mackerel	Jute	Glass
Sugar	Cotton sheetings, southern	Opium
Beans	Pig iron, eastern	Hops
Lemons		Rubber

UNCHANGED.

Rye	Wool, Australian	Nails
Hogs, carcasses	Flax	Yellow pine
Eggs	Ginghams	Spruce timber
Bread	Iron ore	Hemlock timber
Beef	Pig iron, southern	Alum
Lard	Steel rails	Bicarbonate soda
Codfish	Tinplates	Borax
Tea	Steel beams	Carbolic acid
Molasses	Lead	Caustic soda
Potatoes	Anthracite coal	Nitric acid
Apples	Southern coke	Sulphuric acid
Peanuts	Petroleum, refined	Phosphate rock
Hemlock leather	Linseed oil	Alcohol
Union leather	Castor oil	Quinine
Oak leather	Tar	Ground bone
Wool, O. and Pa.	Lime	Cotton seed

It will be seen that thirty-three staples advanced, while twenty-three declined and forty-eight remained unchanged, on March 1, as compared with February 1. The changes as compared with March 1, 1906, appear in the following table:

MARCH 1, 1907, COMPARED WITH MARCH 1, 1906.

INCREASES.

Corn	Currants	Connellsville coke
Oats	Hides	Southern coke
Barley	Hemlock leather	Petroleum, crude
Beeves	Oak leather	Cotton-seed oil
Hogs	Cotton	Castor oil
Hogs, carcasses	Wool, Australian	Olive oil
Mutton	Jute	Rosin
Eggs	Silk	Turpentine
Beef, family	Flax	Tar
Pork	Print cloths	Lime
Bacon	Standard sheetings	Nails
Hams	Ginghams	Glass
Lard	Cotton sheetings	Yellow pine
Butter	Iron ore	Hemlock timber
Cheese	Eastern pig iron	Borax
Mackerel	Southern pig iron	Carbolic acid
Codfish	Bessemer pig iron	Alcohol
Molasses	Steel billets	Opium
Salt	Tinplates	Quinine
Rice	Steel beams	Tobacco
Peas	Silver	Paper
Peanuts	Copper	Hay
Lemons	Lead	Cotton seed
Raisins	Tin	

DECREASES.

Wheat	Potatoes	Linseed oil
Rye	Apples	Brick
Flour	Cranberries	Spruce timber
Sheep	Hemp	Hops
Beef, carcasses	Quicksilver	Rubber
Coffee	Bituminous coal	Ground bone
Beans	Petroleum, refined	

UNCHANGED.

Horses	Union leather	Bicarbonate soda
Milk	Wool, O. and Pa.	Caustic soda
Bread	Steel rails	Nitric acid
Sugar	Anthracite coal	Sulphuric acid
Tea	Alum	Phosphate rock

Here, seventy-one staples are found to be higher than a year ago, while fifteen are unchanged, and only twenty, less than one-fifth of all, are lower.

BRITISH CONSOLS AT LOW PRICES.

The report cabled from London this week that British consols, the great underlying security of the United Kingdom, had sold at 84¾, the lowest price touched since 1866, the year of the Overend-Gurney panic, and with that exception the lowest quotation reached for nearly sixty years, has served to draw attention to the fact that other markets than our own have been affected by the world-wide scarcity of money, or other causes. It is also noted in the cables that the decline has been considered more remarkable in view of the fact that it occurs coincidently with the calling in of large quantities of consols, due to refunding purchases by the British Treasury.

It is worth noting in connection with the decline here shown that changes in the rate of interest are properly chargeable with a portion of this decline. Thus in a large part of the last century the consols paid at least 3 per cent. interest. In 1888 the rate was reduced to 2¾ per cent., and in April, 1903, was reduced to the present rate of 2½ per cent. Thus, while the price has fallen below that paid during the Boer-war period, it should be noted that the interest return is ¼ per cent. lower. This in itself will not account for the present low prices, which are variously assigned to high money, excessive flotations of securities, the embarkation on a large scale of local governments in municipal trading, and a variety of other causes, all of which, however, point to the fact that low interest-bearing securities are and have been of late at a discount. It should also be remembered that British consols, unlike American bonds, which have an artificial value in connection with national banking requirements, sell on a purely investment basis. They differ also from the American securities in that they are not represented in all cases by a visible bond or certificate. Instead, the names of the subscribers are entered upon the books of the Bank of England, and transfers of ownership are made on and through these books, which fact does not render them quite so readily negotiable as our American bonds.

In the following table the high and low prices of British consols yearly from 1805 to 1907 are given:

	High	*Low*		*High*	*Low*
1805	62	57	1857	94¼	86½
1806	64⅝	58½	1858	98¾	93⅞
1807	64⅜	57⅝	1859	97⅜	88¼
1808	69⅛	62⅝	1860	95⅞	92½
1809	70⅜	63⅜	1861	94¼	89
1810	71	63¾	1862	94¾	90⅜
1811	66¾	61¾	1863	94	90
1812	63	55⅛	1864	92	87⅛
1813	67½	54½	1865	91⅞	86¾
1814	67½	54½	1866	90⅜	84⅝
1815	72½	61½	1867	96⅜	89¾
1816	65¾	53⅞	1868	96⅛	91⅞
1817	81¼	62	1869	94¼	91¾
1818	82	73	1870	94½	88¼
1819	79	64⅞	1871	94	91⅜
1820	70¼	65⅝	1872	93⅜	91¼
1821	78¾	68¾	1873	94	91⅝
1822	83	75⅜	1874	93¾	91¼
1823	85¾	72	1875	95¾	91⅝
1824	96⅞	84¾	1876	97½	93⅜
1825	94¼	75	1877	97⅜	93
1826	84½	73⅞	1878	98	93⅝
1827	89½	76¾	1879	99⅜	94¼
1828	88⅜	80⅞	1880	100¾	97⅜
1829	94¼	85⅜	1881	103	98¼
1830	94¼	77½	1882	102½	99
1831	84¾	74⅞	1883	102¾	99⅜
1832	85¾	81⅝	1884	102⅝	99⅝
1833	91¼	84¼	1885	103⅝	94⅝
1834	93	87½	1886	102¼	99¼
1835	92⅞	89¼	1887	103⅝	100⅝
1836	92¼	86⅝	1888	103⅜	99⅛
1837	93⅞	87⅞	1889	99¼	96
1838	95¼	90⅜	1890	98¾	93⅜
1839	93⅞	89¾	1891	97½	94¼
1840	93⅜	85¾	1892	98¼	95
1841	90⅜	87¼	1893	99⅜	97
1842	94⅞	88½	1894	103½	98⅜
1843	97⅛	92⅛	1895	108⅜	103⅜
1844	101⅜	96½	1896	113⅞	105⅛
1845	100⅝	91⅞	1897	113⅞	110
1846	97¾	94	1898	112⅞	108⅞
1847	93⅞	78¾	1899	111½	97¾
1848	90	80	1900	103¼	96¾
1849	97⅞	88⅝	1901	98⅛	91
1850	98⅜	94⅜	1902	97⅞	92⅛
1851	99⅛	95⅝	1903	93 13-16	86⅞
1852	102	95⅞	1904	91⅜	85
1853	101	90¾	1905	91 13-16	87⅜
1854	95⅞	85⅝	1906	91	85 9-16
1855	93¾	86¼	1907	87⅜	84¾
1856	95⅞	85¾			

The word "consol" is really an abbreviation of the two words "consolidated annuities," whose place it took by a series of fundings and refundings, the original consolidation taking place in 1751; but the history of the national debt of Great Britain, which the consol represents, runs back to the revolution which placed William of Orange on the throne. How

the debt has grown may be gathered from the following table:

Events	*Total debt*
1688—Revolution	£664,263
1702—Accession of Queen Anne	12,767,225
1714—Accession of George I	36,175,460
1727—Accession of George II	52,850,797
1748—Spanish war ended	75,812,132
1763—Peace of Paris	132,716,049
1775—American war begun	126,842,811
1784—American war ended	243,763,145
1792—French war begun	239,603,421
1802—Peace of Amiens	537,653,008
1815—Peace of Paris	861,039,049
1854—Crimean war begun	804,226,354
1857—Crimean war ended	837,144,597
1899—Boer war begun	628,021,572
1903—Boer war ended	770,778,762
1906	743,219,977

Finally, it might be said that it was during the Boer war that this country first became financially interested in British consols, because in 1901 about £12,000,000 of these securities came to the United States. Roughly speaking, 80 per cent. of the British debt is in the form of consols, and of this less than 10 per cent. is in the form of certificates or bonds, 90 per cent. being "inscribed," as the term is on the books of the Bank of England.

VISIBLE AND INVISIBLE WHEAT SUPPLIES.

The crop reporting board of the Bureau of Statistics of the Department of Agriculture finds the amount of wheat remaining in farmers' hands on March 1 to have been about 206,644,000 bushels, or 28.1 per cent. of last year's crop, as compared with 158,403,000 bushels, or 22.9 per cent. of the crop of 1905, on hand on March 1, 1906. The corn in farmers' hands is estimated at about 1,298,000,000 bushels, or 44.3 per cent. of last year's crop, against 1,108,000,000 bushels, or 40.9 per cent. of the crop of 1905, on hand on March 1, 1906. Of oats there are reported to be about 384,461,000 bushels, or 39.8 per cent. of last year's crop, still in farmers' hands, as compared with 379,805,000 bushels, or 39.8 per cent. of the crop of 1905, on hand on March 1, 1906. The following table shows the percentages of last year's crops of wheat, corn and oats on hand on March 1 in the sixteen principal grain-producing states:

	Wheat	*Corn*	*Oats*
New York	39	35	49
Pennsylvania	40	45	44
Texas	13	36	20
Ohio	35	43	38
Michigan	28	40	40
Indiana	26	44	30
Illinois	25	48	35
Wisconsin	37	39	43
Minnesota	30	36	43
Iowa	34	49	43
Missouri	23	43	38
Kansas	26	39	39
Nebraska	32	48	45
South Dakota	29	51	49
North Dakota	32	25	53
California	16	17	15
United States	28.1	44.3	39.8

The features in the above table are the large percentages of wheat held in the surplus states of the northwest, and similarly the heavy stocks of corn held in the heavy producing states. The stocks of corn and oats in farmers' hands for a few years past compare as follows:

	Corn	*Oats*
1907	1,298,000,000	384,461,000
1906	1,108,000,000	379,805,000
1905	954,000,000	347,000,000
1904	839,000,000	273,700,000
1903	1,030,652,000	365,000,000
1902	443,457,000	227,502,000

The showing as to wheat in farmers' hands gains value when compared with the visible stocks held at this date, and for this purpose the corresponding figures for a few years past are of value:

	In farmers' hands	BRADSTREET'S *visible, U.S. and Canada*	*Total supply*
1907	206,644,000	80,374,000	287,018,000
1906	158,403,000	75,428,000	233,831,000
1905	111,000,000	51,880,000	162,880,000
1904	132,600,000	53,589,000	186,189,000

There is here shown an increase of 23.1 per cent. in stocks over last year and of 76 per cent. over the stocks held on March 1, 1905. Just as a matter of contemporaneous interest, it might be noted that cash No. 2 red wheat in New York on March 1 sold at 83½ cents, as against 88¼ cents last year at that date and $1.21 at the same time in 1905.

It might be observed that the above report as to farm reserves had strikingly little effect on the market, which had what it considered a more live subject to deal with in the matter of reported crop damage. That there are some people who do not take the reports seriously may be gathered from the following from the Duluth *Commercial Record*, which says: "Probably the most ridiculous farce of the entire crop estimating year is that pertaining to the annual estimate of farm supplies of grain on March 1. So far as corn and oats are concerned, crops largely fed in the country where raised, a little thought would show how impossible of measurement they are. As for wheat, one has only to make a simple mathematical calculation to figure it out for himself. Assuming, of course, that the figures of the crop production were right—and, by the way, they are not right by nearly 50,000,000 bushels—one can start with farm reserves last July and get results much closer than the government does by its cumbersome and usually inaccurate methods. Below is the tabulation:

Farm stocks, July 1, 1906	45,000,000
Stocks, second hands, July 1, 1906	46,000,000
Crop, 1906	735,000,000
Total supply	826,000,000
Consumption, 85,000,000 at 5½, eight months	315,000,000
Winter-wheat seed	47,000,000
Exports, eight months, estimated	105,000,000
Stocks, second hands, March 1	102,000,000
Total distribution	569,000,000
Balance, being reserves in country March 1	257,000,000

These reserves of 257,000,000 bushels include country mill and elevator stocks, which may be 50,000,000 bushels, or may be twice that. More likely they are about 50,000,000 bushels more than on July 1 last, as the northwest alone has a total of 33,000,000 bushels. Putting them at 50,000,000—and everybody has a guess—farm reserves would be 207,000,000 bushels. If we are too low on country elevator stocks we will throw in the item of 50,000,000 bushels, by which amount the crop was underestimated."

ENGLISH COTTON-GOODS TRADE.

Manchester, March 1.—Cotton goods have been active in all departments. A fair number of new orders have been entered, and, on the whole, the volume of business on the books is as large as at the beginning of last month. Production is now on a very large scale, owing to new spindles and looms being started. Consumption, however, seems to keep well up with the amount produced, and stocks are seldom reported at the weaving sheds or at the mills. On the whole, manufacturers are not making the profits of twelve months ago, but still business is remunerative, especially for those who use their own yarn. To produce certain goods to-day from bought yarns is rather a lean business. Spinners continue to enjoy great prosperity, and the profits now being declared are better than ever before experienced. During the next month or two a considerable number of the new mills will start producing yarn, and it remains to be seen what effect this extra production will have upon the market. The American cotton situation has shown very little change. Egyptian cotton has advanced rapidly, prices being put up almost from day to day. Reports as to this crop's yield are excellent, but demand is very extensive, and everything grown will be needed by the spinners of the world.

In cloth for export a steady business has transpired for various markets. The outlook for India is encouraging, and an extensive business has been done in shirtings and also in finer goods. The turnover for China has not been important, but there is some expectation of a revival in the demand, now that the new year holidays in China are over. Various smaller markets have bought to an encouraging extent. South American markets have not been active, and discouraging reports come from the River Plate. Shirtings, especially in the medium and better qualities, have sold freely, and most producers are strongly fortified. Sateens and colored woven goods have met with a steady business.

In goods for home distribution, manufacturers have complained that orders have been small in extent, and that buyers have not been disposed to put down orders of any importance. Toward the close of last month a rather better feeling prevailed and more business was done. The wholesale establishments meet with a fairly satisfactory business, but considerable difficulty is experienced in obtaining adequate advances from retailers, and although the turnover compares favorably with last year, the margin of profit is not so remunerative. Buyers of heavy plain goods have adopted a hand-to-mouth policy in purchasing. Flannelettes, owing to the colder weather, have moved off rather better, and shopkeepers report better clearances. For the spring the outlook is healthy, and forward bookings are of an extensive character.

EDITORIAL NOTES.

It was to be expected that the proposition submitted to the stockholders of the Pennsylvania Railroad Company at their annual meeting, which was held in Philadelphia this week, would be duly ratified. In fact, no dissent was heard on the subject, and the authorized share capital of the corporation is thus raised to $500,000,000, an increase of $100,000,000, while sanction has also been given to the creation and issue of $100,000,000 of new bonds. As was originally announced, however, the question of when and in what manner the additional stock and bonds shall be brought out and sold is left to the judgment of the directors, who may issue the new capital in either form from time to time, and in such amounts as they deem necessary for the company's interests. This accords with the announcements already made regarding the intention of the management in asking the stockholders to clothe them with such power, and it will be recalled that when the last issue of $50,000,000 of notes was placed assurance was given that it fully provided for the Pennsylvania's capital requirements for about a year, thereby rendering it unnecessary for it to come into the money market as a seller of its bonds or stock during that period. It will, furthermore, be recalled that the policy announced in the recent annual report, of merely completing the improvements already under way, furnishes an additional reason for believing that the Pennsylvania will not soon again be among the railways which are obliged to come into the money market. Present monetary conditions, in fact, make it very apparent that the wisdom of the Pennsylvania's management in providing for its improvements on a vast scale far ahead of similar movements on the part of most of the railroads of the country has been justified by the general result.

While what are known as the Gould group of stocks had been especially weak features in the stock market, even prior to the recent severe general decline, rumors of a very unfavorable character had been busily circulated about Missouri Pacific, Wabash and their allied properties, some of the same having been duly noted in these columns within the last few weeks. This week, however, has brought a somewhat tardy, though slightly more reassuring, utterance from the head of the system, Mr. George J. Gould, who is quoted as saying that the unsettling talk about the maintenance of 5 per cent. dividends on Missouri Pacific stock are unfounded. In his remarks he furthermore called attention to the fact that the present low price for the stock did not represent its intrinsic value, and that the probabilities are that for the fiscal year ending on June 30 the company would be likely to show a surplus equivalent to 8½ per cent. upon its shares, notwithstanding the increase in operating expenses which is common to the railroads of the country in general. Another incident which has also been widely and diversely commented upon is the election a few days ago of Mr. Stuyvesant Fish, the former president of the Illinois Central, as a director of the Missouri Pacific.

According to the annual report of the American Tobacco Company, which covers its operations for the calendar year 1906, that combination is to be numbered among the industrials which enjoyed a very prosperous business during the period. The comparative income account for the last two years is given in the following tabulated form:

	1906	1905	*Changes*
Net earnings	$26,406,373	$25,212,285	I. $1,194,088
Interest and premiums	5,876,255	6,286,388	D. 410,133
Balance	20,530,118	18,925,897	I. 1,604,221
Total dividends	13,775,886	12,769,826	I. 1,006,060
Surplus	6,754,232	6,156,071	I. 598,161
Previous surplus	25,685,961	29,518,880	D. 3,832,919
Total surplus	32,440,193	35,674,951	D. 3,234,758
Cost of bonds purchased	1,886,304	9,988,990	D. 8,102,686
Final surplus	30,553,889	25,685,961	I. 4,867,928

It cannot be said, however, that the report contains reference to any incidents of importance, nor has the past year been marked by any new acquisitions, such as occurred with great regularity in the history of the enterprise. From this report it would seem that the American Tobacco Company has not as yet felt the effects of the organization of several combinations of rival concerns formed in the recent past. It might be noted that the company has continued its policy of retiring the 4 per cent. gold bonds, of which issue $2,437,000 were purchased during the year at a cost of $1,886,000, which was paid for out of the surplus earnings.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Notary Public—Woman.

The Supreme Court of New Hampshire has denied, In Re Opinion of Justices, the right of a woman to hold the office of notary public.

Assignment of Future Earnings Valid.

The Supreme Court of Ohio held, in the case of Rodijkeit vs. Andrews, that an assignment of wages to be earned in the future under an existing employment is valid.

Greater Pittsburgh Law Constitutional.

The Supreme Court of Pennsylvania, in a decision rendered this week, sustained the constitutionality of the so-called "Greater Pittsburgh" law, which permits the consolidation of Pittsburgh and Allegheny City.

Plumbers—License—Health Regulation.

The Supreme Court of Washington held, in the case of State ex rel. Richey vs. Smith, that an act requiring journeymen plumbers to secure a license as a condition of carrying on their trade was not a valid health regulation.

Real Estate—Sale—Commission.

The Supreme Court of Iowa held, in the case of Brown vs. Jennett, that a release of one's obligations upon a contract to purchase real estate, which he claimed to be void because made on Sunday, was a sufficient consideration for his promise to pay the broker's commission.

Married Woman—Note—Husband.

The Supreme Court of Errors of Connecticut held, in the case of Mathewson vs. Mathewson, that a wife had a right to enforce a promissory note executed to her by her husband under a statute replacing unity of property rights with equality in legal identity and in ownership of property.

Contract—Accounts—Default—Wages.

The Supreme Judicial Court of Massachusetts held, in the case of Sipley vs. Stickney, that the willful default of the manager of a farm to submit accurate accounts to his employer, as required by his contract, deprived him of his right to recover his stipulated wages although it resulted in no injury to the employer.

Insurance—Agent's Statements.

The Supreme Court of Wisconsin held, in the case of Whitman vs. Milwaukee Fire Insurance Company, that a present contract of insurance was not effected by the signing of an application followed by the statement of the agent that he would "see to it," "take care of it," so it would "be all right," and would "get a policy."

Interstate Commerce—Express—Price.

The Kentucky Court of Appeals held, in the case of Adams Express Company vs. Commonwealth, that a shipment by express without order by a dealer in one state to one whose name he has learned in another, with directions to the express company to collect the price before delivery, does not constitute interstate commerce.

Municipality—Lighting—Plant.

The Supreme Court of California held, in the case of Davoust vs. Alameda, that a municipal corporation, in maintaining and operating an electric-light plant under legislative authority but with no duty imposed upon it to do so, was exercising its private or proprietary rights within the rule making it liable for the negligence of its servants.

Sale—Price—Trust—Creditors.

The Supreme Court of Wisconsin held, in the case of Rosenheimer vs. Krenn, that the sale of property in a bona fide original transaction of bargain and sale at a price known by both vendor and vendee to be below its true value was not sufficient to charge the purchaser as trustee for the difference between price and value in favor of creditors of the vendor.

Liquor—Sale—Municipality—License.

The Supreme Court of Georgia held, in the case of The Southern Express Company vs. R. M. Rose Company, that municipal authorities, empowered by a city charter to pass ordinances prohibiting the illegal sale of intoxicating liquors within the city limits, had no authority to require an express company, delivering within the city liquors lawfully purchased outside of it, to pay a specified annual license fee.

Railroad—Carrier—Special Contract.

The Kentucky Court of Appeals held, in the case of Davis vs. Chesapeake & Ohio Railroad Company, that a railroad company did not lose its character of common carrier by a special contract to transport over its road the messengers and packages of a particular express company, although it could not have been compelled to undertake such transportation.

Note—Agent—Blank Indorsement.

The Supreme Court of Iowa held, in the case of Bettanier vs. Smith, that the mere exhibition by an agent for the investment of money, to his principal, of a negotiable note indorsed in blank as representing his money, and the acquiescence by the latter, did not constitute him a bona fide purchaser so as to entitle him to hold the note as against the true owner, who had placed it with the agent for safe keeping.

Right to Copy Property Records.

The Supreme Court of Nevada has, in the case of State ex rel. Nevada Title Guarantee & Trust Company vs. Grimes, sustained the right of an abstract company to copy real-estate records for the purpose of compiling an independent set of abstract books, under a statute providing that every recorded instrument of writing whereby any real estate may be affected shall impart notice to all persons of the contents thereof.

Bank—Liquidation—Trust—Creditors.

The Supreme Court of South Carolina held, in Ex Parte Savings Bank, that a bank taking over the assets of a liquidating bank upon an agreement that it will pay its debts and a certain sum to each shareholder assumes toward creditors the trust relation held by the transferrer, and that the creditors of the latter have a prior lien on the assets so transferred in case the transferee becomes insolvent before completing its undertaking.

Bankruptcy—Partners—Administration.

In the case of Dickas vs. Barnes, the United States Circuit Court of Appeals for the Sixth Circuit sustained the right of the court to require members of a partnership which had committed an act of bankruptcy to bring their property into the bankruptcy proceedings for administration, although proceedings would not under the statute lie against them individually because they belonged to an exempt class or had committed no act of bankruptcy.

Electricity—Eminent Domain.

The Supreme Court of Washington held, in the case of State ex rel. Harris vs. Superior Court, that the selling of electric power to the public generally was not a public enterprise for which the power of eminent domain might be exercised. The Supreme Court of Minnesota, however, held, in the case of Minnesota Canal & Power Company vs Koochiching Company, that the generation of electricity by water power, for distribution and sale to the general public on equal terms, subject to governmental control, was a public enterprise for which the power of eminent domain might be exercised.

Cashier—Appointment—Bond—Sureties.

The Supreme Court of Iowa held, in the case of The Wapello State Savings Bank vs Colton, that a board of trustees of a bank, after a general appointment of a person to hold the office of cashier at pleasure, may make a new appointment of the same person as cashier for a definite period, although he continues without interruption to occupy the position of cashier, and that the obligation of the bond given in connection with such indefinite appointment does not extend, in the absence of any language in the bond itself giving it that effect, beyond the termination of such definite term, so as to hold the sureties liable for defalcations occurring thereafter.

Life Insurance—Wife's Interest.

The New York Court of Appeals held, in the case of Bradshaw et al. Executors vs. The Mutual Life Insurance Company of New York, that under a life-insurance policy issued to a husband payable to his wife "for her sole use, if living, in conformity with the statute, and if not living, to their children," the wife, who had predeceased her husband without issue, would take no interest that survived her death, and that she could not therefore dispose of the policy by will. The court said that the interest of a married woman in a policy of insurance, even if construed under the statutes, is subjected to such limitations as are contained in the policy itself.

BUSINESS NOTES.

The World's Foreign Trade.

The imports and exports of leading countries were as follows in 1906, according to the British Board of Trade:

Imports—	1906	*Increase*	*Per ct.*
Great Britain	£607,987,893	£42,967,976	7.6
Germany	416,962,550	45,149,400	12.1
France	209,177,000	8,020,680	4.2
Austria-Hungary	85,365,666	*4,545,834	5.0
Belgium	123,022,000	6,625,040	5.7
Italy	96,963,793	14,380,845	17.4
Russia	63,011,200	6,090,700	10.7
Spain	31,982,356	2,562,567	8.7
United States	264,212,800	28,341,031	12.0
Exports—			
Great Britain	375,672,913	45,856,209	13.9
Germany	312,186,750	20,095,900	6.9

United States	359,621,400	34,223,400	10.5

* Decrease.

Building Operations in February.

Building in thirty-nine of the leading cities for February shows a decrease of 20 per cent. Permits were taken out, according to official reports to *Construction News*, for the construction of 8,756 buildings, involving a total cost of $29,511,748, against 9,272 buildings, at an estimated cost of $37,223,174, for the same month a year ago, a decrease of 516 buildings and $7,711,426, or 20 per cent. Figures follow:

	No. 1907	*Cost,* 1907	*No.* 1906	*Cost,* 1906	*P. ct.* gain
New York†	460	$7,320,702	560	$13,208,549	*45
Brooklyn	928	4,793,765	741	4,071,801	17

Total	8,756	29,511,748	9,272	37,223,174	*20

* Loss. † Includes Manhattan and Bronx.

Steel Output in 1906.

According to the American Iron and Steel Association, the total output of Bessemer steel ingots and castings in 1906 was 12,275,253 gross tons, against 10,941,375 tons in 1905, an increase of over 12 per cent. The production in 1906 was the largest on record. The following table gives the production of Bessemer steel ingots and castings, in gross tons, for the last six years. Of the production last year about 32,000 tons were steel castings, against 22,103 tons in 1905:

1901	8,713,302	1904	7,859,140
1902	9,138,363	1905	10,941,375
1903	8,592,829	1906	12,275,253

Below we give by states the production of Bessemer ingots and castings, in gross tons, since 1903:

	1906	1905	1904	1903
Pennsylvania	4,826,725	4,491,345	3,464,650	3,909,436
Ohio	3,769,913	3,131,149	2,050,115	2,330,134
Illinois	1,685,036	1,651,250	1,257,190	1,366,569
Other states	1,993,559	1,667,531	1,087,185	986,690
Total	12,275,253	10,941,375	7,859,140	8,592,829

The production of all kinds of Bessemer steel rails by the makers of Bessemer steel ingots in 1906 was 3,705,642 gross tons, against 3,135,729 tons in 1905, an increase of 569,913 tons. The maximum production of Bessemer steel rails by the makers of Bessemer ingots was reached in 1906. The following table gives the production by states of Bessemer steel rails by the producers of Bessemer steel ingots in the last four years (in gross tons). Included in the figures for 1906 are 144,738 tons of rerolled or renewed rails rolled by companies which manufacture Bessemer ingots:

	1906	1905	1904	1903
Pennsylvania	1,298,409	1,095,154	801,657	1,185,191
Other states	2,407,233	2,040,575	1,283,031	1,688,037
Total	3,705,642	3,135,729	2,084,688	2,873,228

In the following table we separate the production of rails weighing forty-five pounds and less than eighty-five pounds to the yard from those weighing less than forty-five pounds and over eighty-five pounds (in gross tons). Bessemer rails rolled by companies which do not make Bessemer ingots are not included:

	Penn'a	*Other states*	*Total*
Under 45 pounds	130,351	92,997	223,358
45 pounds and less than 85	548,132	1,060,661	1,608,793
85 pounds and over	619,916	1,253,575	1,873,491
Total	1,298,409	2,407,233	3,705,642

The total production of rails in 1906 will include rails made from open-hearth steel, rails rolled from purchased blooms, crop ends and "seconds," rails rerolled or renewed by non-producers of steel ingots, and iron rails. The total from all these sources in 1905 amounted to 240,200 tons, of which quantity 183,261 tons were open hearth steel rails, 56,618 tons were Bessemer rails rolled by non-producers of Bessemer ingots and 318 tons were iron rails. In 1906 the total from these sources will amount to about 300,000 tons, making the total rail production for that year about 4,000,000 tons. In 1906 we exported 328,036 tons of steel rails and imported 4,843 tons.

State Banks in New York.

The condition of the state banks of New York City on February 26, as shown by their official statements to the Superintendent of Banks, as published by the Clearing House, is thus shown to have been, the return being compared with that of November 14:

Loans and discounts	Inc.	$5,004,400
Due banks and trust companies	Inc.	417,400
Due other depositors	Dec.	2,442,700
Due from banks and trust companies	Dec.	3,072,500
Due from reserve agents	Inc.	3,962,100
Specie	Inc.	4,208,200
Legal tenders	Inc.	550,800
Total cash	Inc.	4,759,000

The follow table shows the figures of the present return, compared with that of November 14 and with a year ago:

	Feb. 26, 1907	*Nov.* 14, 1906	*Feb.* 20, 1906
Capital	$25,925,000	$24,025,000	$22,222,700
Loans and discounts	261,955,400	255,951,000	239,899,820
Deposits—			
Due banks and trust cos.	43,127,400	42,680,000	37,951,700
Due other depositors	336,405,700	338,848,400	267,203,900
Preferred deposits	16,399,400	15,423,000	*
Securities and mortgages	26,056,200	24,678,400	22,036,600
Due from banks and tr. cos	15,190,100	18,262,600	29,479,800
Due from reserve agents	17,030,300	13,068,200	*
Specie	40,177,200	35,969,000	31,774,400
Legal tenders	20,348,100	19,797,300	18,925,400
Total cash	60,525,300	55,766,300	50,699,800

* Included in other accounts.

Lake Superior Iron Ores.

Rail and water shipments of iron ore from the Lake Superior district amounted in 1906 to 38,522,139 long tons, an increase of 4,168,683 tons over 1905. This total includes 128,742 tons from the Baraboo range in Wisconsin, which is outside of the Lake Superior district proper, but does not include 121,555 tons from the Michipicoten range in Canada, which was chiefly used in the blast furnaces at the Sault Ste. Marie. The rate for last season from Duluth to Lake Erie ports was .083 cent per ton-mile, on an average—not quite 1 cent paid for the carriage of a ton of ore twelve miles. During the half century which has passed since the first shipments of lake ore were made, records have been carefully kept, and the *Engineering and Mining Journal* gives the total shipments from each range from the beginning to the close of last season. These will be found in the following table, with the figures for 1906, in long tons:

Range—	1906	*Total*	*Per ct.*
Marquette	4,057,187	80,857,801	23.9
Menominee	5,109,088	58,676,485	17.3
Gogebic	3,641,985	50,476,665	14.9
Vermillion	1,792,355	25,490,259	7.5
Mesabi	23,792,782	122,742,838	36.3
Baraboo	128,742	327,846	.1
Total	38,522,139	338,571,894	100.0

To show the importance of lake ores to the iron trade the following table, in which the pig-iron production for two years is arranged by districts, with special reference to the general character of the ore supply, is given:

	1905	1906	*Increase*
N. England, N. Y. and N. J.	1,525,094	1,952,288	427,194
Maryland	332,096	385,709	54,613
Southern states	2,887,577	3,080,507	192,930
Pennsylvania	10,579,127	11,247,869	668,742
Ohio	4,586,110	5,327,133	741,023
Illinois	2,034,483	2,156,866	122,383
Northwest	640,119	742,779	102,660
West of Mississippi	407,774	413,040	5,266
Total	22,992,380	25,307,191	2,314,211

The use of local ores has made certain advances, and mines are being actively worked in the Lake Champlain and Hudson river regions, in New Jersey and in the Lehigh valley and Cornwall districts.

CURRENT BUSINESS NEWS.

Commercial.

The table which follows shows the importations during the seven months ending with January, 1907, of the principal articles brought in for use in manufacturing:

Articles—	1906	1907
Cement (pounds)	215,472,219	744,183,111
Cotton (pounds)	38,632,979	45,028,113
Fibers (tons)	171,916	177,729
Hides and skins (pounds)	232,405,030	202,367,539
India rubber (pounds)	30,771,418	40,848,850
Pig iron (tons)	150,047	283,020
Potash (pounds)	208,912,828	247,803,874
Copper pigs, bars, etc (pounds)	90,616,322	108,241,211
Lead in ore (pounds)	101,494,465	74,682,301
Silk, raw (pounds)	8,441,546	11,102,466
Tin in pigs, bars, etc. (pounds)	51,486,576	58,504,863
Leaf tobacco (pounds)	19,240,476	22,815,985
Wool, unmanufactured (pounds)	100,180,796	95,339,555
Wood, unmanufactured (dollars)	16,889,020	20,307,302
Chemicals, drugs, etc. (dollars)	42,117,119	46,995,699

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom, Italy and Bulgaria—The outlook for the crop continues favorable. France—The weather is fine, and the outlook for the crops is favorable. Supplies are fair. Germany—The weather is milder, and it is impossible at this time to ascertain with any degree of accuracy the extent of the damage by winter-killing. Native supplies of grain are fair. Hungary—Snow has entirely disappeared, but there are no complaints heard. Roumania—The weather is cold, but the crops are well protected by snow covering. Stocks at Braila are increasing. Russia—Reports regarding the crop outlook are mostly of a satisfactory tenor. Arrivals at ports are very small. Turkey—Reports are mostly favorable. Spain—Moderate damage to the crop is admitted.

"We do not advise," says the Charleston *News and Courier*, "the farmers of the south to cut down the acreage in cotton this year in order that production may not be too great. We think that they should plant in cotton every acre that they can reasonably expect to cultivate with care, and to produce upon them every ounce of cotton possible provided, always, that they do not neglect the crops of corn, small grain, vegetables and fruit absolutely necessary to profitable farming in South Carolina. Equally important is it that they must not neglect the raising of cattle and other live stock and poultry. There is no farmer who can neglect to raise a mule while mules are worth from $200 to $300 without losing from $100 to $200."

It is pointed out in an article translated from a Russian journal by *Dornbusch*, that, in addition to German rye in the St. Petersburg, Moscow and mid-Volga trading centers, not only German but even American wheat has made its appearance, and Roumanian wheat and oats in the southern ports. Moreover, late reports indicate that Argentine oats have been offered for the St. Petersburg market as well as for seeding purposes. However, it must be mentioned that the prolonged excessive accumulations of grain on the railways and the stipulations of the coasting trade from the southern ports to the Baltic play a no inconsiderable part in the unfortunate circumstances in which the country is involved. Formerly, when large lots of wheat were purchased for St. Petersburg in the southern ports, a substantial profit could be realized by their conveyance in foreign steamers. Now wheat can only be carried in Russian vessels, the tariff of which is considerably higher than that for foreign ships. Therefore, with the accumulation of rather large stocks of grain in the southern ports and then conveyance by rail to the markets of the northern and mid-Volga regions, even south Russian wheat, in conjunction with the general rise of prices, is much dearer than foreign wheat imported via the Baltic ports.

The Central Statistical Committee of Russia has issued its final report on winter grain. The figures on wheat are practically identical with the preliminary figures, and the total is 237,776,000 bushels, against 220,304,000 final last year; rye, 605,613,000 bushels, against 648,874,000 the preliminary estimate, and 720,853,000 last year. Taking the previous figures on spring wheat and the grand total of wheat is 504,836,000 this year, against 636,285,000 last year, decrease 131,449,000; grand total of winter and spring rye 623,615,000, compared with 737,440,000 last year, decrease 113,827,000.

The International Bureau of American Republics is authority for the statement that the commissions appointed respectively by the Coffee Association of Rio de Janeiro and the Commercial Association of Santos to report on the coffee crop of Brazil for the year 1907-08 recently reported that the crop to be exported from Santos would, in their judgment, be 5,500,000 bags and from Rio de Janeiro 3,500,000 bags, making a total of 9,000,000 bags.

The Department of Agriculture places the output of beet sugar in 1906 at 475,000 tons, against 195,000 tons in 1905. It is pointed out that the output of beet sugar last year was about equal to cane-sugar production, the two together making about 950,000 tons, more than a third of the sugar used in the United States. Twelve new factories were established last year, and others are projected for the coming year.

The *Dry Goods Economist* says: "To say that prices have risen to an abnormal degree during the last six months expresses in a very inadequate way the measure of change which has been wrought in the cotton-goods world during that period. Appended is a list of prices on staple lines of cotton fabrics which obtain to-day, as compared with quotations at the end of the year and those in force in June, 1906:

Drills—	*Now*	*Dec., 1906*	*June, 1906*
37-inch, 2.65 yards	7¾c.	7¾c.	7¼c.

The German government has appropriated 50,000 marks to encourage cotton raising in the colonies. The government is making strong efforts to secure the cultivation of the product in sufficient quantities to make Germany independent of America.

The Michigan March report says: "Half wheat damaged; in February a year ago, three-quarters damaged. Farm reserves 5,600,000 bushels, against 6,000,000 a year ago. Crop condition last June 75, and crop 12,000,000."

The National Ginners' Association estimate the number of bales of cotton ginned up to March 2 to be 12,716,000. The full cotton crop of last year was estimated by the Bureau of Statistics on December 11 at 12,546,000 bales.

The new Canadian tariff passed the committee of the House Tuesday. The opposition made a strong appeal for a still higher duty on boots and shoes, large quantities of which are imported from the United States. The government, however, declined to make any change in the 30 per cent. rate decided upon. The old tariff was 25 per cent.

Bartlett, Frazier & Carrington say: "Those who are posted in regard to the damage the appis, or green plant louse, has occasioned in the grain belts of the west in previous years are inclined to belittle the reports coming from the southwest. They have, undoubtedly, almost wiped out the wheat and oats crop of Texas, and are now advancing into Oklahoma and Indian Territory. As to what they can accomplish, we would call attention to their last serious visitation in 1890, when they reduced our wheat and oats crop to the lowest point reached in twenty-three years, the total wheat yield that year being 399,000,000 bushels, and the total oats yield 523,000,000 bushels."

Gross postal receipts at the fifty largest post offices in February last aggregated $6,974,436, as compared with $6,391,559 for the corresponding month of 1906. The post office at New York stood above all others, receipts there footing up to a total of $1,462,012, against $1,329,653, a gain of $132,358.

Broomhall estimates the Australian wheat crop at 80,000,000 to 83,000,000 bushels.

Broomhall reports damage to the wheat crop in India by hail, rain and frost.

The Census Bureau announces that the final report on the quantity of cotton ginned this season will be issued at 2 P. M., March 20.

The Department of Commerce and Labor, Bureau of Statistics, has issued the statement of the exports of domestic products for February. It is as follows:

	1907	1906	*Increase*
Breadstuffs	$14,096,664	$19,460,320	*$5,363,656
Wheat and dairy prod	15,975,436	17,094,539	*1,119,103
Cattle, hogs and sheep	2,926,159	3,605,967	*679,808
Cotton	48,310,102	28,782,905	19,527,197
Mineral oils	6,446,506	5,715,775	730,731
Total	87,754,867	74,659,506	13,095,361

*Decrease.

The exports of cotton for the eight months ended February 28, which aggregated $369,854,730, were $62,745,425 greater than for the same period last year, notwithstanding the average price, 10½ cents, was lower by three-fifths of a cent. The breadstuffs exported in the same time amounted in value to $116,880,154, a comparative loss of $12,857,062; provisions fell off $12,452,917, to $142,292,366, and mineral oils $154,077, to $52,506,768.

The latest official estimate of the Roumanian corn crop is 128,000,000 bushels, giving 80,000,000 bushels for export, which would be the largest on record. This country will be the principal competitor with the United States as the Russian crop is unimportant, and with the Argentine surplus estimated at only 40,000,000 bushels, or less than half of the present year, there will be very little pressure of corn from the Argentine. Some estimates, however, of the Russian crop by private authorities have made an export surplus of 32,000,000 bushels from Russia, which would go a long way toward making up for the deficit in the Argentine.

Financial.

The members of the New York Cotton Exchange have voted to close the Exchange on Good Friday and the following Saturday.

On Tuesday the Bank of Holland advanced its official discount rate from 5 to 6 per cent. On October 11 last the rate was raised from 4½ to 5 per cent.; on May 4 from 3 to 4½ per cent. At this date in the past few years the Dutch bank rate has been:

1907	6	1903	3
1906	3	1902	3
1905	3	1901	3
1904	3½	1900	3½

The governor of Missouri has signed a bill taxing each transaction of $1,000 in future grain, cotton or stocks 25 cents.

At the annual meeting of the Pennsylvania Railroad Company, Tuesday, the stockholders approved the $100,000,000 new stock and $100,000,000 additional bond issues as recommended by the directorate.

The United States Realty & Improvement Company has declared an initial quarterly dividend of 1½ per cent. on its capital stock, payable May 1.

The special reports of the life-insurance companies published in the *Wall Street Journal* since the first of the year have indicated that the gain in the amount of outstanding life insurance for 1906 was considerably less than the gain for 1905. The aggregate amount gained by the three big companies and twenty-eight other companies in their total outstanding insurance during each of the last three years is as follows:

	1906	1905	1904
Big three companies	*$192,727,523	$144,502,930	$371,403,538
Twenty-eight other companies	231,023,879	260,407,019	246,016,493
Total 31 companies	38,296,356	404,909,949	617,420,031

*Insurance lost.

From the above it is seen that the Equitable, Mutual and New York Life taken together had $192,727,523 less insurance in force on December 31 last than they had on December 31, 1905. Against such a heavy loss for 1906 was a gain of $144,502,930 for 1905 and of $371,403,538 for 1904. The gain of the other twenty-eight companies for 1906 was $29,383,140, or 11.28 per cent., less than was the gain for 1905, while the gain for 1905 was $14,390,526, or 5.85 per cent., more than for 1904.

The members of the New York Coffee Exchange have voted to close the Exchange on Good Friday and the Saturday following.

Directors of the Toledo, St. Louis & Western have declared an initial semi-annual dividend of 2 per cent. on the preferred stock.

A New York Cotton Exchange membership was sold at $12,500 Wednesday. The previous sale was made for $11,500.

Ministerial decrees were published in the French *Official Journal* Thurday declaring that the New York Life Insurance Company, the Mutual Reserve Life Insurance Company, and Equitable Life Assurance Society are registered under the law to carry on business in France.

Railroads.

Stuyvesant Fish, formerly president of the Illinois Central Railroad Company, has been elected to the directorate of the Missouri Pacific system.

The *Railway Age* remarks that the statement in a resolution adopted by the National Board of Trade, that "the expansion of interstate traffic in recent years has been relatively greater than the increase in railroad equipment," probably echoes a belief held by most of the American people, yet it is very far from being correct. Statistics published by the Interstate Commerce Commission prove the contrary. Thus from 1902 to 1905 the aggregate ton mileage of all American railways increased from 157,289,370,053 to 186,463,109,510, or 18.55 per cent. During the same period the total capacity of freight cars owned and leased by the railways increased from 42,292,977 to 53,255,083 tons, or 25.92 per cent., and the total tractive power of locomotives from 768,502,779 to 1,128,771,082 pounds, or 46 88 per cent.

The Wabash Railroad has sold the Lake Erie, Youngstown & Southern Railway to the Pittsburgh & Lake Erie. The Lake Erie, Youngstown & Southern is a projected line, work on which was never undertaken. Its assets consist almost entirely of terminal properties in Youngstown, Ohio, and certain trackage rights and charter.

On Monday the Kansas House passed the Senate two-cent fare bill. It provides for 500, 1,000 and 2,000 mile books, the 2,000-mile books to be interchangeable.

Like the other anthracite transporting railways, the Delaware & Hudson Company shows in its annual report for 1906, which has just appeared, a falling off in respect to coal traffic as compared with the record of the preceding twelve months. Nevertheless, while the property exhibits a decrease of $1,642,955 in the amount of earnings derived from its coal business, increases in revenues from general freight and miscellaneous sources make the total reduction in gross only $662,394. As the operating expenses were cut down to the extent of $415,084, the net earnings were only $247,000 smaller than the year before, while the surplus for the year, which is given as $5,156,137, represented an increase of $476,542, the total of this item being equivalent to about 12¼ per cent. upon the company's share capital, compared with about 11⅛ per cent. in the preceding year.

Industrial.

Twenty new cotton mills have begun operations in the Lancashire (England) district this year.

The monthly pig-iron statistics collected by the *Iron Age* show that the output for February, a short month, of coke and anthracite pig iron amounted to 2,045,068 tons, as compared with 2,205,607 gross tons in January. This is an increase in the daily rate of production from 71,148 tons in January to 73,028 tons in February, an increase of 1,880 tons daily. Of this, however, 1,700 tons daily is due to the larger output of the steel works furnaces, which made 1,317,923 tons in February, as compared with 1,406,397 tons in January. This shows that the output of the merchant furnaces, who supply the open market, has not yet been materially increased. On March 1 the weekly blast-furnace capacity of active furnaces was 511,035 tons, as against 492,359 tons on February 1, and 513,860 tons on December 1, 1906, the record.

The Carnegie Steel Company of the United States Steel Corporation, with not three months of the year over, has already booked in contracts more domestic tonnage in steel rails for delivery in this year than it did during the whole of 1906. The total tonnage taken for last year was 454,851 tons, and already in this year 458,497 tons have been closed in contracts.

Anthracite operators have agreed to make the usual 50 cent reduction in the price of prepared coal on April 1.

Miscellaneous.

The estimated financial loss, including damage to property, loss of wages and reduction of output, as the result of the Pittsburgh flood, is put at nearly $10,000,000. More than 175,000 persons in Allegheny county have been temporarily thrown out of work.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Spring business has further expanded, jobbing operations being maintained at a volume equal to or exceeding last year, while retail trade has felt the stimulus of the approach of Easter and the appearance of spring-like weather. Increased complaints as to short stocks in some lines, notably dry goods, come from many points, and slow deliveries are still complained of. Industry is active, except where, as in the flooded sections of the Ohio valley, mill operations are restricted. Severe declines in the stock market, high rates for money, slightly more unrest in labor lines, and heavy rains and floods in the Ohio valley, are the principal unfavorable features. While business is large, there is said to be no tendency to purchase beyond legitimate requirements, and the prospects favor active demand and a large turnover. In fact, while the recession in stock market prices has caused some concern outside of speculative centers, it is noteworthy that the great producing and consuming regions view the slump with a certain degree of calmness, and seem to be more concerned about the outturn of crops the coming season. Although money is higher, some sections of the country report improvement in collections, though it must be admitted that payments are still backward. Shipments of currency to the interior are increasing and banks are closely loaned up. Country banks, however, are liberal purchasers of commercial paper, and funds in the crop-producing regions are said to be ample. There is also apparent basis for the idea that liquidation in inflated stocks will allow a more liberal supply of money to be diverted to regular trade channels. While the green bug has ruined wheat and oats in Texas, the situation in Kansas and the southwest generally is excellent, and the impression seems to be that damage reports have been considerably exaggerated for market effect. In the south preparations are progressing under favorable soil conditions for a large cotton acreage. The undertone in the pig-iron market is more cheerful, and the entire situation as regards all forms of manufactures may be epitomized by the words great activity and enormous pressure for deliveries.

In the pig-iron market buyers and sellers seem to be maneuvering for position as regards prices, and while little new business has been placed, except in the Birmingham district, the undertone appears to be stronger. Some foreign foundry iron is being offered at prices that are much below those quoted for the domestic product. Production in February was below that of January, but the daily output during the first-named month increased somewhat over January's, the largest part being furnished by the leading interest and not by the merchant furnaces, whose product has the most influence on the open market. Bessemer pig is still scarce in the central west, but in the east deliveries have improved. Demand for deliveries of steel rails is urgent. New business is not heavy, the largest order placed within the week being for 21,500 tons, but considerable demand is expected from Japan and South America later on. All finished lines are very active, with specifications coming in freely. Pipes and tubes are in brisk request, and the leading interest has withdrawn prices and notified the trade that no orders will be taken for shipment this side of June 1. Sheet and tinplate mills were never so rushed, and fancy premiums prevail. It is said that the demand for cotton ties will assume enormous proportions. Scrap material is strong in spots but quiet in others. Coke has declined, owing to the blowing out of furnaces for repairs. Anthracite coal is firm on a good demand. Bituminous coal is weaker in the west because of better shipments. Copper is higher, some sales of high-grade lake being reported at 26 cents.

This is about the first week for real crop reports, and the tenor of advices to BRADSTREET'S is encouraging, excepting only from Texas, as to wheat and oats. In that state the green bugs mentioned some months ago have killed much of the crop, and land is being plowed for cotton and corn. In Kansas an increase in acreage and excellent conditions for wheat are indicated. In fact, outside of Texas, reports are that conditions were never better. East of the Mississippi conditions are not clearly defined, but reports received are not discouraging. Preparations for a record acreage in cotton are going on under favorable circumstances at the south. The ground is well broken and moistened by rains; fertilizer sales are large, and, except in parts of the Memphis district, where money conditions affect factors' advances, a heavy planting seems certain.

In the wool market firmness prevails and interest centers in foreign grades, arrivals of which are very heavy. Stocks of domestic wool are very small, though sales thereof are of moderate proportions, and many grades are entirely cleaned up. The mills are still running on worsteds, and, therefore, staple wools are in good demand. Offerings of clothing wools are quite liberal, but they go slowly, because the promised improvement in the goods market has not as yet set in. Arizona newly shorn wools are fairly active, but general opinion points to less contracting in the west this season than for several years, owing largely to high money, moderate interest in domestic wools, and the tendency of the mills to carry only what wool is actually needed. The London sales opened firm—firmer than expected on low crossbreds. Americans are purchasing freely.

Prices of staple commodities struck a new high level on March 1, when BRADSTREET'S approximate index number reached $9.0293, a gain of four-tenths of 1 per cent. over February 1, of 9.7 per cent. over March 1 last year, of 9.8 per cent. over the level on February 1, 1900, and of 58 per cent. over the level reached on July 1, 1896. Textiles (notably cotton goods), breadstuffs and provisions showed most strength.

Railway gross earnings continue heavy, those for the first part of March being somewhat in excess of the like period in 1906. Returns for February show a moderate accretion—2 per cent.—over that month last year, but the increase reported on the latter occasion was 25.6 per cent., when, moreover, weather conditions were almost ideal.

Stock values at New York had a substantial rally on Friday from the almost unprecedented demoralization of values in the semi-panicky markets of last Wednesday and Thursday. This was in large part due to the fact that the Treasury Department had taken steps to alleviate the strain in the loan market, while covering by the extensive short interest has also been a factor. The bond market lacks strength, and though prices in that department have not suffered to the same extent as in the stock list, the sales have been larger, particularly of convertibles. Foreign exchange is weak at below 4.84 for demand sterling, but gold imports are not considered likely, in view of London's unwillingness to part with specie.

While responding to different influences early in the week, all speculatively-dealt-in commodities felt the weakening effect of the slump in stocks later on, and the movement of prices through the week, therefore, has been an irregular one. Wheat was strong early on crop-damage ("green bug") stories. All markets gained 1@1½ cents, but quotations eased later, touching the lowest point on Thursday, when slightly more than the entire early gain was lost. Better export demand was a steadying feature at the decline. Corn and oats moved similarly, though within a narrower range. Sugar strengthened early but weakened later, and the net decline is slight. Coffee weakened ⅛ cent on spots and 5 to 15 points on futures.

Cotton weakened early on large receipts and in sympathy with the disturbed condition of financial markets, losing 30 to 40 points up to Thursday in futures and 25 points in spots.

Bank clearings for the week ending March 14 aggregate $3,252,220,000, 5.7 per cent. under last week, but 18 per cent. over the same week last year. Outside of New York exchange amounts to $1,148,376,000, 7.8 per cent. below last week, but 15.3 per cent. over the corresponding week last year.

Business failures for the week ending March 14 number 186, against 172 last week, 187 in the like week of 1906, 186 in 1905, 193 in 1904 and 194 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending March 14 aggregated 2,080,034 bushels, against 2,251,303 bushels last week, 2,010,237 bushels this week last year, 895,742 bushels in 1905 and 2,966,250 bushels in 1902. For the past thirty-seven weeks of the fiscal year the exports are 126,004,865 bushels, against 99,152,892 bushels in 1905-06, 45,599,114 bushels in 1904-05 and 188,431,838 bushels in 1901-02. Corn exports for the week are 1,998,254 bushels, against 2,631,572 bushels last week, 2,235,282 bushels a year ago and 3,841,411 bushels in 1905. For the fiscal year to date the exports are 47,313,437 bushels, against 89,052,445 bushels in 1905-06 and 51,971,348 bushels in 1904-05.

IN CANADA.

Canadian trade is satisfactory, while collections drag, though they are better than of late in some lines. Country retail trade has been good, but spring will bring bad roads and possibly some quieting. City retail trade is active at all eastern cities and is picking up at the west. A very active year in railroad building is looked for in the newer sections, and only a very heavy immigration will meet the large demand now indicated for labor. Dry goods lead in activity at all centers, with millinery, hardware and metals in active demand. Failures for the week number 23, as against 21 last week and 33 in this week a year ago. Clearings for the week aggregate $77,904,000, a decrease of 2.2 per cent. from last week, but a gain of 18.7 per cent. over this week a year ago.

TRADE REPORTS.

At New York demand for cotton goods continues very active. Some houses are short of stock, and there are instances in which certain makes of goods are sold out and cannot be replaced this season. Business in silks is steadily advancing at well maintained prices. Raw silk is in better request, but owing to high prices manufacturers of silk fabrics are purchasing conservatively. Business in dress goods is of large volume, and trade in worsteds for men's wear is satisfactory. Collections are good. Millinery is in a fairly prosperous condition. Hosiery, gloves and knit goods are very active. Commission merchants are sold up to full capacity for a year to come, and dealers say they could sell more goods than they would be able to deliver. Manufacturers of shirts and waists are also doing a very brisk business. Trade in wholesale notions is large. Demand for woolen rags has slightly improved, and the outlook is more favorable. Wholesale grocers report sales in excess of those for the corresponding week of 1906, and collections are good. Retail trade is also good. Butter dropped 2 cents on large receipts, and eggs also declined. Cheese is steady. The confectionery business is in full swing and collections are fair. In the wine and whiskey trades business for the past two weeks has been very good, demand for staple goods being steady. The California and western wine trades are also active, and collections all round are very fair. Buyers of flour are now willing to take full supplies at firm prices, and the market is very strong. In live stock the supply of prime steers is not equal to the demand, and first grades of dressed meats are in active request at firm prices. The woolen market is quiet. The demand, however, especially for the finer grades, is fully up to the average. Cordage and twine are in good request, and prices, which are firm, admit of a good margin of profit. In the tin and enameled ware, hardware, cutlery, china, glass and woodenware trades collections are slower than usual, but the volume of business and orders for future delivery continue good. Metals, especially copper, are in active demand and prices are well maintained. Pig iron is less active, and some classes of old material have a downward tendency. Business in agricultural machinery is very brisk, but prices are unsettled. Leather dealers report no difficulty in disposing of stocks. Shoe jobbers and retailers report business satisfactory. Furniture is quiet and manufacturers report poor collections. Manufacturers of and jobbers in jewelry are busy, but retail trade is not buoyant. Wholesale tobacco is more or less inactive, buyers being held off by the high prices and purchasing only what they actually require. Collections are slow. Local stocks of paper are low; the demand continues good and prices are very firm. There is some delay in getting delivery from manufacturers. Real estate tends toward lower prices for private-house property. Car shortage and weather conditions combined have curtailed business in lumber and building materials, but orders for future delivery are numerous and prices very strong. Collections are fair, but there is considerable renewal of paper.

The following telegrams show trade conditions at the cities mentioned for the week ending March 15:

BOSTON.—Activity continues in dry goods, and the tendency of prices, especially in cotton cloths, is still upward. On plain bleached sheetings, in many lines further advances are announced. Ginghams are scarce in the market and backward in deliveries, and mills are sold up for months to come. In the print market announcement of advances is made. Extreme high prices on all lines of cotton fabrics affect various lines of industry and are causing increasing concern. For summer fabrics, in fine muslins and silks, both plain and figured, a heavy demand is developing. Dress goods generally are active and strong. The paper market is holding its own as to prices, and there is a fair amount of new business in both mill and jobbing circles. Old papers continue to be the important feature in paper stock, that branch of the market exhibiting the greatest strength. New business in foreign rags continues on a moderate scale, and the movement is chiefly in old stock. Business is of satisfactory volume in house-furnishing lines. Prices are firm, and some difficulty is experienced in getting early shipments. Trade conditions are generally healthful and collections are fair. In coal more orders are being given for anthracite, stocks being rather light and retail trade very busy. In bituminous the supply is light, with brisk demand in prospect. Lumber trade in all lines is comparatively quiet, waiting for warmer weather to stimulate building operations. Copper market is strong as usual. Building materials of all kinds are in demand, as well as paints and oils. Wholesale liquor dealers report satisfactory trade during the past week; collections are rather slow. Leaf-tobacco dealers report purchases made for immediate wants. The market is easier, and dealers expect a further drop in prices. The demand for both fresh and salt fish continues active, with prices well sustained. Reductions are noted in butter and eggs.

PROVIDENCE.—Jobbers in fancy goods and notions report a good demand, and the general trade in furnishings is in a satisfactory condition. Worsted goods continue active. Throughout the jewelry trade manufacturers are busy, and supply dealers also report a good trade. Collections are fair.

PORTLAND, ME.—Trade is only fair. Millinery and rubber goods are active, but in other lines things are a little quiet. Collections, on the whole, are about fair.

PHILADELPHIA.—Flour is unchanged and dull, there being no material change in prices. Chemicals and dyestuffs are more active, especially in heavy grades, and prices are hardening. Paints and glass are beginning to move in larger volume, and there is every prospect of a heavy spring delivery; prices are firm. Lumbermen say that business keeps up remarkably well considering weather conditions, and the market rules firm to

advancing. Leather market is firm, demand quiet, supply fair, and advanced prices prevailing. Wholesale and retail shoe dealers report slight improvement in volume of business. Leading manufacturers of cigars have supplies even for the large new business offered; the smaller ones have little trade at present. There are some holding off for lower prices that are hoped for, also to see the new Sumatra and to learn prices, which are practically established for the season's crop at that sale; collections are slow. Liquor distillers are busy, but wholesalers are quiet. Wool shows little change, stocks are low and prices firm. Demand for cotton yarns continues, but there seems to be a disposition on the part of sellers to scrutinize credits a little more closely. Dry-goods jobbers speak of collections as slow, but business is fair. The depressed condition of the stock market has had no visible effect upon iron, and mills and furnaces are supplied with orders sufficient to occupy them for months to come. Coal trade is fair.

PITTSBURGH.—In the pig-iron market no sales were reported during the week, there being no basic iron to be had for spot delivery in this district and but a very limited quantity of Bessemer, and buyers for second-half delivery are still holding back, expecting a weakening in present quotations, which, if anything, are stronger. In finished lines the situation is all that could be desired, as there is a continued good demand, and specifications on old contracts are coming in freely. Owing to good transportation facilities coke is still in plentiful supply and prices are somewhat lower, though present flood conditions may delay shipments and cause a stiffening in prices. Quotations for pig iron at the valley furnaces for spot delivery are as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $3 and foundry coke at $3.80, at the ovens.

BUFFALO.—Owing to fair weather retail dealers and jobbers report increased trade and look forward to a good Easter business. Collections are fair.

BALTIMORE.—House trade is very brisk, owing to the presence of a large number of out-of-town buyers. Most of the merchants are from the south, but there are a number from Pennsylvania and a few from New York state. Very satisfactory orders so far. Jobbing business is ahead of that of last year. Jobbers in dry goods and notions report continued advances in certain staple lines, the result being rather conservative buying. Certain staples are scarce, mills being sold, in some instances, up to November and December next. Demand for boots and shoes at wholesale is active. Late spring orders, of fair volume, are being received by manufacturers of clothing. The season now closing shows up well, with business fully up to 1906. In millinery at wholesale the early approach of Easter has made trade very brisk. Wet weather has caused a temporary curtailment of new business in fertilizers, but manufacturers are busy on old orders, with prices steady. Receipts of leaf tobacco are light, Maryland leaf, which is now entering into the manufacture of cigars, being very scarce. Prices are firm, with good leaf in active demand. Manufacturers of shirts, overalls, straw hats, suits and skirts are well employed and unable to keep pace with orders through lack of labor. Opening of bay navigation has stimulated the wholesale grocery business to activity. Poultry is firm, with light arrivals. Turpentine and oils are very firm and tend higher. Spring business at retail is opening up well, but local collections are slow. Southern collections are fair to slow, and western collections are reported good. Builders' materials are active, but the inclement weather of the past sixty days has materially retarded building operations, yet business compares favorably with March, 1906. Real estate is active.

CINCINNATI.—Trade in millinery and women's garments shows considerable improvement. In dry goods, boots and shoes and clothing business is good and advancing. The whiskey trade throughout the south has been active for two months, although in some portions business has been affected by floods. An increased demand for enameled goods is noticeable despite an advance in prices. Collections continue good.

CHICAGO.—Business throughout the west is large and there is no expansion beyond legitimate limits. It is, however, useless to deny that the demoralization in Wall street and the decline in securities has not caused a feeling of apprehension among bankers and business interests. Trade is good, with sales ahead of last year. Consumption is heavy, and there has been little, if any, cancellation of orders. Railroads, however, are in some instances cutting down their contemplated improvements, others will carry them out, having completed their financing plans. They figure that the work will have to be done sooner or later and they might as well do it now and get the benefit of it. Firmness prevails in iron and steel, with a fair amount of new business in structural steel, wire and wire nails, sales of the latter being unusually heavy. Pig iron is selling fairly for immediate delivery at full prices. A few furnace men also report increased sales for delivery in second quarter. Others say they are sold ahead for the balance of the year, as their furnaces have not produced as expected. Coal mines in most of the Illinois districts are getting more cars and the market shows weakness. Lumber is having an increased sale, and on dry stock it is more of a question of getting it than of securing orders at full price. Dry goods and clothing sell more rapidly and in excess of last year. Groceries have a heavy sale. Butter, eggs and potatoes are lower. All live stock is higher, with increased receipts of cattle and hogs and decrease in sheep. Spring work is delayed by unfavorable weather. Money is firm. Banks are closely loaned up. Shipments of currency to the interior are increasing. Country banks are good buyers of commercial paper.

LOUISVILLE.—Trade throughout the greater part of the week has been adversely affected by the strike of street car employees, 1,000 in number, which tied up traffic. On Friday, however, the employees resumed work on the operating company conceding higher wages, one result being enlivened trade. Collections are slow.

ST. LOUIS.—The heavy spring purchases are about over. Reports from large manufacturers and jobbers indicate that the season has been one of the best in many years. Nearly every concern shows an increase in sales, and at the same time report that collections for the season are even better than last year. Money rates tend upward, but there seems to be ample funds in country banks to take care of customers, while the larger city banks are discriminating in favor of the legitimate merchant, which, of course, makes the business situation more comfortable. There is some talk of damage to the winter-wheat crop in the lowlands on account of continued rains throughout the winter months, and in the extreme southwest there is reported injury to the crop on account of green bugs, but it is generally conceded that these conditions are exaggerated. Merchants and manufacturers, generally, deplore the conditions existing in the stock and eastern money markets, but express the belief that this will not materially affect the west, and that the only thing that will touch the west unfavorably will be a crop failure.

KANSAS CITY.—Wholesale business in leading lines continues to show a steady improvement over the like time in 1906. Dry-goods sales show the greatest gains. Trade in implements, vehicles and harness is heavy. All manufacturing lines are active. Retail trade is good and collections show marked improvement. The condition of winter wheat in Kansas was never better at this season of the year. The acreage shows a slight increase over last year.

WICHITA.—Growing wheat was never in better condition. The acreage is large. Copious rains render prospects equal to those of last year.

MILWAUKEE.—Jobbers report trade very satisfactory. Retail business is a little slow. Collections are fair.

SIOUX CITY.—Wholesale business continues good. Retail trade is increasing with warmer weather. Collections are fair.

DAVENPORT.—Retail trade in most lines is good, though some complaint is registered by clothing and shoe dealers. Jobbing business is classed as fair for the season. Manufacturers are busy. Collections tend to slowness, and demand for money is good.

ST. PAUL.—Sales continue to advance in all lines over those of last year. Certain forms of dry goods are unobtainable. Collections are still backward, though some improvement has occurred to date. Payments are not quite up to those of last year. Conditions generally in parts of North Dakota are giving rise to some anxiety.

MINNEAPOLIS.—With the coming of spring-like weather there is an improvement in retail trade, and jobbers note betterment in reorder business. Trade, on the whole, is of larger volume than a year ago, and collections show improvement.

LINCOLN.—Spring trade outlook is good and collections continue fair.

OMAHA.—Jobbers of dry goods, groceries, shoes and millinery report a substantial increase in sales. Retail trade is showing more activity. Collections are only fair.

CHARLESTON.—Merchants have bought very few spring goods, with the exception of groceries. Farmers are actively engaged in preparing the soil preparatory to the planting of cotton. Collections are slow.

RICHMOND.—As a jobbing center for spirits and liquors this market is growing in importance. Wholesale dealers in, rectifiers, distillers and jobbers of spirits and liquors have had a successful year; they have entered new fields with encouraging results and their sales have shown a steady increase. Tobacco continues to be marketed in moderate amounts, and prices of all grades continue good. Dry-goods dealers continue spring shipments. Retail trade is at the end-season dullness. Collections generally are backward.

AUGUSTA.—Trade continues to improve. Collections are fair.

ATLANTA.—Collections are improving. Trade in all lines is active. Weather conditions for crop preparations have been favorable.

BIRMINGHAM.—Southern foundry No. 2 pig iron for immediate delivery is scarce at $23.50. Demand for future delivery is strong. Trade in general is good, with average collections.

JACKSONVILLE.—Collections are fair, with retail trade good and liberal orders from interior. The outlook is favorable, though the protracted drought may have some influence.

MOBILE.—Owing to the waters receding earlier than usual cotton planters in the lowlands of the river district are enabled to make preparations, and progress is also being made in the hill lands. Wholesalers report large orders booked for future shipment, with collections satisfactory. In retail trade demand for light materials is active owing to the early spring. Lumber and naval-store products are firm, but the supply of the latter is limited, owing to the September storm.

MONTGOMERY.—Retail merchants in millinery lines are having their spring openings and report sales on an average with last season. Wholesalers report business quiet. Planters are busily engaged preparing for coming crops. Prospects are for a large acreage of cotton and corn.

CHATTANOOGA.—Wholesale and retail trade is active and prospects for spring trade are encouraging. Collections range from fair to good.

MEMPHIS.—Retail trade is quiet, but wholesale is improving. Collections are slow. The car shortage is delaying the movement of cotton and lumber. Weather conditions are delaying plowing and planting. Cotton factors have not generally commenced to advance on next season's crop, and a reduced acreage is predicted.

NASHVILLE.—Wholesalers of dry goods and groceries report a steady increase in sales. Collections are fair. Retail trade is fair.

LITTLE ROCK.—Jobbers in groceries, dry-goods and hardware report business about equal to a year ago. Retailers are doing a good business, owing to favorable weather conditions. The cotton-crop outlook is very satisfactory, farming operations being well under way, with the ground in good condition. The acreage will be increased, and labor is now plentiful.

NEW ORLEANS.—Retail trade is fair and the outlook for spring business is rather good. Jobbers are doing a fair volume of business. Crop conditions are favorable. The cotton section is making preparations for a large crop, and the ground is practically ready for planting. Sugar cane is more than a month ahead of last season, and considerable rice has already been planted. Money is firm.

FORT WORTH.—The wheat and oats crops in northern central Texas have been completely destroyed by bugs. These lands will be replanted in cotton and corn, which is under way. Recent heavy rains have put moisture in the ground for spring work. Trade is active and collections are about the average.

DALLAS.—Trade in all jobbing lines is excellent, but there is still some complaint on account of slow collections. Retailers are showing their spring goods and enjoying a good trade.

WACO.—Traders report a satisfactory business. Collections are fair. Recent rains will prove very beneficial to all crops, especially oats, and are a great help to cotton lands, which are about all broken for planting.

SAN FRANCISCO.—Retailers are clearing stocks, and wholesalers report chiefly sorting orders. Continued rain has delayed grain planting, and crops will be smaller than usual. Collections are slow, and money is rising.

SEATTLE.—Trade generally is showing increased activity. Jobbers report considerable business from Alaska, the merchandise being shipped over the ice. Collections are fair.

SPOKANE.—Winter wheat is looking well. Freight is arriving in large quantities. Considerable wheat is being moved to tidewater. Collections are still slow.

TACOMA.—Lumber and shingles are quiet. The Northern Pacific Railway advises that the embargo will be raised on these products in a week. This will open mills that have of necessity been closed.

PORTLAND, ORE.—Labor difficulties have tied up all the lumber mills of the city and threaten to retard building operations. Other lines are active, and collections are improving.

TORONTO.—Orders still come forward for spring and summer dry goods, although many domestic manufacturers have sold to the limit; values hold very firm. The millinery trade promises to be exceedingly heavy, and demand for ribbons and trimmings is very brisk. Dry-goods men say collections are still a little slow from some quarters, but the situation is not without improvement. Orders from the west are heavy. There is a good movement in hardware. A slightly easier tone is noted for pig iron. Groceries are brisk. There is a shortage in canned vegetables and a continued good demand for teas. Country trade has shown some improvement, but bad roads are likely to have a quieting effect. Milder weather will be followed by lower values for dairy products and eggs.

MONTREAL.—Trade continues quite satisfactory. For some weeks past there has been a noticeable slowness to collections, and there have been frequent complaints among wholesalers about the way bills are met. More recently some improvement has been noted. Country retail trade has taken on a livelier tone, and no doubt this activity will continue until roads get into bad shape. Retail trade in this and other cities of eastern Canada is generally good. Dry goods are brisk; present orders are large and cover a wide assortment of lines. Prospects for sorting trade in spring and summer lines are good; values hold firm. Hardware dealers are preparing big shipments for the opening of navigation, which, it is hoped, will take place soon. Orders in all lines are exceedingly brisk. There is a big trade reported for fine-grade mechanics' tools. Further tariff revision reduces the British preference of iron and steel scrap from 70 to 50 per cent., and boiler plate of iron or steel, to be used exclusively in the manufacture of boilers, has been placed on the free list.

VICTORIA-VANCOUVER.—Wholesale trade has a good tone all along the Pacific coast. Retail trade is also brisk and collections are good. Hardware is particularly firm. Provincial industries continue busy.

WINNIPEG.—Elections have had some effect on business in Manitoba, but in other parts a fairly large business has begun to move. Dry-goods men are particularly active in preparing for the trade of the coming season. Collections are showing some slight improvement, but there will be nothing very marked in this regard until the grain at present in farmers' hands is marketed. It is expected, however, there will this year be a very large influx of settlers with plenty of ready money, which will do much to help general trade. Owing to railway extensions throughout the west and to the general growth of the country, the demand for labor this year will be exceedingly heavy. A large immigration will be the only way of meeting that demand.

FINANCIAL.

Money Market.

Call and time loan rates both advanced sharply in the New York market this week, the former touching 25 per cent. on Thursday, while 6½ per cent. was demanded for time arrangements, and the minimum for that class of loans throughout the week was 6 per cent., and in Friday's dealings as high as 8 per cent. was asked for thirty days. This action of money rates was was to a certain extent influenced by the demoralization of the stock market, but the principal cause was the continued call for funds at the interior, the estimated loss to the banks from Treasury collections and shipment of funds to other points being about $3,000,000 for the week. Not a little anxiety prevailed as to what policy the Secretary of the Treasury would adopt in regard to helping the money market, but this was not set at rest until Thursday evening, when announcement was made that $25,000,000 of the 4 per cents

due July 1 would be prepaid, and that the collectors of customs had received permission to deposit collections with national bank depositaries, although this, it seems, does not apply to New York. The effect of this announcement on the money market was reassuring. The further weakening of foreign exchange, bringing it below the gold import point, was the object of a great deal of comment, in view of the fact that bankers here seemed adverse to disturbing the London situation by taking gold from that center. Commercial paper has been very dull, the limited buying demand and the high rates tending to keep offerings off the market.

New York Banks.

Stock-market liquidation was undoubtedly the reason for the decrease of over $12,000,000 in the item of loans which was displayed in the Clearing House averages of last Saturday. There was, however, another somewhat incongruous element in the figures in the form of a decrease of some $6,400,000 in the aggregate specie and legal tenders, these figures being about three times as large as the actual loss of cash indicated by the preliminary estimate It would seem, however, that this was due to the system of averages and simply reflected the heavier actual loss in cash in the preceding week than was shown by the statement of March 2. The decrease in deposits of some $18,500,000 was, however, in close agreement with the other items and reduced the reserve requirements by $4,635,000, so that the falling off in the surplus reserve was only $1,806,925, making the statement, on the whole, a rather good one. The figures compare as follows with those of the preceding week:

	March 9	March 2	Changes
Loans	$1,066,956,900	$1,079,185,600	D $12,228,700
Specie	185,456,700	189,065,200	D. 3,698,500
Legal tenders	71,567,300	74,401,400	D. 2,834,100
Deposits	*1,019,889,100	1,038,431,800	D. 18,542,700
Circulation	52,281,300	52,787,200	D. 505,900
Total reserve	257,024,000	263,466,600	D. 6,442,600
Reserve required	254,972,275	259,607,950	D. 4,635,675
Surplus reserve	2,051,725	3,858,650	D. 1,806,925

The following table shows the bank holdings on the respective dates:

	Mar. 9, 1907	Mar. 10, 1906	Mar. 11, 1905
Loans	$1,066,956,900	$1,019,579,500	$1,132,920,300
Specie	185,456,700	178,668,000	221,189,700

Deficit	2,559,025	1,693,125	Inc. 865,900

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending March 14 shows an aggregate of $3,252,220,000, as against $3,451,742,000 last week and $2,759,321,000 in the corresponding week last year. Canadian clearings for the week aggregate $77,904,000, as against $79,661,000 last week and $65,582,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	March 14	Inc.	Dec.	March 7
New York	$2,103,844,000	19.2	....	$2,203,792,000

Foreign Exchange.

Under the influence of high rates for money, the foreign exchange market, which had been steady in the early days of the present week, declined materially, although cable transfers showed firmness in the face of the drop in demand bills and long sterling. The supply of both commercial and finance bills was not specially large, though with the advance of money rates at New York some offerings of the latter came out toward the end of the week. Posted rates were reduced ½ cent to 4 80½ @4.85, while actual demand sterling fell to below 4.84 and long sterling to 4.79.25. It was fully noted that such quotations would appear to make gold imports possible, but the concensus of opinion in banking circles was that the opposition in the London market to allowing specie to be taken for New York was unchanged. The fact that the price of gold at London was marked up on Wednesday was also considered significant. On Friday the market developed further weakness, demand sterling breaking to the lowest figures which have been seen for some time.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 9	Mar. 11	Mar. 12	Mar. 13	Mar. 14	Mar. 15
4.81½ @ 4.85½	4.81½ @ 4.85½	4.81 @ 4.85½	4.81 @ 4.85½	4.80½ @ 4.85	4.8.½ @ 4.85

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.84.40 @ 4.84.50	4.84.30 @ 4.84.40	4.84.20 @ 4.84.30	4.84.10 @ 4.84.25	4.83.90 @ 4.84.05	4.83.25 @ 4.83.50

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.80.10 @ 4.80.15	4.80.00 @ 4.80.05	4.79.90 @ 4.80.00	4.79.50 @ 4.79.75	4.79.25 @ 4.79.75	4.78.60 @ 4.79.00

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.84.05 @ 4 85.20; commercial bills, 4.77¾ @4.78½; francs, 5 26¼ @5.25⅛ less 1-16; reichsmarks, 93 7-16 @94¼.

The Bank of England discount rate remains unchanged at 5 per cent. In the week ending Thursday the institution showed a decrease of £104,000 in gold, but the proportion of its reserve to liability rose from 44.82 per cent. last week to 46.39 per cent. There was also a decrease of £1,652,000 in the borrowings by the market from the bank. In the London open market call money is firm at 4@4½ per cent., and discount is 5@5¼ per cent. The Bank of France reported for the week a decrease of 12,825,000 francs in gold. Its rate remains at 3 per cent., the Paris market rate for discount being 2⅛ per cent. At Berlin the bank rate is still 6 per cent. and the market quotation 5½ per cent.

New York Securities Market.

While last week's stock market ended with a great deal of nervousness, the trading on Saturday resulting in continued weakness and declines of several points in many of the active stocks, especially in the Hill group, in United States Steel and in Union Pacific, it was felt that the extent of the drop and the enlarged nature of the short interest in the market rendered an improvement more than probable. The developments of the first days of the present week, in fact, tended to bear out such ideas. The market on Monday had a considerable rally, due in the main to covering, it being intimated that some very large bear operators had taken profits. It was also thought that the interview between Mr. Morgan and the President in relation to the attitude of railroad officials toward the government and present and prospective regulative legislation might be productive of good. Still, the market seemed unable to develop real strength. There was also a continued absence of aggressive speculative buying, although very large amounts of stocks were, according to all accounts, purchased by investors throughout the country, particularly by holders of moderate amounts of capital. By Tuesday, however, these favorable influences seemed to lose their force, and further liquidation of the heaviest character set in. Money also became decidedly strong, running up to 12 per cent. on Wednesday, and the market furthermore tended to reflect adverse conditions prevailing in the London and Berlin markets, which exhibited high money rates and extreme weakness in government securities and a fall in consols to the lowest figures in many years. On Wednesday the weakness of the stock list assumed an acute form. Almost throughout the entire day there was a continual outpouring of great masses of the leading stocks, while new low record prices were made in many instances. In this movement the so-called Harriman group, Union Pacific and its companions, had a conspicuous place, but the losses in values were almost too general for special characterization. The bears also renewed their activity, and though a feeble rally on covering occurred before the close of Wednesday's market, it did little toward making amends for the previous heavy shrinkage in prices. The absence of any very definite rumors of trouble and the fact that the market did not at any time become really panicky was commented on a good deal, and it was also noted that the renewed breaks brought in a certain amount of buying by bargain hunters. This, however, was insufficient to overcome the large blocks of stocks which came upon the market, evidently representing liquidation by very important interests which had become overloaded and were obliged to sell out at a sacrifice. The culmination of the movement seemed, however, to be reserved for Thursday, when, after some preliminary hesitation, the selling was resumed on an even more heavy scale. Money rose to 25 per cent. on call, and time loans were almost unattainable. Accompanying this came reports of a disagreement between leading bankers and certain prominent railway officials, to which point was given by the extreme weakness of the Harriman group. The parties in interest, however, emphatically denied any such occurrences. In the afternoon of Thursday there was another outbreak of selling, and the market closed weak at about the lowest figures, under the lead of Union Pacific, Northern Pacific, Copper, and the securities which the street customarily associates with Standard Oil influences. The announcement that Secretary Cortelyou had decided to prepay $25,000,000 of the 4 per cent. bonds which mature July 1 came after the market had closed, so that this, with his arrangements for depositing customs receipts in the national banks, could not affect the market at that time. Friday, however, brought with it a decided recovery in Americans at London, which was reflected by an advance at the opening in New York, ranging from 5 to 10 points in many of the issues which had suffered the most severely in the demoralization of the preceding day. A good deal of uncertainty naturally prevailed regarding the position of firms or individuals, but as no disasters were announced, the somewhat firmer tone was maintained throughout the morning hours, and in the afternoon there was a further rally almost as violent in its character as the decline of the day before.

Boston Stock Market.

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and for the thirty-six weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
March 9, 1907	338,418	4,124,107	5,038,650	3,187,363
March 10, 1906	328,993	3,377,569	3,159,190	3,582,399
March 11, 1905	286,325	2,726,453	5,143,767	3,718,789
Season				
July 1, 1906, to March 9, 1907	14,847,467	188,359,481	144,276,919	143,161,387
July 1, 1905, to March 10, 1906	14,290,017	198,353,156	139,226,676	162,473,313
July 1, 1904, to March 11, 1905	12,525,584	176,557,339	132,468,020	118,575,093

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Mar. 8, 1907	Mar. 1, 1907	Mar. 9, 1906
American	4,128,682	4,238,468	3,501,957
Other kinds	1,329,000	1,266,000	1,593,000
Total	5,457,682	5,504,468	5,094,957

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Mar. 8, 1907	Mar. 1, 1907	Mar. 9, 1906
Great Britain and continent	2,987,000	3,008,000	2,543,000
Egypt	227,000	232,000	180,000
India	642,000	618,000	686,000
United States	1,622,000	1,646,000	1,386,000
Total	5,458,000	5,504,000	5,095,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	256,204	219,381	155,764
Season	11,643,558	11,387,354	9,130,102

Boston Wool Market.

The greater part of the interest during the past week was in foreign grades, as the available stocks of domestic wool are very small, and the foreign wools direct via London and overland have been arriving with much freedom. At the same time domestic wools have sold moderately, and if the stocks were larger more sales could have been consummated, for the demand has been very good, and many grades have been entirely cleaned up. The market is in a very good condition, and the firm tone prevailing has been strengthened by the firm opening of the sales in London. The mills are still running on worsteds, and for this reason staple wools have been in good demand, the sales of the week including fine and fine medium clothing wools and staple and scoured territory. Fine staple Idaho and Montana sold at 24 cents, scoured territory at 68@70 cents for fine and 66@67 cents for fine medium, XX Ohio fleeces at 34 cents, fall Texas at 22@23 cents, and fall California at 58 cents for small lots. Quarter, three-eighths and half blood territories are in such small supply that little has been done. Offerings of clothing wools are fairly liberal, but they go slowly, owing to the delayed appearance of the promised improvement in the goods market in that direction. In Arizona the newly shorn wools are fairly active, selling at 16@17 cents for heavy and defective and 20@21 cents for a few choice lots. It is evident that there will be less contracting in the west this season than for several years, owing chiefly to the high money rate, the moderate interest in domestic wools, and the policy of the mills in not carrying more wool than is actually needed. The London sales opened very firm, and, contrary to expectations, low crossbreds opened fully as high as at the previous sales. American buyers are in attendance and are reported to be purchasing freely. The new foreign wools are selling well in the local market and are quoted at about 43@44 cents for 70s, 42@43 cents for 64s, 44 cents for 56s, 43@44 cents for 50s and 42 cents for 46s.

ORIGIN OF SALT INLAND SEAS.

All rivers take up salts from the soil, and so all lakes are salt; but in so-called fresh-water lakes the water is changing all the time, and so the salt, which is in very minute amounts, does not accumulate. When there is no outlet the water leaves the lake only by evaporation, and the salt remains, slowly concentrating through the years. In an article on the Great Salt lake of Utah, in *Cosmos* (Paris), translated by the *Literary Digest*, Paul Combes brings out this fact clearly and shows the falsity of some former ideas regarding the origin of salt inland seas. After describing the great western basin in which Salt lake lies, and its numerous similar, but smaller, bodies of water, he goes on to say:

"To explain the existence of these numerous salt lakes, some naturalists have asserted that the great western basin was formerly occupied by the sea and that it was elevated gradually to its present altitude. This hypothesis is absolutely gratuitous and useless. * * * Geographers confound, under the general name of 'lakes,' the results of two essentially distinct hydrographic phenomena, which give rise on the one hand to fresh-water lakes and on the other to salt lakes.

"Fresh-water lakes are always only expansions of rivers, due to the particular topographical configuration of a valley. They are all characterized by the fact that the water that they receive runs out, either continuously or intermittently, and that the chemical constitution of their water remains constantly the same as that of the streams and rivers of the same region. Salt lakes, on the other hand, are always closed basins, without outlet, and their water is removed only by surface evaporation. These facts being well understood, we see at once why the former lakes contain fresh water and the others salt water. Water is Nature's great solvent. Hardly a single substance, simple or compound, escapes its dissolving action. Consequently, the water that flows over the earth's surface or in its depths contains constantly in solution substances that finally accumulate in the great common reservoir, the ocean, whose mass, removed only by evaporation, becomes more and more charged with saline matter."

Applying these principles to the great western basin, the writer notes that a vast fresh-water lake once occupied this whole region, with a double outlet to the south and the north. The whole region has been subjected to alternate depression and elevation, and there came a time when both outlets were closed, after which the water became first brackish, little by little, and then salt. The author goes on:

"Of all the lacustrine basins without outlet that occupy this region, the most remarkable is the Great Salt lake. * * * While sea water has ordinarily only 4 to 5 per cent. of salt, the water of Great Salt lake has 20 per cent. * * * But besides this there is a peculiarity which, all considerations of physical geography aside, would suffice to negative the hypothesis of an ancient communication between this lake and the sea. In fact, although the water is salt, it is far from having the same composition as that of the ocean. In the latter, sodium chloride (common salt) prevails; in the former, sodium sulphate ('Glauber's salts'). The salt crystals that are deposited spontaneously on the shores of Great Salt lake, irregular, translucent, without needles or prisms, * * * are composed almost entirely of sodium sulphate, with traces of the chloride and carbonate. They are formed in great abundance in winter and disappear during the summer, dissolved by the rain. A company (the Inland Crystal Salt Company) has been formed to exploit this substance, and gathers great masses of it every winter. * * *

"There is one other great lake whose waters contain chiefly sodium sulphate—Lake Van, in Asia Minor. There should be noted, in closing, a fact that confirms in all points the law that we have stated regarding closed lakes and lakes with outlets.

"To the south, and quite near Salt lake, is situated Utah lake, of smaller size, whose waters are fresh and contain trout that are highly esteemed. This follows solely from the fact that it empties into the former lake through an outlet to which the Mormons have given the name of the Jordan. There is, in fact, a certain physical analogy between this water course and the biblical Jordan, which carries the fresh water of the sea of Tiberias into the heavily salted waters of the Dead sea."

SOME FORGOTTEN IRON-ORE HISTORY.

The *Bulletin* of the American Iron and Steel Association relates that "less than forty years ago Lake Champlain iron ores were very popular for fettling in puddling furnaces as far west as Pittsburgh, but their use for this purpose is now confined to eastern rolling mills. It was in 1872 that Lake Champlain ores were first used for fettling at Pittsburgh. From June to December of that year 20,580 tons of these ores were received in that city. Lake Superior and Missouri ores soon superseded Lake Champlain ores at Pittsburgh for the purpose mentioned. Forty years ago it was also supposed that the iron made in the forges of the Lake Champlain district would be largely used in the production of crucible steel, and many tons were annually used for this purpose at Pittsburgh

and elsewhere, but the presence of phosphorus beyond the prescribed limits in some of the Champlain ores and the high cost of producing Champlain iron in charcoal forges combined in after years to reduce the demand by crucible steel manufacturers for the iron of this district. Some of the recently developed Champlain ores are, however, very low in phosphorus.

"The iron ores of Missouri received at one time a great deal of attention from our iron and steel manufacturers, but as far back as thirty years ago they were overshadowed by the richer and more easily mined ores of other localities, and their production declined from these causes. The leading iron-ore mines of Missouri have since been practically exhausted. The best known mines are located at Iron Mountain and Pilot Knob. The former have been operated since 1845 and the latter since 1847. Iron Mountain alone has produced over 3,000,000 tons of ore, and Pilot Knob has produced over 1,000,000 tons. In 1872 there were mined and shipped from Iron Mountain alone 269,480 tons. A large part of the production of Iron Mountain and Pilot Knob was taken thirty and forty years ago to points on the Ohio river, but in more recent years shipments have been mainly to nearer localities and have been inconsiderable in quantity. The receipts of Missouri iron ore at St. Louis in 1873, chiefly for shipment to other localities, amounted to 349,357 tons. Of the total receipts in that year 113,327 tons were shipped by river and 63,717 tons by rail. In those days Pittsburgh was a leading purchaser of Missouri iron ores, her furnaces and rolling mills taking 35,440 tons in 1871, 63,420 tons in 1872 and 113,069 tons in 1873. The production of iron ore by all the mines of Missouri in the census year 1870 amounted to 159,680 tons, in the census year 1880 to 344,819 tons, and in the calendar year 1889 to 265,718 tons. The production has since declined. In 1905 it amounted to 113,012 tons, but in some previous years it had fallen considerably below 100,000 tons annually.

"In late years shipments of southern pig iron to northern and western markets have constituted a leading feature of the home iron trade, but only a little more than thirty years ago these shipments were almost unknown, and southern men were looking to the north for a market for their iron ores. This was in 1872, 1873 and 1874, in which years considerable quantities of iron ore from Tennessee, Alabama and Georgia were shipped to furnaces in Indiana and on the Ohio river. The trade began in 1872, reached its culmination in 1873, and came to an end in 1874. In 1873 George H. Hull, of Louisville, shipped to the north about 25,000 tons of Alabama brown hematite iron ore, mined on the Selma, Rome & Dalton Railroad, and about the same number of tons of red fossiliferous iron ore, mined near Birmingham. A considerable part of these ores was shipped to Brazil, Knightsville, Terre Haute and Harmony, in Indiana, and to Mingo Junction and Steubenville, in Ohio. These ores when delivered cost from $7.75 to $9.25 per ton, and two tons were required to make one ton of pig iron, and they would not make Bessemer pig iron."

WAGES OF WORKMEN IN THE PITTSBURGH DISTRICT.

"From the coal mines, mills, shops, stores and offices of the Pittsburgh district, always buzzing like a beehive with industrial activity, comes an army of toilers who require a king's ransom for their daily wage," says the Memphis *News Scimitar*. "Over a third of a million strong, and representing nearly every trade or occupation requiring strength, skill and brains, this army furnishes the human element of the forces which move the greatest tonnage of any industrial district in the country.

"For every weekday in the year Pittsburgh pays to her men of brawn and skill more than $1,150,000. To make up this great pay roll a small army, composed of employees of 120 banking institutions and over 4,700 timekeepers and paymasters, is kept constantly at work every working day in the year. By contributing their pay for one day of each week these Pittsburgh workers, if they wished, could raise fifty-two of the number to the ranks of millionaires every year.

"There are a great many unskilled laborers, too, in Pittsburgh and its immediate vicinity, but no account is taken of them in making up the district's wonderful million-dollar-a-day pay roll. Upon it are the names of some half a dozen classes—coal miners and coke workers, iron and steel workers, glass workers, employees of manufacturing plants, those of building trades and contracting work, and office workers and mercantile clerks. Accounted for are 372,400 workers who draw upon the pay roll of Pittsburgh to the extent of over $1,150,000 for every weekday of the year.

"And this in a population estimated at something over a million and a half, occupying a district only twenty-five miles square. Only the workers at trades and occupations which maintain a permanent pay roll are considered; so that the million-a-day estimate is considered really low, as the number not engaged in any regular calling or pursuit would make no mean addition to the list. It can be seen readily that 'pay day' in Pittsburgh is an occasion of moment.

"The return of this great amount of money to the banks is accomplished in an incredibly short time, yet this is not an indication of spendthrift habits on the part of the workers, for a majority of them have homes for which they are paying. It is estimated that over 80 per cent. of the workers in the district own their homes, and many own other property from which they derive incomes. Fifteen years ago, when the wages of the steel and iron workers were at their height, there were men in the district who made from $12 to $28 a day."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 23, 1907.

A fresh illustration of the unresting and far-reaching energy of the President is found in his appointment of a commission to prepare and report a comprehensive plan for the improvement and control of the river systems of the United States. The body to which this task is committed is to be known as the Inland Waterways Commission. In the letter appointing the commission Mr. Roosevelt says that the control of our navigable waterways lies with the federal government and carries with it corresponding responsibilities and obligations. Our inland waterways as a whole have, he says, received scant attention, but it is becoming clear that our streams should be considered and conserved as great natural resources, and that the time has come for merging local projects and uses of the inland waters in a comprehensive plan designed for the benefit of the entire country. There is, Mr. Roosevelt declares, reason to doubt whether any development of the railroads possible in the near future will suffice to keep transportation abreast of production, and there appears to be but one complete remedy—the development of a complementary system of transportation by water.

Any plan for utilizing our inland waterways should, the President says, consider floods and their control by forests and other means; the protection of bottom lands from injury by overflows and of uplands from loss by soil wash; the physics of sediment-charged waters and the physical or other ways of purifying them; the construction of dams and locks not only to facilitate navigation but to control the character and movement of the waters, and should look to the full use and control of our running waters and the complete artificialization of the waterways for the benefit of the people as a whole. It is not possible, the President points out, to frame so large a plan for the control of the rivers without taking account of the orderly development of other natural resources, so he asks that the commission shall consider the relation of the streams to the great permanent natural resources and their conservation for the making and maintenance of prosperous homes. So any such plan, to be feasible, should recognize the means for executing it already in existence both in the Federal Departments of War, Interior, Agriculture and Commerce and Labor and in the states and their subdivisions, and must not involve unduly burdensome expenditures from the national Treasury. It is a most important work that President Roosevelt has given in charge to the commission—one of the most important, indeed, that it has been given to him to initiate—and its progress will be watched with an interest which will not be bounded by the lines of any section or locality.

For a time the news from Central America was of a rather uninteresting character, consisting, as it did, of reports of small engagements, indicating no result of a decisive character. A change has taken place within the week. The defeat by the Nicaraguan forces of the allied armies of Honduras and Salvador, and the capture of the ports of Trujillo and La Ceiba, in Honduras, by the Nicaraguan naval forces, put a new face upon the situation. The news of the capture of the latter place was followed by the report that in order to protect American interests bodies of marines had been landed from the gunboat Marietta at the two ports mentioned, and that three other naval vessels were engaged with the Marietta in patroling both coasts of Central America. Taken in connection with recent conferences between Secretary Root and the Mexican Ambassador, this action is regarded in some quarters as an indication to the warring republics that intervention may be looked for in case they do not speedily cease their hostilities. It would, it is thought, be embarrassing for the United States to enter The Hague conference with such a war as that now in progress in Central America being carried on almost at its doors.

The Wall street stock market has this week presented the appearances natural after a period of semi-panicky conditions. While at one time in the earlier portion of the present week there were some indefinite reports of trouble, it being intimated that certain speculative interests or Stock Exchange houses might be involved in serious difficulties, nothing of the kind actually transpired. In fact, there was good reason for thinking that disquieting rumors of this nature were put out for the purpose of facilitating operations of bearish manipulators, who are still working with vigor and a certain amount of success to bring about still lower values. On the other hand, it may be true that when the depression was at its worst some Wall street interests found themselves in a dangerous position, and it is hardly doubted that many brokerage establishments carried customers through the trouble, even though margins had been exhausted, because of the certainty that the losses which would have occurred when prices were at the lowest point could not be made good by the victims. What the market saw this week, therefore, represented to a large extent the supplemental liquidation of these weakened accounts, this being a natural and usual sequence of such a readjustment as the market has recently undergone. In fact, it is a perfectly normal occurrence, and one which is in accordance with the experience of past occasions of this kind, that following the violent break and excitement of a week ago, values should after a recovery tend to gravitate lower once more, even though the extreme figures of the decline are not in all cases reached again.

Changes in the official discount rate of the Bank of France are proverbially infrequent. That institution had, in fact, maintained 3 per cent. as its figure ever since May 25, 1900, and while there had been during that time no less than twenty-eight changes in the Bank of England rate, while at New York the fluctuations and variations in money rates had been of a bewildering kind, it had come to be almost accepted as an axiom that no alteration would be made in the Paris quotation except under the pressure of extreme necessity. On Thursday of the present week the somewhat unexpected announcement came, however, that the management of the Bank of France had marked that institution's discount figure up to 3½ per cent., and while this circumstance was to all appearances ignored in the stock market, the importance of its bearings upon the international financial situation was fully appreciated in banking circles. Abundant reason for the step is furnished by the fact that exchange on London has become abnormally high, having this week reached 25 francs 33 centimes, at which figure it is possible for gold to be exported from Paris to the former city. Little doubt exists, therefore, that the advance was decided on as a protective measure, calculated to safeguard the French gold reserves, and as far as possible to throw upon the British capital the burden of supplying the gold which seems destined to come to New York sooner or later as a consequence of the large credit balances which had been established by the volume of exports in this country, supplemented as they are by the very heavy purchases which foreigners have made of a railroad bond and short-time notes.

Not a little anxiety has been expressed in New York banking circles regarding the policy which the new Secretary of the United States Treasury, Mr. Cortelyou, will adopt in regard to a number of matters of considerable importance to the money market and the financial community generally. In a number of instances the present head of the Treasury seems to be acting with a good deal of deliberation, and no further action of an important kind has been taken by him since the recent decision to redeem $25,000,000 of the 4 per cent. government bonds, and to take advantage of the provisions of the Aldrich bill in respect to placing customs receipts in the national banks at other cities than New York. It is, for instance, in the opinion of some financial people, of much importance to learn what measures will be adopted in respect to the remaining $100,000,000 or so of the 4 per cents which mature on July 1 next. Another point of much interest is the intimation which comes to hand that Mr. Cortelyou is indisposed to continue the policy adopted by Secretary Shaw and his predecessors of accepting railroad bonds or municipal securities of the savings-bank grade against deposits of government funds in the banks, it being asserted that this restriction as to the kind of security required will go far toward minimizing any beneficial effect on the money market of the deposits of government customs receipts in the banks.

As might be expected, the convention which lately sat at Guthrie prepared a constitution for the new state of Oklahoma which contains some rather radical features. Provision is made for an elective state railway commission and for 2-cent fares. Railway companies are prohibited from owning any productive agencies or coal lands. Corporations are prohibited from owning any more land than is absolutely necessary for the conduct of their business. Corporate books are made subject to inspection, and the issuance of watered stock is forbidden. A stringent liquor law, prohibiting not only the sale but the introduction of liquor into the state, is provided for. A system of initiative and referendum patterned after the Oregon law has been adopted, and provision is made for the nomination of state officers and United States senators by primaries. Succession in state offices is prohibited. A committee has been appointed to negotiate for the purchase of the mineral lands in the Indian Territory, and state ownership and operation of coal mines seems to be contemplated.

THE WAVE OF ANTI-RAILROAD LEGISLATION.

A few weeks ago attention was directed in these columns to the agitation in a number of states in favor of fixing a maximum rate of 2 cents per mile for the transportation of passengers on railways. That the movement is a widespread one is generally known, but it is not so well understood just how extended it has become. An interesting collection of telegraphic dispatches printed in a recent issue of the New York *World* supplies information bearing upon this point. These dispatches are from correspondents located at the various state capitals and bring the situation as regards the progress of anti-railroad legislation pretty well down to date. It appears from the information thus collated that legislation affecting the railroads unfavorably has been introduced in the legislatures of twenty-eight states; that in nineteen states measures have been passed or are pending, with a probability of passing, arbitrarily reducing passenger rates, and that in twenty states reciprocal demurrage measures have been passed or are pending. In addition, a number of states have conferred extraordinary powers upon their railroad commissions.

It appears from the detailed reports that in Arkansas, Indiana, Iowa, Missouri, Nebraska and Oklahoma bills have been passed fixing the maximum passenger rate at 2 cents per mile; in Oklahoma with the proviso that the rate is not to be confiscatory or below a proper charge, based upon the cost of service. In North Carolina a maximum passenger rate of 2¼ cents per mile has been fixed for all roads more than sixty miles in length. In Alabama, North Dakota and South Dakota the maximum passenger rate has been fixed at 2½ cents per mile, in Kansas at 3 cents per mile, and in Nevada a bill is awaiting the governor's signature which fixes the maximum passenger rate at 5 cents per mile. Reductions of freight rates are directly provided for in Kansas and Nevada, and in a number of the states, including Alabama, Arkansas, Indiana, Kansas, Missouri, Montana, Nevada and Oregon, railroad commissions have been given large powers of control over such rates, among other matters. In a number of the states, including Arkansas, Iowa, North Dakota, Oregon and Washington, reciprocal demurrage laws have been enacted, and in a number of others similar measures are pending. Legislation of other kinds unfavorably affecting railroads has been enacted or is pending in a number of the states.

All this activity directed against the railroads has not passed without criticism or retaliatory action on their part. In Colorado the transcontinental lines are threatening the curtailment of extension work and service; in Iowa the railroads threaten to cut off all excursion rates and some of their best trains and have already stopped cheap rates to charities and commissioners; in Missouri the railroads announce their intention to fight the 2-cent fare law on the ground that it is unconstitutional and involves confiscation of property; in Montana they are preparing to attack the law creating the railroad commission, and in Nebraska the railroads will contest the constitutionality of the 2-cent fare law, and threaten to cut off reduced rates for ministers and charities, to curtail train service and to abandon construction work. In Oklahoma, South Dakota and Texas the abandonment of work on new lines and on extensions is announced, and in Tennessee the roads threaten to cut off passes to members of the legislature and other office holders if the pending 2-cent passenger rate bill is enacted.

Of public protest against the kind of legislation affecting railroads now being so actively formulated, there has been no lack at any time on the part of railroad men. There are indications, however, that in some respects the attitude of those in control of railroads toward the public is undergoing a change. An indication of this is found in an address delivered at the annual dinner of the Atlanta Chamber of Commerce by President Finley, of the Southern Railway Company. Mr. Finley expressed the belief, naturally enough, that there is danger that legislation intended to regulate railways may prove to be an obstacle to their extension and development, and may tend to make worse, instead of better, the conditions sought to be remedied. That has proved to be the case in some instances in the past, and may prove so again. At the same time, Mr. Finley said, it may be accepted now, as admitted, that the railways of the present and of the future must cultivate the good will and coöperation of the public, and must do this by the adoption and promulgation of economically and commercially sound principles as to the conduct of their business. Their policy, he continued, must be one of frank publicity, in which the people dependent on a railway system for transportation must be taken into its confidence. This is a view of the matter which, if acted upon consistently by the railroad managers, might obviate much of the criticism that has been directed against them, and that has found and is finding expression, in some respects, no doubt, ill-considered, in the legislation referred to above.

THE RUSSIAN GOVERNMENT'S LEGISLATIVE PLANS.

Thus far the most important day in the history of the new Russian Duma was Tuesday, the day on which Premier Stolypin read to that body the ministerial declaration of policy. There can be no doubt of the high import of this declaration to the people of Russia, and of its interest to the rest of the world, which is watching to see whether a constitutional government is to emerge at this time from the conditions which have hitherto made autocracy possible. The declaration was apparently framed with great care and with a view to avoiding matter of controversy. M. Stolypin prefaced his detailed statement of proposals with the declaration that the government was creating standards of life which would change Russia into a legal state on the basis of the granted reforms, and that the chief task to be accomplished was that of coördinating the old and the new principles of government. All the bills to be submitted to the House had, he said, been drawn up with the general idea of upholding the new legal conditions arising from the recent reforms. The country, he said, must be transformed into a constitutional state, and real measures must be adopted to define and determine the rights of the state and of private individuals, and to abolish the contradictions between the old and the new laws and the arbitrary interpretations placed upon them by private persons as well as officials.

Owing to the urgency of the situation, M. Stolypin continued, certain laws had been promulgated before the meeting of Parliament and were now submitted for its consideration. He did not think it necessary to emphasize the importance of urgency in the adoption of the laws determining the civic status of all classes and legislation under which the peasants could obtain more land, thus removing the hardships now felt by the most nervous section of the Russian nation. To meet these conditions the government had, he recalled, promulgated laws handing over crown lands and imperial estates to the peasants, and otherwise improving their lot. In addition, the government was now preparing a series of bills for carrying out the grants of the imperial manifesto of October 30, 1905, which had not yet been made effective.

The measures proposed by the government which would be laid before the Duma were, M. Stolypin said, intended to secure the following objects, namely:

Freedom of speech and of the press.
Liberty of religion.
Habeas corpus, on the same basis as other states.
The substitution of a single form of martial law for the various decrees of exceptional security.
Local self-government.
Reform of the Zemstvos.
Responsibility of officials.
Agrarian reforms.
The abolition of the free entry of goods into Vladivostok.
The completion of the Trans-Siberian Railroad in Russian territory.
Popular education.

Some statements were made by the Premier regarding features of certain of the proposed measures. For example, the government deemed it necessary before legislating to secure liberty of religion to lay down firmly the principle that all legislative changes must recognize that the Orthodox Church was privileged, while providing that the rights of that church must not infringe those of others. The laws touching personal liberty would, M. Stolypin added, be based on the general principles existing in constitutional countries, all interference with this right being reserved for the judicial authorities. The government had decided to abrogate the policy of administrative exile. A complete reorganization of the Zemstvos and of the municipal and other local administrations. The changes proposed here, it was explained, tended to centralize all civil power in the various districts, and the reform of the local courts would be based upon the election of the justices of peace by the local populations. Bills patterned on the procedure of civil and criminal law in other European states would be presented which would constitute an entirely new criminal code, and laws touching mortgages and real estate would also be presented.

The government, M. Stolypin said, recognized that it was the duty of the state to improve the lot of the workmen, and intended to introduce legislation providing for workmen's insurance, old-age pensions and medical relief and shorter hours for all working people, and prohibiting night and underground work for women and children. After referring to the propositions for the abolition of free entry ports in the Far East and the railway-extension project, the Premier said that the government recognized educational reform as necessary to assure the realization of other measures, and announced that a system of free education would be established, and that later this would be made compulsory. Finally, dwelling upon the extraordinary requirements of the government, M. Stolypin said that those requirements demanded extraordinary resources, and that the Minister of Finance would therefore propose fresh taxation, including an income tax and the modification of the death duties.

The reception of this extensive series of proposals by the Duma was interesting. The reading of the document was not interrupted, strict silence being maintained until the close, when M. Stolypin was applauded by the Conservatives. A fiery speech was made by Prince Zeretelli, who introduced on behalf of the Social Democrats, the most radical element in the Assembly, a resolution arraigning the government for violating all the rights promised in the imperial manifesto of October 30, 1905. On behalf of the Constitutional Democrats, Prince Dolgoroukoff moved that the House, having heard the ministerial declaration of policy, proceed to the order of the day. A debate followed in which only speakers representing the Conservatives and the Social Democrats took part, the other parties with one consent abstaining. The motion of the Constitutional Democrats was adopted, but not before Premier Stolypin had uttered a warning which was not without significance. The House, he said, must confine itself to legal paths. While honest criticism was welcomed, the government would not permit revolutionary assaults or firebrand tactics. If the House chose to cry "Hands up!" to the government, let it beware. The Council of the Empire adopted a resolution expressing willingness to cooperate with the government in its legislative programme. It will be seen from the above résumé that the Lower House has adopted a policy simply of observation and attention. It did not antagonize the ministry before the proposals of the latter had been seen in detail, but, on the other hand, it did not acclaim simply a general announcement of intentions. The time for considering the substance of the government's proposals will come later; the Duma has lost nothing by not imitating the Premier, whose closing threat must be regarded as at least a blunder.

RAILWAY GROSS EARNINGS INCREASE, BUT NET DECREASE.

Just now the figures of railway gross and net earnings are being watched with more than ordinary interest, for it has come to pass that at least one item of the returns, the net receipts, are of a different tenor from that with which the railway world has been so familiar for a long time past. In other words, the meat of the story may be extracted by saying that the latest report, that for January the current year, shows that while gross earnings continue to expand, net revenues, on the other hand, tend to shrink—that the word increase, which had become somewhat monotonously characteristic of net receipts, has given place to its antithesis, the word decrease,

so far as net earnings are concerned. Whether this tendency is to continue, only the passing of time will tell, but in any event current returns are less cheerful than they were from the ultra-optimistic viewpoint at any rate. Yet if one digs under the surface the results produced will be anything but unfavorable, especially if the figures of 1906, with which we are now comparing, are taken into consideration. Thus the latest available data show that gross earnings for January this year aggregated $126,943,223, a gain of $9,674,286, or 8.2 per cent., over the figures for the like month in 1906, while net revenue amounted to $34,478,607, which sum reflects a decrease of $860,457, or 2.4 per cent., from January last year. Now further analysis brings out the fact that gross earnings in January, 1906, were of very remarkable proportions, the increase over January, 1905, being no less than 20.3 per cent., while the gain scored by net earnings reached the huge ratio of 44 per cent. Therefore it will be seen that comparison on the present occasion is with a period of enormous expansion in 1906, owing, first, to the excellent business and, secondly, to the ideal weather then prevailing. That business was good in January the current year cannot be gainsaid, hence the really noteworthy gain of 8.2 per cent. in gross earnings. When we come to consider net earnings, however, we get a series of what might be termed adverse factors. For instance, it is well known that operating expenses have been materially increased—11.6 per cent. in January—that wages are higher, that materials have advanced in price, that traffic has been congested, and that weather conditions were adverse—the reverse of what they were in January, 1906. So, giving full play to all the factors cited, the wonder is that the decrease was not larger than 2.4 per cent., which is another way of saying that net earnings are quite favorable, all things considered. Before leaving the subject we will again advert to the very favorable nature of net earnings in January, 1906, which, as already intimated, were owing in large part to the practically ideal operating weather experienced in that month, and incidentally show how net revenue then increased, while showing at the same time how dissimilar conditions in January this year affected the comparison. For this purpose we have taken some remarkable percentages of gain in the net earnings of January last year as compared with those of 1905, and set against them whatever change occurred in January the current year, the result being this statistical exhibit:

	1906	1907
Rock Island	Inc. 98.0	Inc. 20.0
Illinois Central	Inc. 36.8	Dec. 8.2
Wabash	Inc. 145.7	Inc. 20.8
Baltimore & Ohio	Inc. 80.7	Dec. 18.2
Erie	Inc. 104.6	Dec. 12.4
Penn. (east of Pitts. and Erie)	Inc. 81.8	Dec. 6.2
Central of New Jersey	Inc. 22.6	Dec. 5.1
Chesapeake & Ohio	Inc. 76.2	Dec. 30.6
Norfolk & Western	Inc. 42.6	Dec. 3.2
Southern Railway	Inc. 42.6	Dec. 39.1
Atchison	Inc. 45.8	Inc. 3.9
St. Louis & San Francisco	Inc. 44.1	Inc. 13.4
Missouri Pacific	Inc. 70.4	Inc. 9.4
Canadian Pacific	Inc. 200.2	Dec. 56.7
Southern Pacific	Inc. 24.5	Inc. 45.4
Union Pacific	Inc. 11.6	Inc. 19.3

But, after all, the whole story of gross and net earnings in January, 1907, as compared with those of that month in 1906, may be told in the following few lines, showing gross income, operating expenses and net revenues:

	1907	1906	*Changes*
Gross earnings	$126,943,223	$117,268,937	Inc. 8.2
Operating expenses	91,464,616	81,929,873	Inc. 11.6
Net earnings	34,478,607	35,339,064	Dec. 2.4

The companion piece of the above table is found in the following, which shows to what extent the various sections contributed to the grand totals of gross earnings in January this year and last:

	1907	1906	*Inc.*
Northwestern	$7,647,385	$6,982,001	9.5
Central-western	10,394,817	10,079,353	3.1
Trunk lines	28,821,809	28,117,357	2.5
Eastern	2,534,365	2,440,082	3.8
Coal roads	10,537,143	10,049,968	4.8
Southern	23,771,653	22,372,495	6.2
Southwestern	21,800,835	19,013,480	14.1
Pacific	21,435,216	18,214,201	17.6
Total	126,943,223	117,268,937	8.2

Increases rule in every instance, the two most noteworthy being reported by the Pacific and southwestern groups—17.6 per cent. and 14.1 per cent. respectively. The northwestern roads report a gain of 9.5 per cent., while the southern lines return one of 6.2 per cent. and the hard-coal roads one of 4.8 per cent. Following these are the eastern roads with an advance of 3.8 per cent., the central-western lines with an increment of 3.1 per cent., and, finally, the trunk lines with an accretion of 2.5 per cent.

The showing as regards net earnings for January, 1907 and 1906, is as follows:

	1907	1906	*Dec.*
Northwestern	$1,830,626	$2,037,554	10.1
Central-western	2,874,581	2,916,013	14.4
Trunk lines	6,985,506	7,805,584	10.5
Eastern	418,477	644,958	35.1
Coal roads	3,163,509	3,354,059	5.6
Southern	5,820,642	6,814,450	14.5
Southwestern	6,669,738	5,842,345	*14.1
Pacific	6,715,528	5,924,101	*13.3
Total	34,478,607	35,339,064	2.4

* Increase.

Decreases are plentiful in the above, though two groups, the southwestern and the Pacific, furnish increases—14.1 per cent. and 13.3 per cent. respectively. The largest loss is reported by the eastern roads, 35.1 per cent., while the next in this respect is contributed by the southern group, 14.5 per cent., after which the central-western roads appear with a loss of 14.4 per cent. The other declines are 10.5 per cent. reported by the trunk lines, 10.1 per cent. by the northwestern group, and 5.6 per cent. by the hard-coal carriers.

Percentages of change for a series of months are set forth in the following:

	Per cent. inc. *Gross*	*Net*
	1907	1907
January	8.2	*2.4
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

The leading increases in gross earnings in January, 1907, as compared with January, 1906, are given in the subjoined:

Southern Pacific	$2,514,841
Atchison, Topeka & Santa Fe	930,287
Pennsylvania system	885,200
Union Pacific	834,596
St. Louis & San Francisco	685,532
Rock Island	682,087
Missouri, Kansas & Texas	600,172
Louisville & Nashville	357,774
Grand Trunk of Canada	344,547
Reading	234,776
Atlantic Coast Line	234,484
Norfolk & Western	183,766
Central of Georgia	170,715
St. Louis Southwestern	167,778
Illinois Central	142,621
Seaboard Air Line	142,589
Nashville, Chattanooga & St. Louis	141,100
Missouri Pacific	134,878
Denver & Rio Grande	118,833
Kansas City Southern	118,502
Mobile & Ohio	106,617
Total	9,732,635

Marked decreases in gross earnings make this showing:

Chesapeake & Ohio	$225,528
Canadian Pacific	217,163
Baltimore & Ohio	207,907
Minneapolis, St. Paul & Sault Ste. Marie	154,415
Cincinnati, New Orleans & Texas Pacific	103,901
Total	908,914

Prominent losses in net earnings are contributed by the following roads:

Canadian Pacific	$718,906
Baltimore & Ohio	447,473
Southern Railway	440,176
Pennsylvania system	338,800
Chesapeake & Ohio	271,263
Minneapolis, St. Paul & Sault Ste. Marie	262,242
Canada Northern	158,200
Erie	130,984
Illinois Central	124,017
West Jersey & Seashore	111,100
Total	3,003,161

The more important gains in net earnings appear in the following:

Southern Pacific	$1,045,292
Union Pacific	479,646
Missouri, Kansas & Texas	360,747
Rock Island	221,415
Kansas City Southern	164,648
St. Louis & San Francisco	153,774
Total	2,385,522

It will be noted that the roads reporting increased net receipts are those operating in the southwest and Pacific sections of the country.

COTTON THE SHEET ANCHOR OF EXPORT TRADE.

The February foreign trade returns show no important changes in tendencies from recently preceding months. Imports continue to gain at a faster rate relatively than do exports, which latter, were it not for large export movement in cotton, would actually fall below last year's figures at this time. This latter feature, indeed, deserves attention, because while exports of breadstuffs and provisions are dropping behind, cotton keeps up its immense movement and accounts for all of the gain in February exports and two-thirds of the gain shown in the eight months' returns.

The exports of merchandise for February aggregated $159,548,646, a decrease of 15.9 per cent. from January, but a gain of 12.7 per cent. over February last year. For eight months of the fiscal year the exports aggregate $1,289,246,296, a gain of 7.6 per cent. over the same period of the preceding year, while imports aggregate $932,925,385, a gain of 16 per cent. over 1905-06. Following will be found the totals of exports and imports for February and the eight months' period ending therewith, with comparisons for two preceding years:

February	1905	1906	1907
Imports—Free of duty	$48,305,414	$46,421,006	$54,990,559
Dutiable	54,778,999	57,811,873	68,194,650
Total	103,084,413	104,232,879	123,185,209
Exports—Domestic	105,023,472	139,763,307	157,526,143
Foreign	1,847,310	2,003,251	2,022,503
Total	106,870,782	141,766,558	159,548,646
Excess of exports	3,786,369	37,533,679	36,363,437
Eight mos. end'g Feb.			
Imports—Free of duty	346,086,038	360,666,539	421,486,104
Dutiable	382,912,888	439,290,981	511,439,281
Total	728,998,926	799,957,520	932,925,385
Exports—Domestic	992,316,671	1,181,517,760	1,273,076,521
Foreign	15,744,137	16,873,623	16,169,775
Total	1,008,060,808	1,198,391,383	1,289,246,296
Excess of exports	279,061,882	398,433,863	356,320,911

The tables showing the preliminary returns of leading exports for February and the eight months throw considerable light on the directions in which exports have expanded and contracted, and are herewith given, with comparisons for two preceding years:

	1907	1906	1905
Breadstuffs	$14,096,664	$19,460,320	$10,594,405
Meats	15,975,436	17,094,539	12,585,561
Animals	2,926,159	3,605,967	3,850,397
Cotton	48,310,102	28,782,905	19,630,909
Mineral oils	6,446,506	5,715,775	4,459,431
Total above	87,754,867	74,659,506	51,120,703
Other exports	71,793,779	67,107,052	55,750,079
Total all exports	159,548,646	141,766,558	106,870,782
	1907	1906	1905
Breadstuffs	$116,880,154	$130,737,216	$63,057,408
Meats	120,903,780	128,663,088	97,068,848
Animals	21,388,586	26,082,195	26,918,117
Cotton	369,854,739	307,109,315	276,953,918
Mineral oils	52,506,768	52,660,845	50,459,458
Total above	681,534,018	645,252,659	514,467,749
Other exports	607,712,278	553,138,724	493,593,059
Total all exports	1,289,246,296	1,198,391,383	1,008,060,808

The total gain in exports in February this year over last is $17,782,000, while the gain in cotton exports alone was $19,528,000, showing that cotton exports made a larger gain than did all exports. Put in another way, while breadstuffs exports decreased 27 per cent., provisions 6.4 per cent. and animals 18.8 per cent., cotton shipments increased 68 per cent. Mineral-oil exports gained slightly, 13 per cent., and all other exports 7 per cent. For the eight months of the fiscal year cotton exports furnished $62,745,000 of the entire increase of $91,000,000, or about two-thirds, and other exports gained $54,000,000. In other words, cotton exports increased 20 per cent., and all other exports gained only 3 per cent.

PETROLEUM IN THE CENSUS.

One of the most important census returns of those made at the five-year interval is that regarding petroleum refining, published last week. In addition to showing the increase in the number of persons employed, of establishments engaged in refining, of capital, cost of raw materials and value of finished products, it shows some notable changes in the location of production, and a notable advance also in the cost of production, due to various causes. The following table presents the general statistics for the establishments engaged actively in petroleum refining at the censuses of 1905 and 1900:

	1905	1900
Establishments	98	67
Capital	$136,280,541	$95,327,892
Salaried officials	1,974	1,201
Salaries	$2,724,065	$1,811,400
Wage earners	16,700	12,199
Wages	$9,989,367	$5,717,087
Miscellaneous expenses	5,297,508	3,330,851
Cost of materials	139,387,213	102,859,341
Value of products	175,005,320	123,929,384

There is here shown an increase of 46.2 per cent. in the number of establishments, of 42.1 per cent. in the capital employed, 36.8 per cent. in the number of wage earners, 48.7 per cent. in the wages paid, 36.2 per cent. in the cost of materials, and 42.2 per cent. in the value of products. The crude petroleum used aggregated 66,982,862 barrels of forty-two gallons, a gain of 28.7 per cent. over 1900. The following tables show the details of the industry as to the kind, quantity and value of products and average price per barrel for the censuses of 1905 and 1900:

Product	*Number of barrels,* 1905	*Value,* 1905	*Average per bbl.,* 1905
Burning oils	34,344,522	$100,571,825	$2.93
Residuum	3,187,921	3,138,361	.98
Paraffin oils	1,644,400	6,210,279	3.78
Paraffin wax	794,068	10,007,274	12.60
Reduced oils	4,352,248	16,794,789	3.86
Naphtha and gasoline	5,811,289	21,314,837	3.67
Neutral filtered oils	504,042	1,942,153	3.85
All other products	....	15,025,802	..

Product	*Number of barrels,* 1900	*Value,* 1900	*Average per bbl.,* 1900
Burning oils	31,266,513	$82,244,961	$2.63
Residuum	596,615	688,455	1.15
Paraffin oils	1,606,783	3,987,037	2.48
Paraffin wax	774,924	7,791,149	10.05
Reduced oils	1,766,990	7,108,168	4.03
Naphtha and gasoline	5,615,554	15,991,742	2.85
Neutral filtered oils	608,185	2,256,626	3.71
All other products	....	3,861,246	..

There is here shown a gain of 21.9 per cent. in the value of burning oils, which aggregated $100,571,825, and of 33.9 per cent. in the value of naphtha and gasoline, as compared with the output of 1900. It will also be noted that the values of all products, except residuum and reduced oils, are higher. Another interesting table is that showing the percentages which the quantity of each product formed of the

total quantity of crude used in the censuses from 1880 to 1905:

	1905	1900	1890	1880
Burning oils	61.0	71.6	65.9	75.2
Residuum	5.7	1.4	4.6	1.6
Paraffin oils	2.9	3.7	2.7	.5
Paraffin wax	1.4	1.8	.9	.1
Reduced oils	7.7	4.0	3.3	1.9
Naphtha and gasoline	10.3	12.9	12.8	10.3
Neutral filtered oils	.9	1.4	..	..

It is here indicated that the proportion of burning or illuminating oils has fallen quite noticeably, while other products have gained.

A feature of interest is the shifting of location, such as for instance the gains in the number of establishments in California, Ohio and Texas. Pennsylvania still holds its position as the premier state. Taken as a whole, the report points to a steadily increasing use for petroleum, which, despite rivals, is increasing its sphere of influence.

EDITORIAL NOTES.

The preliminary statement of the United States Steel Corporation, which accompanied the announcement of the action upon the quarterly dividends on the common and preferred stocks for the three months which ended on December 31, 1906, prepared the stock market for the full results which were displayed in these columns last week. All previous high records as to production and earnings were broken in the year 1906. The surplus net income of $62,642,000 compared with only $17,000,000 in 1905, and while in the year just ended the United States Steel Corporation set aside $50,000,000 for new construction and improvements, the amount appropriated for such purposes the year before was a little more than half that sum, being only $26,300,000. In fact, it is this circumstance which, in the minds of many conservative onlookers, creates such a difference between the position of the United States Steel Corporation and other railway or industrial concerns. While new capital with which to increase facilities or provide needed enlargement of plants has in so many instances to be obtained on what may be deemed really onerous terms, the United States Steel Corporation has been enabled through the appropriation of a portion of its magnificent earnings to provide for the extension of its old plants, and even for the creation of a new industrial establishment—the one at Gary, Ind.—which will add materially to its productive capacity in all lines.

Ten-year comparisons of export trade are favorite ones with those interested in statistics, the more so that present figures make such magnificent showings when put opposite those of a rather poor year such as 1896 was. Hence it is that a recently published table showing the expansion occurring in the shipments of cotton and its products, made by the Bureau of Statistics of the Department of Commerce, has attracted considerable attention. The comparison obtained is as follows:

	1896	1906	*Increase*
Cotton, raw	$233,412,777	$413,137,936	$179,725,159
Cotton manufactures	19,810,609	42,961,048	23,120,439
Cotton-seed oil	5,735,912	13,993,431	8,257,519
Cotton-seed oil cake and meal	4,873,905	14,165,268	9,291,363
Cotton seed	205,032	245,920	40,888
Cottolene, lardene, etc	....	4,801,078	4,081,078
Total	264,068,235	489,304,681	225,236,446

There is here shown a gain in raw-cotton exports of about $180,000,000 in a decade, or an increase of 77 per cent. In the same period the exports of manufactured cotton gained 116 per cent., but the gain in this branch is only $23,120,439, or about one-eighth of the gain in raw-material exports. Perhaps the most notable gain is that shown in the by-products of the industry, such as oil cake, meal, seed and oil products, which combined are three times what they were ten years ago. Cotton and its products of all kinds have gained 85 per cent. in the ten-year period, which compares with an increase of 78 per cent. in our total export trade of all kinds. It will be seen that cotton and its products have gained relatively to a greater extent than has all export trade. The weak spot in our export trade in this direction is, of course, our trade in cotton goods, and the following table, giving the shipments of cloth to different sections of the world, will be found interesting:

	1896, *Yards*	1905, *Yards*	1906, *Yards*
To Europe	14,113,428	5,439,806	5,069,502
To America—

West Indies	14,174,636	54,967,373	51,097,543
South America	47,614,487	53,992,170	54,093,087
Total America	116,236,545	150,524,879	146,105,892
To Asia—			
China	107,063,411	562,732,721	270,799,275
British India	3,148,849	10,907,297	9,593,863
Hong-Kong	....	455,675	568,328
Japan	....	10,441,564	960,207
Philippines	....	9,962,531	12,731,281
Other Asia & Oceania	20,508,274	24,154,197	46,483,702
Total to Asia	130,720,534	618,653,985	341,136,656
Australasia	714,821	7,861,169	8,437,229
To Africa	14,504,407	7,779,185	11,079,641
Not designated	4,921,786	....	1,003
Total exports	281,211,521	790,259,021	511,829,720
Value	$16,245,000	$47,652,000	$32,282,000

The great expansion in this line has apparently been in shipments to Asia, chiefly China. Europe's takings have fallen off, as have those to North America.

One of the notable features of the recent violent depression in stock-market values, and the accompanying liquidation by the larger class of speculative holders of railway and other shares, is the way in which the latter have been bought on the break by investors, more especially by people who have acquired small amounts of such securities. It is believed, indeed, that this buying of broken lots, as they are termed, that is to say, pieces of anywhere from five to fifty shares or more, has been of unparalleled magnitude. Brokerage houses report that never in their experience have they had and executed so many buying orders of this description. The purchasing has come from all parts of the country, and would indicate that, in spite of the reputed scarcity of capital, there is a great deal of money in the hands of people of moderate means, who seem to think that the Wall street convulsion, and the selling of enormous amounts of stocks by large speculators, has offered an opportunity for acquiring dividend-paying shares at figures which make them very attractive from the standpoint of the income return which they yield. To show how far this movement has gone, it may further be mentioned that the transfer offices of many companies have during the past week been congested by the mass of small amounts of stock undergoing transfer, the delays in obtaining the stock after it has been put in for transfer amounting in some cases to several days beyond the usual time for such matters. The remark has, in fact, been frequently made this week that this time the public has got in close to the bottom. That such an absorption of stocks is a sign of confidence, and that in the aggregate it has taken large amounts of securities entirely out of the speculative market, cannot be doubted. Its effect, however, can hardly be expected to be shown at once, though in the long run it will aid materially in reëstablishing an equilibrium and enabling the stock market to recover from the nervousness and apprehension which is at present the symptom most exhibited in financial quarters.

The final ginning report of the Census Bureau, issued on March 20, shows that the amount of cotton ginned from the crop of 1906-07, in running bales and including linters, aggregated 13,290,000 bales. This compares with 10,697,013 bales in 1905-06 and 13,697,310 bales in 1904-05. The ginning report by states follows:

	1906-07	1905-06	1904-05
Alabama	1,264,572	1,245,685	1,471,170
Arkansas	913,947	615,337	916,945
Florida	62,832	83,180	89,002
Georgia	1,663,456	1,759,083	1,992,757
Indian Territory	404,905	347,518	469,519
Kansas	....	15	14
Kentucky	3,424	2,578	2,614
Louisiana	978,474	523,871	1,107,271
Mississippi	1,534,262	1,198,568	1,808,617
Missouri	53,790	41,612	50,766
North Carolina	624,423	664,934	758,846
Oklahoma	474,871	328,044	342,033
South Carolina	928,643	1,100,837	1,208,180
Tennessee	304,383	278,364	329,627
Texas	4,063,901	2,490,128	3,132,503
Virginia	14,629	16,259	17,446
Total, United States	13,290,677	10,697,013	13,697,310

The average gross weight of the bales so far ginned is 510.7 pounds, which, reduced to bales of 500 pounds net—a measure that is of value chiefly for statistical purposes—results in a crop of 13,576,225 bales, a total slightly over 1,000,000 bales in excess of the estimate of the Agricultural Department last fall, which was 12,546,000 bales of 500 pounds net. Included in the above total are 321,160 bales of linters, 57,352 bales of sea-island cotton, and an estimate of 155,704 bales remaining to be ginned after March 10. The number of active ginneries was given as 28,702. Deducting the linters, which are certainly not spinnable, there seems to be a crop here indicated of about 13,000,000 bales of average weight. Perhaps the most notable feature brought out by the record of the gins during the past season is the wide range of production shown. Thus, the crop of 1904-05 gained 36 per cent. over that of 1903-04, while the crop of 1905-06 fell off 21 per cent. from the bumper year, and now the 1906-07 crop has gained 24 per cent. over the preceding year. This to some extent displays power on the part of producers to regulate acreage and consequently production, but in the main illustrates the effect of varying seasons upon the output of the south's great staple.

There appears to be a disposition on the part of some of the larger railways to readjust rates for freight traffic to the current increased cost of material, labor and the other elements which enter into the transportation of freight. That something of this kind has not already occurred is rather remarkable. Some observers, in fact, seem to think that the absence of action in this line heretofore has been in a measure due to the state of panic into which some of the financiers responsible for the leading railroads, and the operating officials of corporations of that kind, have been thrown by the investigations on the part of the Interstate Commerce Commission, and the threats of further restrictive action on the part of the national administration, state railroad commissions and the legislatures of various commonwealths. The present week brings, however, the news that both the Pennsylvania Railroad and the New York Central & Hudson River Railroad Company have made radical changes affecting free storage time for cars. Eminent railroad authorities practically versed in the details of such matters have been quoted recently to the effect that the scarcity of cars was in a large measure due to the indifference, not to say the negligence, of consignees in unloading freight consigned to them. It has, in fact, been openly stated in print that the actual employment of the freight equipment of the leading railways amounted to a little more than 10 per cent. of the year, and that the remaining 90 per cent. of the time was taken up by their being utilized, as if they were warehouses, for the commodities in which they had been transported. It is, of course, to be considered that in a great many cases the consignees of freight are debarred by physical conditions, in connection with the terminal stations and yards of the railways, from promptly unloading consignments. The reform which the Pennsylvania and New York Central roads are endeavoring to introduce involves a demurrage charge of a substantial kind where cars are not unloaded within four days, together with other charges of the same character, calculated to accelerate the movement of freight, and as a consequence to add to the efficiency of the rolling stock of the railway companies, thereby reducing the very general complaint that the freight equipment at the service of the business public is inadequate, and that the facilities which the railways afford the public fall far below what they should be.

Exports of manufactures reached their highest value and their greatest relative proportion in the year 1906, according to the Bureau of Statistics of the Department of Commerce, which reports the value of the shipments at $686,000,000, or 40 per cent. of the exports of all kinds. This is a doubling of the value of exports in ten years. It is also noted that in 1880 manufactures formed only 15 per cent. of the country's exports, while in 1890 they aggregated 21 per cent. and in 1900 35 per cent. These latter developments are, of course, in line with the country's growth in manufacturing power, and the results upon exports of other products are shown in the fact that foodstuffs exports, which in 1890, for instance, formed 42 per cent. of the total exports, had in 1906 fallen to 31 per cent. It is also shown by the Bureau of Statistics compilation that this country's gain in exports of manufactures has been relatively greater than that of some other great exporting countries. Thus, in the decade ending with 1905 exports of manufactures from this country increased 198 per cent., those of Germany 75 per cent., those of the United Kingdom 40 per cent. and those of France 25 per cent. The four greatest producers of manufactures for exportation and the value of manufactures exported by each of them in 1906 were the United Kingdom, $1,400,000,000; Germany, $1,000,000,000; the United States, $686,000,000, and France, $500,000,000.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Bankruptcy Act—"Parties in Interest."

The United States Circuit Court of Appeals for the Second Circuit held, in The Matter of Sully et al., that the term "parties in interest," as used in the bankruptcy act, means those who have an interest in the res which is to be administered and distributed in the bankruptcy proceedings, and does not include those who are merely debtors or alleged debtors of the bankrupt.

Usury—Interest—Computation.

The Supreme Court of Georgia held, in the case of Patton vs. Bank of La Fayette, that the taking of interest for a portion of the year, computed on the principle that a year consists of three hundred and sixty days, or twelve months of thirty days each, was not usurious provided the principle was resorted to in good faith as furnishing an easy and practical mode of computation and not as a cover for usury.

Libel—Newspaper—General Reference.

The Supreme Court of Michigan held, in the case of Watson vs. Detroit Journal Company, that an individual concern engaged in the trading-stamp business had no right to maintain an action for libel against one publishing an article not referring to all persons engaged in that business in the city where the article was published, but referring generally to concerns engaged in the business.

Machinery—Purchaser—Warranty.

The Supreme Court of Michigan held, in the case of Bunday vs. Columbus Machine Company, that a purchaser under a contract for the sale of machinery, which stipulates that until the price is paid the title and ownership shall remain in the vendor, cannot maintain an action for breach of warranty of quality before such payment is made on the ground that the title did not pass at the time of the installation.

Marine Insurance—Suction—Damages.

The United States District Court for the Southern District of New York held, in the case of The Western Transit Company vs. Brown, that a marine insurer is not liable to indemnify the shipowner for damages adjudged against the insured ship arising from her suction without any physical contact with another vessel, and that a decree for such damage caused by negligent navigation does not show that the insured ship came into "collision" within the meaning of the whole policy.

Federal Jurisdiction—Spanish Grant.

The Supreme Court of the United States recently dismissed for want of jurisdiction the case of Garza et al. vs. The State of Texas, which involved the title to about thirty thousand acres of land in West county, Texas. The land in dispute was part of an old Spanish grant made to Joaquin Garlas in 1804, and lying on the east bank of the Rio Grande, forty miles from Laredo. Garza and others based their claims on that concession, while the state laid claim to the tract as a part of its school land. The decision results favorably to the state.

Restraint of Trade—Conditions—Contracts.

The United States Circuit Court for the District of Massachusetts held, in the case of Dr. Miles Medical Company vs. Jaynes Drug Company, that the manufacturer of an article sold as a medicine and made under a secret process or formula of which he is the sole owner, may lawfully, by contracts with purchasers, impose such conditions as he sees fit with respect to the prices at which they shall be sold to others or the persons to whom they may be sold, and that such contracts, like similar contracts with respect to articles made under a patent or copyright, are outside the rule of restraint of trade, whether at common law or under the Federal Anti-Trust Statute.

Army Pay—Active Operations.

An act of Congress of April, 1898, provides that "in time of war every officer serving with troops operating against the enemy who shall exercise under assignment in orders issued by competent authority a command above that pertaining to his grade, shall be entitled to receive the pay and allowances of the grade appropriated to the command so exercised." In the case of The United States vs. Mitchell, just decided by the Supreme Court of the United States, a claim for extra pay under the statute was made by Mitchell, a second lieutenant of a volunteer cavalry troop, who was designated by the quartermaster of the regiment, of which the troop formed a part, to take command of the troop while it was stationed at Huntsville, Ala. The Supreme Court, reversing a judgment of the Court of Claims, held that the claimant was only entitled to a second lieutenant's pay. The court held that the order designating Mitchell to take command of the troop could not be considered an assignment in orders issued by competent authority, and said that the section was not enacted to give increased pay for ordinary duty of the service, but to give compensation for the greater risk and responsibility of active military command.

Administrator—Selling Stocks.

Section 4704 of the Kentucky Statutes provides that "no administrator or executor shall sell any dividend-paying stocks, bonds or other security which the decedent owned at his death until so ordered by a court of general equity jurisdiction" in the county of his qualification. The Kentucky Court of Appeals held, in the case of Chappell et al. vs. Chappell et al., that this provision does not refer to stocks upon which dividends may be paid but to those that are actually earning dividends, but by necessary implication it authorizes him to sell stocks that are not dividend-paying, and thus recognizes such stocks as personal property which the administrator has authority to sell without an order from any court.

Check—Certification—Release of Indorser.

In the recent case of First National Bank vs. Currie et al., the Supreme Court of Michigan held that the certification of a check at plaintiff's request was equivalent to payment and operated to release the indorser; that certification of a check on presentation by the indorsee, though there are no funds, is equivalent to payment both as to the maker and indorser; that the holder of a check who obtains a certification has elected to accept the obligation of the bank instead of cash, and that so far as the drawer is concerned the check is paid, because the holder by securing certification obtained what he desired as payment. It was also held that the rule that an indorser may waive the laches or lack of formalities on the part of the holder of commercial paper cannot be invoked where the maker and indorser have been discharged by a payment of the obligation upon which they were liable.

Check—Gift Causa Mortis.

The Supreme Court of Minnesota held, in the case of Varley vs. Sims, that a check on a bank for the entire amount of the drawer's credit therein delivered to a person as a gift of the money, though unaccepted by the bank, operates as an assignment of the fund; that if so delivered and intended by the donor in anticipation of death from an impending peril from which he subsequently dies, it is valid as a gift causa mortis; and that the delivery of a check as a gift causa mortis to a person other than the donee but for his use and benefit, and with instructions to deliver the same to the donee, is a sufficient delivery to pass title though it does not reach the hands of the donee until after the donor's death. The court further held that it is unnecessary that the check disclose on its face that it covers the entire bank credit, but that that fact may be shown dehors the instrument, and that the person to whom the delivery is made is presumed in the absence of a contrary showing to be the trustee of the donee.

Insurance—Agent's Authority—Estoppel.

The Kentucky Court of Appeals held, in the case of Crawford's Adm'r vs. Travelers' Insurance Company of Hartford, Conn., that an insurance company is liable for the acts of its agent while acting in the apparent scope of his authority; that the knowledge of the agent is imputed to the company respecting any fact material to the risk, and that the company is estopped from setting it up in defense unless the party dealing with the agent knew that the agent had limited power, and that he was exceeding the power conferred upon him by his principal. In the case before the court it appeared that an agent of a life-insurance company sold a ticket to an applicant over sixty-five years of age for an accident policy on his life for twenty-four hours, and that the purchaser was killed by accident within the twenty-four hours. The court held that the company was liable for the amount of the insurance named therein provided the agent knew that the purchaser was over sixty-five years of age, and that the purchaser did not know that the policy contained a clause making it void as to persons under eighteen and over sixty-five years of age, which facts should have been submitted to the jury.

BUSINESS NOTES.

Output of United States Steel Corporation.

Production of the United States Steel Corporation in 1906 compared with other years (in tons):

	1906	1905	1904	1903
Iron ore mined	20,645,148	18,486,556	10,503,087	15,363,355
Coke manufactured	13,295,075	12,242,909	8,652,293	8,658,391

Our Trade with Japan.

According to the returns of the Bureau of Statistics at Washington, the trade of the United States with Japan during the calendar years 1905 and 1906 was as follows: Imports, $50,703,377 and $64,791,485 respectively, an increase in 1906 of $14,088,100; exports, $55,757,868 and $34,405,978 respectively, a decrease in 1906 of $21,351,890. Of the increase in the imports from Japan, that in raw silk amounted to nearly $11,000,000 in the total increase of $14,088,100. This bears testimony to the activity of the silk industry in the United States. The other imports in which increases occurred were copper bars and ingots, tea, china and porcelain, etc. The copper imports amounted to $1,146,276, against nothing in 1905. The largest decrease in exports to Japan in 1906 occurred in raw cotton, $4,450,976. Although the exports of cotton to Japan in 1906 were less than in 1905, they were more than double those of 1904. Full details of the trade with Japan for the calendar year 1906 are not available, but the following statement shows the exports of the principal articles thereto for that year compared with 1905:

	1905	1906
Canned beef	$1,318,623	$15,627
Railway carriages and cycles	1,093,338	531,057
Clocks and watches	265,125	471,353
Cotton, raw	15,534,773	11,083,797
Cotton piece goods	848,322	72,573
Electric machinery	1,239,878	960,146
Flour	6,014,843	3,390,623
Builders' hardware	253,872	294,155
Scientific instruments	277,962	425,672
Locomotives	3,023,673	950,628

Paper and paper manufactures	496,538	991,234
Paraffin and paraffin wax	504,298	481,091
Sole leather	3,406,774	482,906
Steel rails	305,883	722,245
Tobacco, leaf	962,180	629,427
All other articles	16,116,313	8,447,233
Total	55,575,868	34,405,978

Revival in Mississippi River Trade.

According to reports from St. Louis, a revival of the busy days of steamboating on the Mississippi and its tributaries is looked for as the result of the passage of the rate law and the agitation of business men and farmers for more facilities for moving goods and crops. There is much talk among men interested in the steamboating that has survived of plans to provide more facilities. The decline of the steamboat business on the Mississippi and its tributaries began in 1872, when the railroads started their inroads into the trade that had been controlled by the river craft. Traffic on the Mississippi had revived after the war and was at the highest point from 1868 to 1872. From that year the decline was gradual until about 1885. Traffic on the Missouri, however, was the first to be affected, owing to the earlier extension of railroads into that territory. Only three boats were plying between St. Louis and Kansas City in 1885, and none from St. Louis to points above Kansas City. Some small boats were plying in "short trades" on the Missouri as far up as Bismarck, N. D. For the last fifteen years traffic on the Missouri has been practically abandoned, so far as direct connection with St. Louis is concerned. Efforts are being made to revive this industry. A syndicate of Kansas City merchants has announced that it is ready to organize a company to establish a line of boats between Kansas City and St. Louis. A Nashville (Tenn.) steamboat company will run one or two boats on the Missouri from St. Louis to Miami, 250 miles up the river. Large quantities of grain were carried in barges from St. Louis to New Orleans for export from 1869 to about 1899. Low railroad rates to the seaboard and low-water troubles in the Mississippi in 1899 caused this branch of transportation to be abandoned. Figures given by the St. Louis Merchants' Exchange relative to the river traffic of the last twenty years are as follows:

	1887	1906
Boats arriving	2,361	1,020
Barges arriving	1,272	417
Tons of freight received	652,880	325,900
Tons of lumber and logs by rafts	213,165	1,770
Tons of freight shipped out	637,606	80,185

Increased Cost of Railway Materials.

The *Wall Street Journal* has been supplied by the president of one of the largest railroads in the west with data which clearly show why the railroads of the country are losing ground so far as net earnings go when gross earnings continue to show increases. These figures give the prices paid by this road in 1897 for various kinds of material and also the prices for the same materials this year, together with the increase in each case. The figures follow:

	1897	1907	*P. cent. inc.*
Plate girder	1.86	3.05	63.9
Castings iron	1.35	2.12½	57.4
Coal engine	1.33	1.65	24.1
Gasoline, 72	.0875	.15	71.4
Iron bar	1.15	1.76	53.5
Market	1.00	2.00	100
Iron, No. 1 northern pig	10.50	24.00	128
Locomotives, passenger	9250.00	17975.00	94.3
Locomotives, freight	9250.00	16775.00	81.4
Oak car	18.50	26.00	40.6
Oak tracks	15.50	24.00	54.8
Pine, 2x10x16'	10.50	28.50	171.4
Pine fencing	13.50	30.00	122.2
Pine bridge string	15.50	52.50	109.7
Pine bridge ties	11.75	28.50	142.5
Pine bridge caps	14.00	27.50	96.4
Pine car siding	23.00	42.00	82.6
Pipe cast	20.50	33.50	63.4
Rails	18.00	28.00	55.5
Spikes	1.60	1.90	18.8
Market	1.60	2.80	75
Steel shell	2.75	1.76½	*55.8
Steel fire box	2.75	2.90	.054
Steel tank	1.30	1.86½	43.8
Steel bar	1.05	2.00	90.50
Ties, cedar	.30	.55	83.3
Ties, oak	.40	.66	65
Tubes, two locomotive	.13	.14	.077
Wheels, car	5.85	8.95	53

* Decrease.

The biggest increase has been in the cost of lumber—fully 75 per cent.

State Banks of New York.

The abstract of the returns of the ninety-two state banks in New York state at the close of business February 26 was made public by Banking Superintendent Keep Tuesday. Loans show a small increase compared with the November returns; cash and deposits show rather large decrease. Changes shown in important items, compared with the returns of a year ago, are as follows:

	Increase
Loans and discounts	$26,203,141
Due from trust companies, etc	3,256,462
Stocks and bonds	2,498,283
Demand deposits	8,424,961
Due trust companies, etc	5,828,423
Specie	8,462,876
Legal tenders	1,597,731
Cash items	*21,249,427
Total cash	*11,188,820

* Decrease.

Following is a comparative statement of the items contained in the summary as of February 26, 1907, as compared with November 14, 1906, and February 20, 1906:

Resources—	*Feb.* 26, '07	*Nov.* 14, '06	*Feb.* 20, '06
Loans and discounts	$315,928,493	$314,647,878	$289,615,352
Liabilities of directors	9,679,466	9,371,277	8,435,016
Overdrafts	427,877	445,701	418,853
Due from trust companies, banks, etc	45,591,551	47,156,059	42,335,089
Real estate	13,475,945	13,267,614	13,046,015
Mortgages owned	6,974,904	7,020,951	5,737,082
Stocks and bonds	37,775,508	37,325,419	35,277,315
Specie	42,339,489	38,166,787	33,876,613
Legal tenders	22,942,617	23,038,047	21,344,886
Cash items	63,670,255	76,067,538	84,919,682
Other assets	1,422,894	1,478,120	1,307,996
Total	560,208,089	567,986,011	536,813,899
Liabilities—			
Capital	34,353,000	32,918,000	30,560,700
Surplus fund	30,521,204	29,457,969	25,709,517
Undivided profits	12,904,120	14,130,826	12,605,082
Demand deposits	411,369,609	421,982,786	402,944,648

Deposits, preferred	450,000	325,000	50,000
Other liabilities	629,849	1,157,573	1,049,176
Total	560,208,089	567,986,011	536,813,899

CURRENT BUSINESS NEWS.

Commercial.

Last week the Italian Chamber of Deputies passed the bill approving the reduction of the duty on petroleum, benzine, etc., from $9.60 to $4.80. This measure will work largely to the advantage of the United States, which sends into Italy more than two-thirds of the petroleum used in the country. The increase in automobiling in Italy has done much to augment the consumption of this product.

Recently a southern exchange referred to an experiment that had been made in Perry county, Alabama, in cultivating Cuban tobacco. According to the reports, the experiments proved to be of a satisfactory character. Now comes a writer in the Chattanooga *Tradesman* with the statement that there cannot be the least doubt regarding the raising of Cuban tobacco in southeastern Alabama.

An appreciable advance in the prices of British commodities was recorded during February, bringing the average level to a higher point than ever before. The London *Economist's* index number, which shows the average effect of the movements in a number of principal commodities, has risen to 2521, which compares with 2494 at the end of January last, and 2501 at the end of November, 1906, the latter being the previous highest number. The variations in each month since June, 1906, and at intervals since the end of the year 1902 are shown below:

End of	*Index No.*	*End of*	*Index No.*
February, 1907	2521	June, 1906	2362
January, 1907	2494	March, 1906	2306
December, 1906	2499	December, 1905	2342
November, 1906	2501	June, 1905	2163
October, 1906	2458	December, 1904	2136
September, 1906	2355	June, 1904	2130
August, 1906	2341	December, 1903	2197
July, 1906	2329	December, 1902	2003

BRADSTREET'S figures show that the trend of prices in this country is similar to that experienced oversea.

Broomhall, reporting on foreign crop conditions, on Tuesday said: United Kingdom—The outlook for the crop continues satisfactory, the weather being seasonable. France—Earlier reports are confirmed that wheat has wintered satisfactorily. The weather is favorable for spring sowing, and supplies are sufficient for present requirements. Germany—A fair amount of damage is confirmed, as predicted in the states of Mecklenburg and Saxony, as a result of winter-killing, and it is believed that part of this area is being resown to oats. Supplies of wheat are very scarce and dearer. Hungary—The weather is unsettled, and some reports of damage are being received. Roumania—A very heavy snowstorm is reported. Stocks of wheat at the port of Sulina are about exhausted, and it is expected that the shipments will be light during the next month. Russia—The general outlook for crops is favorable, except in the southwest, where occasional complaints are heard, and some fears are expressed for the rye crop in the east. Offerings are rather freer. Bulgaria, Italy and North Africa—The crop outlook is generally favorable. Spain—There is no improvement in the crop outlook, the weather, according to our last report, being droughty.

Reports from the maple-sugar sections of Vermont say that the pure-food laws recently passed have practically killed the competition of dealers manufacturing adulterated or imitation maple sugar and syrup, and already buyers from New York and Boston and other large cities are offering 12 and 13 cents a pound for sugar. Most of the producers are holding off from these prices, although last year they accepted 11 cents a pound. Buyers are also trying to get syrup at from 80 to 90 cents a gallon, storage provided by the buyer, although last year's price was 60 cents a gallon, storage not added.

Reports from all parts of Kansas say the new wheat crop is in prime condition and that another 100,000,000-bushel yield may be expected. Already wheat growers are writing to State Employment Agent Gerow asking him to get in touch with 10,000 extra men for the harvest.

There is a shortage of Jamaica rum, for which the recent catastrophe at Jamaica is responsible, says a consular report. Therefore prices are higher, but as the sugar plantations of the island were not seriously damaged, it is expected that normal conditions will set in before long.

R. M. Miller, Jr., president of the Cotton Manufacturers' Association of North Carolina, declares in a letter to the *Journal of Commerce* that the south wants immigrants of a desirable class, the kind that will be best suited to the climatic conditions. Mr. Miller asserts that the shortage of labor in the south is not confined to the cotton-manufacturing industry, but every industry and every avenue of trade is feeling its effects—the factory, the farm, the workshop, all need more labor. Given the necessary labor, the possibilities of the south are unlimited, its progress along all lines will broaden and expand until in a few years, if the world's consumption demands of us 20,000,000 bales of American cotton, then, at a fair and reasonable price, the south will produce it, and more as the world wants it.

The following are Sauerbeck's index numbers of the prices of forty-five commodities, the average of the eleven years 1867-77 being 100:

	Average		*Monthly numbers*
1878-87	79	December, 1889	73.7
1887-96	68	February, 1895	60.0
1890-99	66	July, 1896	59.2
1897-1906	70	July, 1900	76.2
1883	82	December, 1901	68.4
1886	61	December, 1905	74.9
1900	75	February, 1906	75.0
1901	70	March, 1906	75.7
1902	69	June, 1906	76.9
1903	69	September, 1906	77.5
1904	70	December, 1906	79.7
1905	72	January, 1907	80.0
1906	77	February, 1907	80.7

Taking articles of food and materials separately, the index numbers compare thus (1867-77—100):

	Food	*Mat'ls*
1878-87, average	84.0	76.0
1887-96, average	70.0	66.0
1897-1906, average	67.0	72.0
February, 1895	63.8	57.0
July, 1906	60.0	58.6
February, 1900	65.8	81.9
July, 1900	71.2	79.8
December, 1906	68.4	87.9
January, 1907	69.2	88.0
February, 1907	69.5	88.9

In the year ending March 1 the value of Kansas's poultry and eggs sold was $8,520,153, or considerably more than the entire value of the rye, barley, buckwheat, castor beans, cotton, hemp, tobacco, broom corn, milo, maize, Jerusalem corn, garden and horticultural products marketed, honey, beeswax, sheep and wool of the same year. No field crops, with the exception of wheat, corn and hay, equaled in value the surplus sold from the Kansas hens, ducks, turkeys and geese.

Shoe manufacturers in the large centers of that industry in New England are seriously concerned at the devastation of New England forests as affecting their supply of boxwood. The supply of this lumber has been steadily decreasing and, with the constantly increasing demand for the material, prices have gone up rapidly. The census of last year showed that throughout the country $57,000,000 worth of packing cases were made in 1905, double the value manufactured in 1895. Gifford Pinchot, government forester, estimates that New England uses 600,000,000 feet of lumber annually to provide cases for the shoemakers and other large users of packing cases. White pine is the most valuable timber for packing cases, but the supply is very scarce now. As important to the manufacturers as the boxboard industry is the carton and paper-box industry. Prices of all kinds of newsboard and strawboard of which cartons are made have increased by 20 per cent. in the past year. Shoe manufacturers particularly feel this condition, as every pair of shoes has its carton, but with the great demand for candy, breakfast foods and other "specialties" in sealed boxes, the demand has exceeded the supply of material.

The Upper House of the Danish Diet on Tuesday passed a bill carrying the adoption of the metric system of measurements in Denmark.

Beerbohm says: "With the probability of crop scares shortly in America, Germany and probably in France, one can hardly feel despondent about the future of wheat."

The Standard Oil Company on Wednesday announced an advance of 20 points in refined petroleum in barrels to 8.20 at New York and 8.15 at Philadelphia. The price of oil in bulk was not changed.

Great embarrassment is being experienced by the Post Office Department because of its inability to obtain twine in sufficient quantities to fill orders from postmasters. The twine is used in tying letters into packages after they are arranged for dispatch. Numerous telegrams and letters of complaint are received daily because requisitions are not filled immediately.

The Chinese boycott against Americans has been effectively suppressed, according to mail advices received Thursday from the American consul-general at Canton. No meetings for boycott agitation have been held since January 8, and the word "boycott" has not appeared a single time in the native press. Public agitation of the movement, the consul-general believes, can safely be considered at an end.

The Egyptian Council of Ministers has adopted the proposal to raise the Assouan dam. The extra supply of water thus obtained will be sufficient to irrigate 1,000,000 acres of land. About 950,000 acres, mainly government property, which is now untilled because there is no water for the purpose, will be brought under cultivation. It is estimated that the annual increase in the value of the cotton output will be nearly $20,000,000. The work will be completed in 1913.

At the fur sales which opened in London Monday, the extreme high prices which prevailed in 1905 were maintained, with the exception of those for Russian sable and ermine, which declined 25 per cent. Mink advanced 50 per cent., owing to the supply being practically cornered in America. English and continental buyers have been obliged to obtain what they needed at any price.

According to an English financial newspaper the position of Highland malt whiskey is the reverse of prosperous. In a word, what that branch of the industry is suffering from is over-production. There are too many distilleries, and for years far too much whiskey has been made. The stocks are prodigious, and the congestion has been accentuated by the serious failing off that has taken place in the consumption.

Financial.

On Monday, City Comptroller Player, of St. Louis, announced that the attempt of the city to sell $3,000,000 3.65 per cent. semi-annual twenty-year various improvement bonds had failed. The proposals for the bonds were opened at noon, and it was found that the bids were too low. Mr. Player stated that bankers evidently were holding out for 4 per cent. bonds, but that the city would not sell securities at that figure.

On Tuesday the Corn Products Company declared the regular quarterly dividend of 1 per cent. and 3 per cent. extra on the $28,238,000 7 per cent. cumulative preferred stock, the extra 3 per cent. representing back dividends.

Failing to get satisfactory bids for its 3½ per cent. bonds, which were offered Tuesday, the city of Philadelphia withdrew its offer.

Two New York Produce Exhange memberships were sold at auction Wednesday. One was a participating seat and went for $310, a drop of about $100 as compared with the previous sale. The other was a non-participating membership and was sold for $535.

The production of gold in Colorado in 1906 decreased nearly $3,000,000, according to the statistics of the Bureau of Mines. The value of the various metals was: Gold, $22,588,734, compared with $25,577,946 in 1905; silver, $8,499,743, compared with $7,743,718 in 1905; lead, $5,666,993, against $5,438,506 in 1905; copper, $1,844,002, against $1,536,266 in 1905; zinc, $5,298,602, against $4,774,497 in 1905; total production of metals, $43,898,075, against $45,070,935 in the previous year. The gold output of the Cripple Creek district fell off $1,701,000.

The Liverpool Cotton Exchange will be closed March 29 and 30 and April 1.

On Thursday the rate of discount of the Bank of France was raised from 3 to 3½ per cent. This is the first change that has taken place in the French bank rate in seven years. During the Boer war the rate for a short time was maintained at 4½ per cent. The last previous change in the rate was on May 25, 1900, when it was reduced from 3½ to 3 per cent., the rate maintained up to Thursday.

Considering the remarkable changes in the method of insurance forced upon the life companies by the new law of New York, and the agitation waged against the companies in other states, the 127 corporations whose returns for 1906 have been compiled make a fair showing. In the current issue of the *Spectator* it is pointed out that premium income has increased $10,072,183 during the year, in spite of the fact the new business written last year, exclusive of industrial policies, was the smallest of any year since 1901. This item stands at $1,518,853,603 for 1906, showing a falling off in "new ordinary business" secured last year of $237,396,520, and in "new industrial business," $30,602,278. The totals for premiums received, income and new business, including revivals (exclusive of the industrial business), for the last five years, may be thus summarized:

	Premiums received	*Total income*	*New business incl. revivals*
1906	$526,058,845	$665,907,789	$1,518,853,603
1905	515,996,662	641,762,151	1,756,250,123
1904	488,293,714	599,029,250	1,839,999,496

BOSTON CHICAGO BALTIMORE

Railroads.

In an interview with the *Wall Street Journal*, Mr. E. H. Harriman says retrenchment rumors are humorous, and that neither the Union Pacific nor the Southern Pacific is abandoning any of the work it has in hand.

All the Erie Railroad's new construction work that has been under way in New York State in the past year will be stopped until further notice, according to an official statement issued from the company's offices. The principal reason given for the action is that "within the past two weeks it has been found that there is a likelihood of the policy of the State of New York being entirely reversed with respect to the control of subsidiary corporations, and also that other burdensome legislation is proposed." The decision will cause a cessation of work on the line known as the Genesee River Railroad, now being constructed between Cuba on the main line to Hunt's on the Buffalo division; the low-grade line known as the Erie & Jersey Railroad Company, between Port Jervis and Newburgh Junction, and a terminal in New York City. Work will be continued on the Bergen tunnel cut, terminal improvements in Jersey City, the Columbus & Erie Railroad in Warren county, Pennsylvania, and various smaller contracts in Ohio and New Jersey, now nearing completion. The projects affected would have represented an expenditure of perhaps $15,000,000 to $20,000,000.

"The outlook for railway building in the United States is not so promising as it was a year ago," says the *Railway Age*. "There is as large a mileage projected as there was in March, 1906, but the conditions are not so favorable. A year ago over 13,000 miles of new railroad were under contract, nearly one-half of which was completed before the close of the year—a larger mileage than has been built in any other single year since 1888. There is almost as large a mileage under contract to-day, and, while there will be great activity during 1907 in pushing to completion new lines on which the work of construction already is well advanced and financial arrangements for which have been made, the launching of new projects, for which the capital must be provided, in many instances has been postponed until conditions improve."

Industrial.

According to a statement issued by the Geological Survey, the total production of hydraulic cement in the United States in 1906 was 50,027,321 barrels, valued at $54,010,713. This represents an increase in both production and value of cement over the preceding year, the increase in production being 9,133,013 barrels and in value $18,003,524. Of the total amount manufactured in the United States in 1906, 45,610,822 barrels were Portland cement, with a value of $51,240,652; natural rock cement, 3,935,275 barrels, valued at $2,362,140, and 481,204 barrels of puzzolan cement, valued at $412,921.

It is reported that work on the construction of the Topeka & Northwestern Railroad has been stopped by orders from Union Pacific headquarters, and, as a result, thousands of men have been thrown out of employment.

The Geological Survey of Canada places the production of copper in Canada for 1906 at 57,029,231 pounds, of a value of $10,994,095. Of this production 79 per cent. was contributed by British Columbia, while Ontario, largely from the Sudbury district, contributed 18.5 per cent.

Miscellaneous.

The total immigration into the United States in February, 1907, was 65,541, as against 68,969 in February, 1906, a decrease of 3,155. The following table shows the countries from which the greater number came:

	1907	1906	*Changes*
Austria	8,123	7,081	Inc. 142
England	2,592	2,580	Inc. 12
Hungary	15,058	15,775	Dec. 717
German empire	1,750	1,932	Dec. 182
Italy	12,903	14,451	Dec. 1,548
Russia and Finland	12,429	13,410	Dec. 981
Japan	3,389	1,294	Inc. 2,095

The total from Europe was 59,225 in February, 1907, as compared with 62,197 in the same month of 1906. Asiatics numbered 3,773, as against 1,524 last year, an increase of 2,249. Of the total 50,924 came through the port of New York.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Spring trade is at its height, and the turnover bids fair to exceed even last year's, the stimuli being furnished by more favorable weather, the approach of Easter, and the visits of country merchants to the larger centers. Improvement is reflected all around, even in the northwest, which now appears to be getting back to normal conditions, although collections are still backward in North Dakota. In fact, doubt as to the future is nowhere in evidence in the great producing sections of the country. At some points in the west sales of dry goods on spring account are fully 10 per cent. above those of last year, while fall business thus far placed is also in excess of that booked at this time in 1906. Retail business has opened up well, and stocks in general are not burdensome. Collections, while not good, tend to improve in parts of the country, the southwest being conspicuous in this respect, owing to the fact that country merchants are discounting bills. While the car situation in the west has improved, conditions in the east are worse, but nevertheless a greater movement of cereals to market may now be expected. Railway gross earnings continue exceptionally heavy, taking into account the large gains reported a year ago, when prosperity seemed to be at flood tide. General crop conditions are favorable, winter wheat being in good condition west of the Mississippi river, and, excluding Texas, it is thought that the green bug has wrought little damage. However, in the Ohio valley and Indiana some of the plant has been winter-killed. Soil conditions for cotton planting in the south are excellent and a largely increased acreage is looked for. Money continues comparatively scarce, with rates high.

Bank clearings show marked expansion, heavy gains over last week and last year being scored, due chiefly to more active stock-market operations. Pig iron shows a little more life, and the undertone of the market continues strong, despite the wishes of consumers. Contracting, however, for certain forms for distant delivery is not marked. Manufacturing in general is active, and some lines refuse to book any more orders for spring shipment. At the same time the situation is not without its cross currents, some of which probably flow from the lower prices recently witnessed in the stock market and difficulty in procuring money at reasonable rates. It is reported that some railroads intend to abandon work on new construction or betterments, but the business community appears to be but slightly disturbed by these announcements, feeling that the work must be done sooner or later. Labor troubles are somewhat more in evidence, though the disturbances are localized. Eastern dealers in wool appear more inclined to dispose of stocks in the belief that prices are high, and there is some hesitancy in placing orders for cotton goods for far-distant delivery, but the mills are undisturbed, as they are heavily sold up. Orders for fall footwear at the east are likewise backward, and copper is not so strong as heretofore.

Somewhat more activity is displayed in foundry pig iron for future delivery, and now and then demand for spot supplies becomes urgent, when premiums are obtained. In the south, where the bulk of the business has been placed, prices have stiffened. While the floods in the Pittsburgh district caused only a temporary stoppage of work in the steel and iron industry, the effects thereof were sufficient to retard production. Two significant sales of Bessemer pig iron were made within the week, one of 36,000 tons calling for deliveries in April, May and June, prices to be adjusted monthly, and the other of 9,000 tons to the leading interest at $22, at valley furnaces, delivery to be in April. Demand for basic pig is not active, as eastern makers are covered for the second quarter and appear indisposed to do business for the second half, chiefly because they cannot readily sell steel billets on a satisfactory price basis. Demand for finished lines continues good, and San Francisco has figured to the extent of 1,500 tons in the contracts placed for structural material. New business in steel rails is light. Coke is easier. Copper is not so strong as heretofore.

The great surplus-producing winter-wheat states are west of the Mississippi river, and from these reports to BRADSTREET'S are without a flaw, the word excellent being the description used. Green-bug damage is minimized. East of the river it is still too early to speak with certainty. In Indiana heavy rains have hurt the crop on lowlands. In Ohio the crop shows evidence of winter-killing, but the damage is reported not so serious as earlier feared. Late frosts have hurt California fruits. At the south the truck and fruit crops are in excellent shape. Preparations for a record acreage in cotton are going on and the ground conditions are favorable, except that rain is needed in Florida and Texas. Corn planting has begun. Rice in Louisiana is largely planted and in some sections shows considerable growth. Sugar cane is a foot high in some places and is sprouting well. Preparations are now making to chop it out.

Staples dealt in speculatively have in the main sympathized with the course of the securities markets, easing and strengthening in turn as the latter markets receded or hardened. Aside from the strengthening of coarse grains and the easing of cotton and provisions, changes have been slight. Wheat fell off early on liquidation, on which record low prices of the season were touched at Chicago, which feels the influence of large local stocks and expected heavy receipts when car congestion permits. At New York bullish statistics and small supplies limited recessions. Later there was a hardening all around on which most early losses were regained, and net changes were slight. Corn and oats are respectively 1 and 2 cents higher on the week, light stocks and good demand being features. Provisions are lower, pork being off 25 cents and lard 50 points. Cotton-seed oil eased 1 cent.

The features in foreign trade are the gains shown in exports of cotton, which is at present the sheet anchor of foreign trade, and in exports of manufactures. Breadstuffs and provisions exports show decreases. Imports are gaining in greater degree than are exports, though the excess in favor of the latter is still heavy. Money is still in active demand, with rates high, and troubled foreign markets preclude large imports of gold due this country on balance. Prices show considerable strength, though easing in cotton and provisions is noted. Coarse grains are strong and higher, but wheat, while fairly strong, is irregular, and the flour industry is dull.

Wool is quiet, and less tendency to contract for new clips is shown by dealers. The strength of foreign markets is the sustaining feature at Boston. A large sale of foreign low crossbred wool is noted at Boston, which has been on hand a year, and shows little profit on carrying charges, etc. Little is doing in the west. In the goods markets new business does not come forward so rapidly, though a good sample business has been done in men's-wear goods.

Cotton reacted slowly early in the week, large receipts and selling by timid longs, reflecting stock-market uncertainties, being a feature. By Tuesday night futures were 30 points and spots 25 points off. The ginning report, showing 13,290,000 bales ginned for the year, was not regarded as bearish, and more confident buying by bulls, despite large receipts, regained some of the early loss, but spots lose 15 points on the week, and futures are 10 to 12 points off.

The shoe and leather trades report air activity. Shoe shipments for last week were slightly larger than a year ago. New business in shoes is quiet and shipments for the year are 6.5 per cent. behind a year ago. Sales of sole leather are moderate; hemlock and union are relatively most active, while oak sole is quiet. Grain leather has improved and manufacturers are reported covering fall requirements. Domestic hides are quiet, tanners demanding concessions and willing to see lower prices.

At the east coal stocks, which had been accumulated to provide against possible labor troubles and consequent difficulty of getting supplies, are becoming exhausted. Dealers in anthracite are withholding orders in anticipation of the customary spring reduction in price, and an improved demand is looked for. Stocks are also short in bituminous coal, and prices are stronger. Prospects for a good season's trade are encouraging. At the west bituminous coal is weaker on large offerings of demurrage stocks.

Bank clearings for the week ending March 21 aggregate $3,835,747,000, 18 per cent. over last week and 37 per cent. above the same week last year. The foregoing establishes a new high record, and is explained in large part by the activity displayed in the stock market at the metropolis. Outside of New York exchange amounts to $1,188,830,000, 3 per cent. in excess of last week, but 19 per cent. over the corresponding week last year.

Business failures for the week ending March 21 number 157, against 186 last week, 170 in the like week of 1906, 204 in 1905, 215 in 1904 and 175 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending March 21 aggregated 1,878,614 bushels, against 2,080,034 bushels last week, 2,293,012 bushels this week last year, 1,044,595 bushels in 1905 and 4,326,304 bushels in 1902. For the past thirty-eight weeks of the fiscal year the exports are 127,883,479 bushels, against 101,445,904 bushels in 1905-06, 46,643,709 bushels in 1904-05 and 192,758,142 bushels in 1901-02. Corn exports for the week are 2,508,786 bushels, against 1,998,254 bushels last week, 3,173,826 bushels a year ago and 2,976,836 bushels in 1905. For the fiscal year to date the exports are 49,822,223 bushels, against 92,226,271 bushels in 1905-06 and 54,948,184 bushels in 1904-05.

IN CANADA.

Wholesale trade is brisk in Canada, but collections are complained of. This is partly due, no doubt, to bad roads affecting retail distribution in the country districts. Cotton goods are higher, millinery openings have been largely attended, and building will be very active. Car blockades in the west are reported at an end, and Winnipeg is receiving large quantities of grain of excellent quality. The near approach of the opening of navigation is expected to help Montreal trade. Building materials are active and higher at Toronto, where complaint is general of manufacturers of all kinds of goods being behind on orders. Trade is brisk in British Columbia, the lumber industry is booming, and labor is scarce. Failures for the week number 32, as against 23 last week and 29 in this week a year ago. Clearings for the week aggregate $86,238,000, a gain of 10.6 per cent. over last week and of 32.5 per cent. over this week a year ago.

EARLY CROP REPORTS.

OMAHA.—The condition of winter wheat is excellent.

CINCINNATI.—Winter wheat in this section of the Ohio valley shows in many places evidences of being partly winter-killed. Authorities consulted express the belief that the damage is not so severe as was at first reported.

CHICAGO.—Hot weather in the southwest is said to have destroyed many green bugs, but it is too early to make definite calculations as to the winter-wheat crop anywhere.

ST. LOUIS.—Winter wheat is apparently in better condition than last week, and the green bug, which created some excitement, seems to have wrought no damage of consequence.

KANSAS CITY.—Growing wheat is in excellent condition.

INDIANAPOLIS.—It is thought that the wheat crop, especially in the lowlands of Indiana, was seriously affected by recent rains.

ST. JOSEPH.—The winter-wheat acreage is slightly above normal. The condition of the crop in this district is excellent.

SPOKANE.—Farmers report conditions favorable to a large yield of winter wheat.

SAN FRANCISCO.—Late frosts have injured apricots and almonds, and heavy rains have done great damage.

NEW ORLEANS.—Cotton growers are commencing to plant. The rice crop is largely planted, and some sections report it already showing considerable growth. Sugar cane is a foot high in some quarters, and in all sections it is sprouting well, and preparations are making to chop it out. The acreage of these staples will be largely increased.

LITTLE ROCK.—Prospects for a good fruit crop are excellent. Perfect weather helps cotton-crop preparations, and the outlook is encouraging.

CHARLESTON.—Farmers are actively engaged in preparing the soil, and heavy shipments of fertilizers still continue. Truck is in good condition, especially cabbages, which are being shipped in large quantities.

MONTGOMERY.—Favorable weather has enabled planters to put ground in good condition, and the cotton-crop outlook is very satisfactory.

WACO.—Rain would be of much benefit.

MEMPHIS.—Farmers are plowing and planting corn. The cotton acreage will probably be reduced.

ATLANTA.—Weather is avorable to crop preparations.

MOBILE.—The weather is very favorable for preparations for the new cotton crop.

FORT WORTH.—Rain is badly needed.

TRADE REPORTS.

At New York demand for dry goods continues unabated, especially for cotton goods, and in some lines it is unprecedented. Prices are firm, and there is no sign of a decline in the near future. High prices limit sales of yarn for distant delivery. Dress goods and silks are also in good request, and prices of the latter are stiffening. Collections are reported good. Some sales for future delivery of raw silk are reported, manufacturers not having sufficient stock on hand to carry them through the season, but buying is not free. Hosiery, underwear and knit goods continue very active, and manufacturers of shirts and shirt waists have all the business they can handle. Mills are placing a few orders for rags and shoddy, but business is not brisk. Demand for groceries at wholesale shows a moderate decrease, tight money making buyers careful. In retail trade demand for canned goods is the feature. Manufacturing confectioners are busy, prices are firm and collections fair. Business in the wine and spirit trades is good for this month, which, with some, is the best so far this year. Collections are satisfactory, and the trade deems the outlook encouraging. Receipts of dairy produce are up to the average and equal to the demand. Butter is down 1 cent. The market is fully supplied with eggs, which are firm. Jobbers of flour are now carrying full stocks, and in consequence business is quiet. Supplies of both live stock and dressed meats are full; demand is good and prices steady. Import orders for both china and glassware have been very liberal, and trade conditions are good. Orders on hand for future delivery of tin and enameled ware will keep manufacturers busy for some time to come. Reports of the condition of the pig-iron market are conflicting. Some dealers say the demand is less, while others say they are booking orders for the third quarter of the year. Prices show little variation. Steel continues in good demand. Metals are slightly easier and collections not quite

so satisfactory. Many American manufacturers of automobiles have their output for the whole of 1907 practically under contract, and dealers say prospects favor a good year's business. Buyers of cotton duck complain of difficulty in obtaining prompt deliveries. The hide market is dull. Crude rubber shows a slight falling off in price. Wire goods are very active, prices are steadily advancing, and orders for early delivery are coming freely to hand. Lumber of all sorts is being held back by car shortage, as are also, to some extent, cement and fancy bricks. Prices are steady. Demand for paper continues steady. Collections range from fair to good.

The following telegrams show trade conditions at the cities mentioned for the week ending March 22:

BOSTON. — Some fair-sized orders for men's heavy footwear have been placed, but, as a rule, wholesalers are still holding back their stock orders. Sole leather is firm, but sales are of only fair volume. Some manufacturers report an increased inquiry for grain leathers and sales of fair amounts. Tanners are holding back on hides, making efforts to weaken prices. Calfskins are fine and pickled sheepskins are becoming scarce. Shoe shipments are showing up a little better, as compared with same weeks last year. In chemicals there is a slightly better demand for nitrate of soda. Wood and grain alcohols are moving well. The demand for drugs is of seasonable proportion. Dyes and tanning materials are in moderate call. In the lumber market the trade shows some improvement, but warmer weather is needed to stimulate a brisk demand. Higher prices are obtained for some lines of southern hardwoods, whitewood being sharply in advance. In building materials there is no material change, most lines being firm. Brick makers report many good orders ahead, which warmer weather will stimulate to completion. Paints and oils are quiet, with some advance in turpentine. In anthracite coal line business is quite active. Bituminous is in limited supply but shipments arriving, better weather conditions having materially improved. Wholesale liquor dealers report an increasing demand for rectified whiskies. Demand for beer and ale is already increasing. Collections continue rather slow. Prices on leaf tobacco are firmer and there is an increased demand for choice leaf. Cigar manufacturers are fairly busy. Large importations of Irish mackerel have been a feature in the local fish trade. Salt and smoked fish are firm in tone, with an active trade in progress.

PROVIDENCE.—In the manufacturing jewelry trade business shows a slight decrease from the level of the past six weeks. Collections in this line are slow. Cotton goods show considerable strength. Deliveries are slow. Building materials are active. The wholesale boot and shoe trade is normal for this season.

PORTLAND, ME.—Wholesale grocery, hardware and dry goods dealers are showing a gain in volume of business, and collections in general are better than for some little time past.

PHILADELPHIA.—There is little change in the textile situation; manufacturers are busy as a rule, and yarn prices are maintained. Wool is not very active, but prices are firm. Jobbers in dry goods report a fair distribution of merchandise, but weather conditions are not favorable to a large output; collections are slow. Flour is dull and weak, and the market lacks vim. Chemicals and dyestuffs are in fair demand, but business is not brisk, and collections are reported slow. Paints and glass are now beginning to move in larger volume and the market is hardening, though prices show no particular change. Lumbermen say that business is active and that indications point to higher prices, especially in hard woods, which may advance 10 to 15 per cent. when the season fairly opens. Hides and skins continue firm, with high prices. Goatskins are in plentiful supply, with easier prices. Glazed kid is firm, but less active. Wholesale and retail shoe dealers report increased business, due to the approach of the Easter season. Tobacco is dull and large buyers have sufficient goods for present needs but consider offers for future wants when prices are something less than top figures. Stocks are largely in strong hands and prices are steady; collections are slow. Iron buying for delivery in the latter part of the year is not quite so active, but there is no abatement in the demand for delivery in the near future, the market in this respect maintaining strength.

PITTSBURGH.—During the week 36,000 tons of Bessemer pig iron were sold to the Cambria Steel Company for second-quarter delivery at average valley prices. Another sale of Bessemer of 25,000 tons to a leading interest at $22, valley furnaces, for second quarter was also made, and this iron, it is said, was a reserve tonnage. Buyers for second-half iron have not yet appeared in the market, and there is no apparent disposition to lower present quotations. With the finishing mills there has been an increase in bookings for future delivery, and plants are all being operated to full capacity. The recent flood interfered considerably with the movement of coke and caused a slight advance in spot furnace coke, but shipments at the present time are about normal. Valley furnace quotations for pig iron for spot delivery are nominally as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke for spot delivery is quoted at $3.25, and foundry coke $3.80 at the ovens.

BUFFALO.—Building operations are about to begin, owing to favorable weather, and appearances indicate an early opening of navigation. Collections are reported fair.

BALTIMORE.—There are still quite a number of out-of-town buyers here, house trade being active, which, with the out-of-town orders that are being received in rather liberal volume, imparts briskness to wholesale trade. Slow deliveries are still a source of complaint, but shipments of seasonable goods continue ahead of this period last year. Sales of dry goods are brisk despite high prices. Business in boots and shoes at wholesale is active, though rather conservative buying is noted in some sections. Clothing manufacturers start next season's business April 1 and are busy making preparations along that line and in filling late spring orders. Paper at wholesale continues to advance on liberal orders. Deliveries are slow and stock is scarce. A strong demand exists for both the better grades and common grades of leaf tobacco, the receipts of which are light, and prices rule very firm. In crockery and glassware, business is satisfactory. Harness manufacturers are well employed. Wholesale grocery trade is about seasonable. Sales of lumber have been curtailed somewhat by unsettled weather, but open weather is expected to improve conditions. Hardwoods show up well, demand being active, with a tendency toward higher prices, and deliveries have improved, owing to a partial relief of the car shortage. Business in drugs at wholesale is good. Dressed poultry is scarce and high. Oils and turpentine tend upward. Business in whiskies at wholesale is brisk and the market for spirits very firm. Collections from most quarters are slow, those from certain southern sections being very slow.

CHICAGO.—Jobbing business has not suffered from the conditions prevailing in monetary and stock-market circles. So far, nothing has resulted other than reports of checking of expansion in railroad construction and contemplated betterments. These latter, however, will have to be done sooner or later. Sales of dry goods have reached their maximum for the spring trade, and the aggregate for the season is 10 per cent. over last year's. Fall sales so far are also in excess of last year's. Retailers, as a rule, have only moderate stocks of goods. Manufacturers of iron and steel report a good business. San Francisco has bought 1,100 tons of structural steel for two buildings there. Good-sized orders have also been placed for other sections. Steel tubes and bar and sheet steel are having a good sale. Wire and nails sell more freely to the west and south. Congestion prevails on early deliveries of pig iron, spot stock being scarce and hard to get. Demand for the second and last quarter is quiet, but the market holds strong. A steel manufacturer says that if Wall street is discounting a commercial depression prices of stocks are still too high, but otherwise they are too low. Weakness prevails in soft coal, with large offerings of demurrage stocks. Demand for lumber has increased at full prices. Paints, oils, groceries and all other lines of trade are having a better sale. Hides are selling at recent prices, with stocks in hands of packers light. Declines are noted in live stock, with increased receipts of hogs and sheep but decreased cattle. Spring work is progressing slowly. The car situation in the west has improved, but in the east it is worse. Money is strong and bank deposits are lower. All banks are closely loaned up. Collections are fair, being slow in the southeast and in spots in South Dakota.

LOUISVILLE.—The Greater Louisville Exposition opened March 18 and will continue until March 30. A large number of out-of-town people are in the city to see the exposition, including many country merchants, who are also buying spring goods. This has stimulated business, and dealers in dry goods, hardware, drugs, hats, clothing and shoes report a fine week's business. The exposition is solely of goods made here, and it is a great success. Whiskey business is keeping up fairly well. Distillers of straight Kentucky whiskey who sell in bond complain that their business has fallen off materially since January, and that jobbers are holding back their orders, waiting for the long-deferred rulings of the Secretary of Agriculture on the food and drug act, in so far as it pertains to whiskey. Collections are fairly good.

ST. LOUIS.—Jobbers in all lines report few buyers in the market at this time, owing to the lateness of the season. However, general business for the season has been larger than ever. Manufacturing plants are overrun with orders, and some of them will not book any more for spring shipment. In the majority of lines collections are satisfactory, and many country merchants are anticipating discounts. Building materials continue active. The railroads continue to do a very large freight business. Indications favor a better supply of cars, thus enabling grain men to market corn and wheat.

KANSAS CITY—The outlook of spring trade in all lines is most promising. Jobbers of dry goods, millinery, hats and caps and boots and shoes continue to report healthy gains in the volume of sales. Trade in groceries and provisions is fully up to expectations. Hardware and building materials of all kinds are in good demand, owing to increased operations. Retail merchants are having an excellent Easter trade. Collections range from fair to good.

MILWAUKEE.—Mild weather stimulates outside operations, and the volume of jobbing and retail trade is enlarging. Collections are variable and money is steadier.

SIOUX CITY. — The merchants' convention brought a number of buyers to market and trade continues to show improvement. Collections are fair.

DAVENPORT.—Retail business in most lines is active, though clothing and shoe dealers report a quiet week. Jobbing trade is good. Manufacturers are busy. Collections are fair. The weather is unusually warm for the season.

ST. PAUL.—Trade conditions are very good in all lines and the volume of business continues increasing over that of 1906. Collections, however, are still behind those of last year. There has been considerable discounting of spring orders and small payments have been made on long past due accounts, which indicates a picking up of business in the country, but no material reduction has been made on the slow accounts. Credit men experience considerable perplexity in passing on spring orders for North Dakota points, where last fall's bills are still outstanding.

MINNEAPOLIS. — Milder weather stimulates spring trade, an improvement being noted both in retail and wholesale lines. Hardware of all kinds is in strong demand, while in drugs, shoes and hats there is marked activity. Collections are improving, though in some localities they are still slow. The flour trade is quiet and improvement is not looked for until the opening of navigation. In the lumber trade there is considerable inquiry for some sizes of pine and business is, on the whole, excellent.

OMAHA.—An increase in the volume of business in all leading lines is reported. Retail trade is good, and collections are about normal. The condition of winter wheat is excellent.

LINCOLN.—Furniture jobbers report good business, but other lines are quiet, though improving.

CHARLESTON.—Wholesale dealers in dry goods, clothing, shoes and groceries report trade and collections quiet, which is attributed to the past season's poor cotton crop.

AUGUSTA.—Jobbers report trade good, and retail is improving. Collections are fair.

ATLANTA.—Trade in general is fair. The furniture and vehicle lines report dullness, and some factories are curtailing output. Live stock is not so active as usual at this season.

RICHMOND.—Jobbers have completed the greater part of early shipments to distant points and are now occupied mainly with trade from nearby territory. Sales for the season are satisfactory, and prospects are that they will continue so, with a reasonable increase in volume over 1906. Manufacturers of and jobbers in shoes now have their salesmen in distant fields with fall samples, but it is as yet too early to forecast the result, except that a favorable prospect is in view. Manufacturers of trunks and bags are well supplied with orders, and further additions to some plants are in course of erection. In all lines the demand for the better grades of merchandise is unabated. Collections show gradual improvement, though from some sections, where crops were seriously affected last fall, requests for extensions continue. Retail trade is stimulated by the approach of Easter.

JACKSONVILLE —Spring trade opens well, but drought continues, and collections are only fair.

BIRMINGHAM.—Southern foundry No. 2 is scarce at $23.50 f. o. b. Birmingham. Trade in general shows a slight decline, with slow collections.

MOBILE.—Local jobbers appear satisfied with the present volume of business, also with collections. Spring and Easter trade is starting off well with retailers. The importation of bananas is somewhat interfered with owing to Central American disputes.

MONTGOMERY.—Wholesale business continues fair. Retail trade shows some improvement over last week. In lumber, implements and kindred lines trade is good. Collections are only fair.

CHATTANOOGA.—Business, wholesale and retail, is of larger volume than a year ago. Real estate is enhancing in value and building operations are active. Collections are good.

MEMPHIS.—Warm weather is stimulating demand for spring goods, and wholesale and retail business is increasing. Factors are making arrangements for next season's crops. Complaints are heard on all sides regarding the car shortage, which is delaying the movement of cotton and lumber.

NASHVILLE.—Jobbers of groceries, dry goods and hardware report an excellent business. Collections are fair to good. Retailers are doing a good business, owing to favorable weather conditions.

LITTLE ROCK.—Spring business is heavy in practically all lines.

NEW ORLEANS.—General trade is fair. Retailers are doing well with Easter goods, but other merchandise is not moving as rapidly as expected. Jobbers are doing possibly a little less than at this date in 1906. Collections are only fair. Building operations are heavier than usual.

FORT WORTH.—Rain is badly needed.

DALLAS.—Collections are fair. Retail trade is opening up in good shape and the volume of business being done is in excess of last year's.

WACO.—Retailers and jobbers report good trade.

SAN FRANCISCO.—Heavy rains this week have caused considerable damage in the interior and traffic is seriously hampered. Reconstruction work continues unabated, despite the weather.

SEATTLE.—Building has been somewhat hampered by recent labor troubles. An early adjustment of these difficulties is expected. Business in all lines is active and freight is now coming through slowly. The lumber and shingle industries still feel the lack of sufficient transportation facilities. Real estate transfers appear to be more upon an investment than speculative basis. Collections are fair.

SPOKANE. — Railroad construction is active. General trade is good, with collections slow.

TACOMA. — Trade conditions are good, and building continues active.

PORTLAND, ORE.—Lumber mills are still closed on account of labor difficulties, but they expect to resume operations in a few days. General trade is good, with collections improving.

TORONTO.—The busiest people are the manufacturers. In almost every line of trade there is complaint that they are unable to keep up with orders. In the clothing and general dry-goods trade this is particularly the case. Manufacturers of ready-made clothing for both men and women say they have never had so brisk a season as they are now experiencing. There has been a further advance in the prices of cottons. Woolens are also very firm. Stocks are light, and purchasers are much worried over the slow deliveries of orders. Oilcloth companies have advanced their quotations. The spring millinery trade has been a very heavy one. It is said there may be some trouble experienced in the obtaining of repeat orders in many lines. Hardware orders are heavy from all parts of the country. Building operations are being carried on to a perhaps even greater extent than was the case last year, and as a result materials are in great demand and are steadily advancing in cost. This activity in building has had considerable effect upon the circulation of money. Collections, however, have shown a tendency to be slow during the past week or two. This slowness has been in evidence mostly in the returns from western Canada. Improvement is looked for, however, before summer sets in. Wool is steady, and a more active trade is looked for later in the spring.

MONTREAL.—All lines of trade continue to move more or less briskly. There is, however, a certain amount of complaint regarding collections. It is said that only about 70 per cent. of dry-goods accounts were met this month, and that similar conditions are to be met in other branches of trade. Retail trade has been a little quiet for some time, and this fact has been, no doubt, the cause of this slowness in collections. The past week or two has seen some improvement in the retail movement, and wholesalers, generally confident, expect freer money by the end of this month. A heavy spring millinery trade has been done notwithstanding high prices. Cotton manufacturers have again withdrawn quotations. Threads are quoted 7½ per cent. higher, and almost all other lines of dry goods show decided firmness. There is a brisk trade in hardware. Metals are in active demand. Orders for structural steel are large and prices hold firm. Groceries are moving well. Cheese is quiet and easier owing to the approaching entry of fodder make into the market. Butter is steady. Flour is firm. The opening of navigation, which will take place shortly, will give considerable impetus to general wholesale trade.

VANCOUVER-VICTORIA—General trade along the coast is brisk. Retail stocks are moving well, and there is a correspondingly active movement of wholesale lines. The lumber trade is enjoying something of a boom. The demand for timber is very brisk and prices are firm. Metal and coal mining is also exceedingly active. A feature of conditions here is the steady expansion of provincial industries. Collections are generally good. The labor problem is one that still presents many difficulties, although there is a good tide of immigration flowing into this part of the country.

WINNIPEG.—Business throughout this part of the country is steadily increasing in volume as the weather becomes warmer. Railway tracks are now all open and goods are moving well. Grain is now coming to market more freely. Inspection at Winnipeg averages 200 cars a day, and it is showing the same good quality that characterized the fall shipments. This grain movement is having an excellent effect upon general retail trade, and collections are expected to show steady improvement. Implement firms are reported as doing a good business taking orders for farm machinery. Millinery openings here were attended by large numbers of buyers. The dry-goods trade is active and values hold firm, although deliveries from manufacturers continue slow.

Money Market.

Liquidation on such an extensive scale as that which the stock market experienced last week could hardly fail to reduce the loans and go some distance toward relieving the strain which was lately seen in money. At the same time the banks this week gained from the Treasury through the redemption of 4 per cent. bonds under Secretary Cortelyou's recent offer. The banks, in fact, appear to have increased their cash by some $6,000,000 from the aggregate currency movement. The drop in foreign exchange to the low figure of the present year failed, as heretofore, to have much effect, in view of the manifest unwillingness of bankers here to make use of the unquestioned power they have to bring gold from abroad, and the raising of the discount rate of the Bank of France from 3 to 3½ per cent. offered direct evidence that the European markets will continue to offer strong obstacles to any movement of gold to this side of the ocean. Throughout the week, however, the market was easy so far as call money was concerned, the renewal rate being generally 4 per cent. until Friday, when it rose to 4½ per cent. Time money was not offered with much freedom, and there seemed to be a very fair demand for it, the only important change in rates being that six months' accommodation could be had at 6 per cent. Commercial paper continues very dull, with only a limited buying demand from out-of town buyers.

New York Banks.

A large decrease in the loans was of course expected, and the falling off of $13,000,000 in that item, shown in last Saturday's averages of the New York Clearing House institutions, was, if anything, smaller than might have been looked for, in view of the enormous liquidation which had occurred in stock-market circles. In fact, the probability seemed to be that, owing to the system of averages employed in making up the statement, the real production was far greater. There was a loss of nearly $3,000,000 in cash, but this was fully $1,000,000 less than the estimated actual loss. Owing to the above changes the deposits decreased nearly $16,000,000, which agreed fairly well with the other items of the statement. The reserve requirements were accordingly reduced by almost $4,000,000, so that the surplus reserve actually increased to the extent of $981,000, rendering the statement, on the whole, a fairly good one. The following compares the figures of the statement with those of the preceding week:

	March 16	March 9	Changes
Loans	$1,053,576,600	$1,066,956,900	D. $13,380,300
Specie	183,454,400	185,456,700	D. 2,002,300
Legal tenders	70,572,300	71,567,300	D. 995,000

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending March 21 shows an aggregate of $3,835,747,000, as against $3,252,220,000 last week and $2,796,408,000 in the corresponding week last year. Canadian clearings for the week aggregate $86,238,000, as against $77,904,000 last week and $65,059,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	March 21	Inc.	Dec.	March 14
New York	$2,646,917,000	47.1	....	$2,103,844,000
Chicago	245,963,000	20.7	....	249,455,000

Foreign Exchange.

Although the supply of bills was not very great, the foreign exchange market this week was quite active. The feature in the early proceedings was the absence of any pressing inquiry for remittances, in view of which demand sterling tended to decline rather sharply. Actual rates, in fact, on last Wednesday touched 4 83, the lowest figure of the year, and long bills also sold down to 4 78.50. The important event of the week, however, was the unexpected raising on Thursday of the Bank of France's minimum discount rate from 3 to 3½ per cent., this being the first change which has occurred in the figures of that institution since May 25, 1900. It was readily appreciated that this action was taken as a measure of protection against a continued drain of gold from Paris to London, growing out of the large credits which American bankers have established in the French capital through operations like the recent sale of the New Haven Railroad's notes in that city. On this news the exchange market here naturally had a sharp rally, demand sterling selling up to 4.84, while francs were decidedly strong on Thursday and Friday.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 16	Mar. 18	Mar. 19	Mar. 20	Mar. 21	Mar. 22
4.80 @ 4.84½	4.80 @ 4.84½	4.80 @ 4.84½	4.80 @ 4.84½	4.80 @ 4.84½	4.80 @ 4.84½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.83.10 @ 4.83.25	4.83.15 @ 4.83.40	4.83.15 @ 4.83.40	4.83.00 @ 4.83.10	4.83.50 @ 4.83.75	4.83.50 @ 4.83.75

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.78.40 @ 4.78.60	4.78.50 @ 4.78.75	4.78.65 @ 4.78.75	4.78.50 @ 4.78.60	4.78.75 @ 4.78.90	4.79.00 @ 4.79.10

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.84⅝ @ 4 85; commercial bills, 4.78¼ @ 4.79⅝; francs, 5.26¼ less 1-32 @ 5.23⅛ less 1-16; reichsmarks, 93¼ @ 94¼.

The Bank of England's minimum discount rate was left unchanged on Thursday at 5 per cent. The weekly return of the institution showed a gain of £150 000 in specie, but its proportion of reserve to liability fell from 46.39 per cent. to 44 per cent. In the London open market call money is 3@4 per cent., and discount is 5@5 1-16 per cent. The Bank of France on Thursday unexpectedly raised its official discount rate from 3 to 3½ per cent. Its report for the week showed a loss of only 3,325,000 francs in gold. The action taken in regard to the bank rate was followed by a corresponding rise of ½ per cent. in the Paris market quotation, discount at that city advancing to 3 7-16 per cent., also the highest figure since 1900. At Berlin the bank rate continues to be 6 per cent., and the market quotation for discount is 5⅝ per cent.

New York Securities Market.

While the improvement in stock values that showed itself on the 15th instant continued to some extent on last Saturday, being aided, in a measure, by a rather more favorable bank statement than had been anticipated, the present week opened with a good deal of nervousness and a feeling of uncertainty about pending developments. There seems to be no doubt but that many weak speculative accounts which were carried over when the market was undergoing the severe break which culminated on Thursday, March 14, were being liquidated between last Monday and Wednesday. In fact, more or less stress was placed upon reports of possible trouble in various quarters, and, although no names were mentioned, there was a good deal of apprehension lest weakness of this kind might be disclosed. Nothing of the kind, however, occurred, and it seemed to be rather evident by last Thursday that the supplementary liquidation of the kind just described was in the main accomplished. As was the case last week, there was a great deal of outright buying of stocks, particularly the dividend-paying kind, in small lots, purchasing orders of that kind coming from all parts of the country. In fact, this movement has attained such magnitude that the transfer offices of not a few companies have been fairly congested, and delays in effecting transfers have been the subject of much complaint. This buying, however beneficial it may be in its ultimate effect, seemed insufficient to give the market much positive support in the face of continued liquidation. When, however, in the middle of the week, it was seen that large blocks of stock were no longer coming out, the short interest covered on an extensive scale and thus gave the market a firmer undertone than it had theretofore exhibited. The raising of its rate by the Bank of France on Thursday was apparently

ignored. It may, indeed, be remarked that throughout the week the New York money market was comparatively easy, the renewal rate for call loans having ruled at 4 to 4½ per cent., so that the stock market had little to contend with in connection with money. The later reports from abroad are, it is true, somewhat disquieting. London advices state that there is thought to be unsoundness in various quarters, which may develop in an acute form at the fortnightly settlement at the Stock Exchange there, which is due next week. This had considerable effect on the New York market, and it should be noted also that foreign interests were sellers throughout the week. There was little of importance in the way of positive news. Some attention has been given to the statements that various railroads contemplate raising their freight rates, but, on the other hand, there are further announcements of a curtailment of expenditures for improvements, the most noteworthy of which was the action adopted by the management of the Erie Railroad in stopping the different enterprises of this kind which it has in progress in the state of New York, on the express ground that the uncertainty as to new legislation renders it impracticable to raise the capital needed for these purposes. As the week progressed the market became less active, with considerable irregularity in the price movements. Trading centered once more in the standard railroad stocks, Union Pacific, Reading, St. Paul, Pennsylvania, together with Amalgamated Copper, furnishing the greater part of the transactions. On Friday the London selling had a further unfavorable effect. The Erie stocks were weak features, and a rather violent break in Canadian Pacific also tended to cause renewed demoralization.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Smallest ever recorded, week ending Sept. 1, 1902			21,196

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and for the thirty-seven weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
March 16, 1907	362,123	4,116,942	4,817,304	3,699,750
March 17, 1906	279,666	2,403,925	2,033,751	3,043,654
March 18, 1905	271,042	2,558,380	4,639,612	4,334,792
Season				
July 1, 1906, to March 16, 1907	15,209,590	192,476,423	149,094,223	146,861,137
July 1, 1905, to March 17, 1906	14,569,683	200,757,081	141,260,427	165,516,967
July 1, 1904, to March 18, 1905	12,796,626	179,115,739	137,107,632	122,909,885

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending March 14, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	231,099	601,856	16,234
London	89,857	85,714	30,017
Bristol	244,536	43,000	3,244
Glasgow	126,801	....	2,803

Total	776,622,859	793,275,136	52,506,768	52,660,845

Cotton exports for the periods set forth this year and last were as follows:

FEBRUARY.

	Bales	*Pounds*	*Values*
1907	863,621	450,962,965	$48,310,102
1906	512,827	263,180,662	28,782,905
SIX MONTHS.			
1906-07	6,409,093	3,331,480,431	350,980,990
1905-06	4,746,920	2,456,914,674	272,408,756

The average export price per pound of cotton in February was 10.7 cents, as compared with 11 cents in February, 1906. For the six months ending with February the price was 10.5 cents, against 11.1 cents for the corresponding period in the preceding year.

Boston Wool Market.

Developments during the past week would tend to indicate that dealers are selling foreign wools, which are in demand, at prices which will show them a profit, this in turn indicating a tendency to clean up stocks if possible. The Manchester mills have bought a large lot of low foreign crossbreds from Boston dealers during the week, which have been on hand for over a year, and it is reported that the price, though about on the basis of the current London sales, shows a loss when carrying charges, interest, etc., are included. It is also reported that these mills have bought the same grade of wool in London, paying ½ cent above what they gave for the wool in Boston. Manufacturers are now about all supplied by the direct wools, and only a few are in the market for small lots. There has been a moderate movement in domestic wools owing to the small stocks of desirable grades, though there has been a good inquiry for three-eighths blood fleeces and territories. The promised improvement in woolen goods has not yet appeared, and the worsted mills are looking about for staple and combing wools, which have sold in moderate quantities. There is very little interest in the west, and dealers are more conservative regarding contracting than for several seasons. The new wools in Arizona continue to sell at from 16 to 20 cents. The sales of the week included clothing territories at 22@23 cents, fall Texas at 22@23 cents, foreign low crossbreds at 39½@40 cents, duty paid, and other small lots at about previous quotations. The London sales continue on about the basis of the previous sale, and this firmness is the chief factor in the strength of the domestic markets.

Boston Shoe and Leather Market.

Sales of sole leather are still of moderate volume, indicating that shoe manufacturers are not yet in the market to cover fall goods orders. Hemlock has sold in lots of 2,000 to 5,000 sides, and union is a little more active, sales as high as 10,000 sides being reported. Oak sole has been quiet. Prices have been held firmly up to the market level. Shipments on previous sales are taking care of receipts. Some improvement is reported in grain leathers, and shoe manufacturers are understood to be preparing to cover orders for fall goods. Domestic hides are quiet. Tanners are looking for concessions and evidently using every effort to weaken the market. Calfskins are firm. Sheepskins are becoming scarce. The shoe market is quiet. There has been some buying of heavy shoes, creedmoors, creoles, etc., some for immediate delivery. As a rule, wholesalers are still engaged in working off surplus stocks and have not yet taken up seriously the problem of next fall's requirements. Shipments are showing up somewhat better. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 100,735 cases; preceding week, 102,795; last year, 98,856; total for 1907, 1,023,165; total for 1906, 1,094,933; decrease, 71,768.

COLONIAL COTTON PRODUCTION.

Cotton production in the colonies of the United Kingdom, Germany, France, Portugal and the Netherlands, and in the Kongo Free State and Anglo-Egyptian Soudan, in 1903, 1904 and 1905 is expressed in terms of bales of 500 pounds gross weight in the table below, except that the production of the British, French and Dutch East Indies is not included. The recent colonial cotton-growing movement of Europe has been directed mostly toward Africa.

The production of 1903, outside of the East Indies, was 9,946 bales; of 1904, 24,490 bales, and of 1905, 31,415 bales, including small estimates in lieu of information for 1904 and 1905. While the total production, as well as the increase in production, during the period mentioned is small, the percentage of increase is large. It may be noticed that the production of 31,415 bales in 1905 was in thirty-eight colonies, etc., or less than 1,000 bales per colony. The total production of the colonies outside of the East Indies in 1905 was equaled by any one of ten counties in South Carolina and was doubled by any one of various counties in Texas:

	1903	1904	1905
French colonies (except French East Indies)	76	407	407
German colonies	430	1,426	1,544
Kongo Free State	1	1	1
Portuguese colonies	6	6	6
Soudan (Anglo-Egyptian)	6,517	15,097	19,441
Colonies of United Kingdom (except British East Indies)	2,916	7,553	10,016
Total	9,946	24,490	31,415

The production of British colonial cotton in colonies exceeding 100,000 pounds is given as follows:

Colony, possession or protectorate—	*Pounds,* 1904	*Pounds,* 1905
British India*	1,530,400,000	1,299,600,000
Ceylon	†177,568	†154,890
Queensland	‡25,832	‡113,008
British Central Africa protectorate	‡643,663	‡§2,377,760
British East Africa protectorates*	291,200	†99,456
Protectorate of Northern Nigeria	†287,233	†123,548
Protectorate of Southern Nigeria	†285,639	†95,306
Colony of Southern Nigeria (Lagos)	†862,912	†1,281,072
St. Vincent*	†126,178	†137,892
Barbadoes	192,061	344,232
Grenada	†314,342	†212,722
Leeward Islands	†116,118	†392,917
Malta*	164,004	162,448
Cyprus	534,254	782,712

*For the twelve months ending March 31 of the year following those stated. †Domestic exports. ‡Unginned cotton. §British Central Africa Bluebook for 1905-06.

The production of cotton in various European colonies of principal yield is as follows:

	Pounds, 1903	*Pounds,* 1904
Dutch East Indies*—		
Ginned cotton	....	75,868
Seed cotton	18,114,065	21,808,820
French colonies*—		
French Indo-China:

*Exports. †Statistics not available.

BEGINNING OF TWO GREAT INDUSTRIES.

According to the official publication of the American Iron and Steel Association, "spelter, as crude metallic zinc is called in commerce, had never before 1859 been produced in the United States upon such conditions as to give hope of its manufacture becoming a settled industry. In 1856 the Lehigh Zinc Company, of South Bethlehem, Pa., caused to be erected a spelter furnace of the Silesian type at its zinc mine near Friedensville, four miles south of Bethlehem. This furnace failed to yield any zinc. Samuel Wetherill, the patentee of some valuable improvements in the manufacture of zinc oxide, also experimented at South Bethlehem in the production of metallic zinc and produced some as early as 1858, but, although he persevered for about two years, and made in all about fifty tons of excellent spelter, the cost of production was too high and his enterprise was abandoned. The first sheet zinc made in this country was rolled by Alan Wood & Sons, of Philadelphia, from an ingot of Mr. Wetherill's spelter. In 1859 Joseph Wharton built for the Lehigh Zinc Company, with which he had been associated since 1851, as stockholder and afterwards as manager, a Belgian spelter furnace of about forty-five retorts, which he operated with the aid of several excellent workmen imported for the purpose. The fuel employed was Pennsylvania anthracite, the retorts and condensers were made by these workmen mainly from the fire clay of Perth Amboy, N. J., and the ore was obtained from the Lehigh Zinc Company's mine near Friedensville. The entire cost of this experiment, including the importation of workmen, construction of furnace, tools and all collateral expenses, was $3,795.89. The quantity of spelter produced was 34,063 pounds. This successful enterprise of Mr. Wharton was the beginning of the manufacture of metallic zinc in this country on a commercial basis. Immediately after this successful experiment Mr. Wharton built at his own risk, at the works of the Lehigh Zinc Company, a complete spelter plant of sixteen Belgian furnaces, which he operated for his own account under lease from the company with absolutely unbroken success until 1863, when he retired from the business.

"Mr. Wharton is also entitled to credit as the pioneer in the manufacture of refined nickel. In 1864 he purchased the abandoned Gap nickel mine in Lancaster county, Pa., and from its ores made metallic nickel and nickel-copper alloy at works he had established at Camden, N. J. In 1876 he produced pure malleable nickel, which he made into various useful articles, being the first person in the world to accomplish this result. For many years he was the only producer of refined nickel in this country, his Gap mine, although now virtually exhausted, being for a quarter of a century the only nickel mine in operation on the American continent. Practically all the nickel that is now made in the United States is obtained from nickel matte produced in Canada. Mr. Wharton's enterprise gave to the government a cheap supply of nickel that was essential to its nickel coinage, and to the whole country an abundant supply of a metal then much needed for making German silver as well as for coinage, and now imperatively needed in much larger quantities for making the nickel steel so largely used for armor plates, gun forgings, etc."

OPENING OF THE BRUGES CANAL.

According to the New York *Tribune*, "there was poetic fitness in the opening of the Bruges canal while the world was commemorating the centenary of the birth of the poet through whose melodious verses the quaint old Flemish town is probably best known to America. The home of Memling and Caxton and John Van Eyck once ranked among the great cities of Europe, but now for many years it has seemed to belong to the past almost as much as the ruins of Tadmor. Its ancient market with its famous belfry and unsurpassed carillon, the lofty spire of Notre Dame, the gothic town hall with its great library, the paintings, the statuary, the wood carvings and innumerable objects admired by visitors, all speak of departed greatness—the greatness of inland towns before sea power became so masterful a factor in peace as well as war. With population fallen to one-fourth its former numbers, with arts and industries departed, there has seemed nothing for the old town to do but to sit amid its ruins and watch the golden tides of commerce which, once enriched, flow past to the more fortunate marts upon the Scheldt, the Elbe and the Rhine.

"Not so, however, the venerable Flemish capital. Railroads and several barge canals it already had, but with the waves of the North sea breaking on a beach only eight miles away, it formed the ambitious resolve of becoming a true seaport. Its little canals to Ghent, to Sluys and to Ostend, used by boats of not more than 500 tons, were useless except for local traffic. What it wanted was for ocean-going steamships to come right up to within the shadow of the great belfry. And so the canal was made, a new cut, straight across to the sea at Heyst, 225 feet wide and twenty-six feet deep, with a couple of miles of piers and jetties and breakwaters to make a safe entrance harbor on the edge of the stormy German ocean, all at a cost of $8,000,000 or so, to give to a decayed old place of 50,000 souls the advantage which nature had denied it. Doubtless there are plenty of economists right here in America who are ready to demonstrate mathematically that it would have been far better for Bruges to have its commerce conveyed by rail to and from Antwerp or some other existing port than to spend $160 for every man, woman and child of its people in digging a ditch so that ships could sail where nature never meant them to sail. But mathematical demonstrations are not always convincing to Flemish merchants."

THE GEOGRAPHICAL TREND OF IRON PRODUCTION.

The drift of pig-iron producing centers can be gauged by data showing percentage contributions better than by any other means. As the output at large has increased very rapidly, comparisons by tonnage are not conclusive. If a given district merely doubled its production from 1890 to 1906, it would show a decreased proportion of the total, as the total increased by more than 150 per cent. in that time, says the *Iron Trade Review*. This table gives the proportionate pig-iron production in the United States by districts in per cent.:

	1890	1900	1902	1903	1904	1905	1906
Mass. and Conn.	0.3	0.1	0.1	0.1	0.1	0.1	0.1

* Production of the single furnace included with lake counties. † Production less than one-twentieth of 1 per cent. ‡ No production.

"Maine has disappeared entirely as a producer, but made only 1,000 tons in 1890. The upper Susquehanna valley has disappeared, largely by reason of the removal of the Lackawanna interest. In 1890 it produced 185,000 tons. The Hocking valley, in Ohio, had fifteen stacks in 1890, but they made only 80,000 tons; now but one furnace is in operation and its production is included with the lake counties. Fifteen years ago some charcoal pig iron was produced in Pennsylvania, but the tonnage has become inconsequential.

"So much for demised districts. The districts which have grown since 1890 in point of percentage have all been more or less tributary to Lake Superior ores. Pennsylvania's contribution as a state has decreased, but Allegheny county has grown largely, from making 14.5 per cent. of the country's total in 1890 to 23.5 per cent. in 1905 and 22.6 per cent. in 1906. The Shenango valley and the scattered western Pennsylvania district have also grown. Ohio has shown a large increase.

"The Great Northern-Steel Corporation ore deal established a situation regarding Lake Superior ores to which the minor developments had been trending, that situation making it practically imperative that any important new erection of blast furnaces by new interests, not already provided with ore, must be based upon other fields. It is impossible to find any clear tendency of this sort worked out into actual production as yet. Comparing 1906 with 1905, it can be seen by the table that the Schuylkill valley, New Jersey, Maryland, North Carolina, Georgia, Texas, Kentucky and Tennessee, all districts not directly tributary to Lake Superior ores, increased their percentage contribution slightly. This is a move which may ultimately be expected to become more general, but probably not for several years. The outside districts may increase their tonnage, but with the large increase still going on in the consumption of Lake Superior ores, their percentages cannot readily increase.

"Comparing 1906 with 1905 in districts directly tributary to the Lake Superior region, it is observed that New York, the lake counties of Ohio, the Mahoning valley, the miscellaneous furnaces in Ohio, and Michigan furnaces increased their percentage contribution. As the country at large increased production by a trifle over 10 per cent., these districts did very well in the point of tonnage.

"Allegheny county fell behind for the time being, making 23.5 per cent. of the country's total in 1905 and only 22.6 per cent. in 1906. The tonnage, however, showed an increase of nearly 300,000 tons, or between 5 and 6 per cent. During the past two calendar years but one absolutely new furnace has been completed in Allegheny county, while there are three new stacks to be blown in during the first half of this year—one McKeesport and two Carrie—and two Duquesne to come not long afterward. These furnaces will make the percentage of Allegheny county higher than ever.

"There is another means of gauging the trend of pig-iron production, and while it is not so precise as the comparison of percentages of actual production, it looks a year or so farther ahead. That method is the examination of furnaces completed or being built. The following summary shows all the blast furnaces blown in since January 1, 1905, or on which construction is now in progress.

"There were blown in during 1905: Ten absolutely new furnaces; one charcoal in Michigan, two coke in Alabama, one merchant furnace in New York, and six regular steel-works furnaces, tributary to Lake Superior.

"There were blown in during 1906: Eleven absolutely new furnaces; one Michigan charcoal stack; four merchant stacks, at Troy, N. Y., in Tennessee, in eastern Pennsylvania (spiegel) and in western Pennsylvania; six regular steel-works furnaces, all tributary to Lake Superior, except that one Cambria stack is not absolutely so.

"There have been blown in thus far in 1907, or are quite well under way, twenty-two furnaces, of which one is a southern merchant stack, five are northern merchant stacks, tributary to Lake Superior (one in Wisconsin), and the remaining sixteen are regular steel-works furnaces, tributary to Lake Superior. Of these sixteen there are seven in western Pennsylvania, these being two Carrie, two Duquesne, one McKeesport and two Aliquippa; three at Youngstown, these being one Haselton and two Ohio; one New York, Lackawanna; one Colorado, and four Indiana, at Gary. It would not be far wrong, however, to give Gary and Aliquippa credit for double these numbers.

"It is obvious from this presentation that the active furnace building is based almost exclusively on Lake Superior ores; two years hence the percentage of the country's total pig iron made from Lake Superior ores will necessarily be greater than it was in 1906 or 1905. In the more distant future the showing may be quite different."

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 30, 1907.

A strike of a great army of railway employees is always a matter of large consequence to the country and to business generally. Existing conditions and recent events which have put an unwonted strain upon the railways render the threatened strike in the west one of the most serious in its possibilities of disturbance that has menaced the business of the country for many years. Keen interest will therefore be felt in the visit of Chairman Knapp, of the Interstate Commerce Commission, and Commissioner of Labor Neill to Chicago, particularly in view of the statement of the representatives of the railway employees that no final action will be taken until the government has had an opportunity to mediate. It is to be hoped that the brighter prospect for a settlement which is apparent at the present writing will be borne out by the result.

Developments of the past week have been favorable and produced a good impression in New York banking circles. The actual happenings embraced important action on the part of the Secretary of the Treasury, Mr. Cortelyou, in the form of announcements that banks owning the 4 per cent. bonds of 1907, and which have deposited the same as security for government deposits, will be permitted to withdraw them for redemption under the Secretary's recent offer, and substitute in lieu thereof municipal and other bonds which come under the classification of permissible investments for savings banks, coupled with another very important step, in the form of a decision to deposit $14,000,000 of money derived from customs receipts in the various New York national bank depositories, which stood ready to furnish the requisite collateral for such deposits. Besides this, the deadlock in regard to the foreign exchange and gold shipment position was broken, and £325,000 was secured in London by American bankers for shipment to New York.

The immediate effects of Secretary Cortelyou's action have been decidedly favorable. No less than $9,000,000 of customs receipts have been deposited during the week in various banks, and although the outflow of money to the interior has naturally been large, while the April 1 interest and dividend payments, for which preparations are being made, are very heavy, the tone of the New York loan market showed a decided easing. Still it must be noted that time money does not weaken but remains at 6 per cent. for all maturities, demonstrating the existence of a very heavy demand for accommodation, and a feeling on the part of lenders that high rates of interest are likely to prevail for a considerable time to come. As respects the gold engagement in London effected on last Monday, it was the general conclusion that the Bank of England has withdrawn its opposition to the taking of gold in London for the American money market. This, however, does not accord very well with the decidedly unfavorable weekly statement of the Bank of England, the reserves of that institution being down to 40 per cent. In fact, the gold engagement under discussion would have been rendered perfectly feasible by the very sharp further decline in foreign exchange at New York last Monday. The principal foreign financial journals, in fact, make no concealment of the fact that this country possesses a decided command of the situation.

One of the most important events of the week in connection with railway and stock-market affairs was the decision handed down on last Thursday by the Supreme Court of Minnesota dissolving the injunction granted by the lower courts of that state, on the application of the attorney-general, against the issue of $60,000,000 of new stock at par, to be subscribed for on that basis by the railway company's stockholders. In consequence of the temporary injunction, the plans of the Great Northern management to obtain the funds needed for improvements and additional facilities for the benefit of its patrons have been held up for several months. It seems that the Supreme Court decides that the offer originally made to the stockholders on December 12, 1906, holds good, and that the company need not carry out the behest of the state law department and make application to the Railroad and Warehouse Commission for permission to issue the additional stock. In stock-market circles this decision has been regarded naturally with a good deal of approval. It is, in fact, argued that it serves as an indication that unwarrantable interference with perfectly proper and legitimate proceedings on the part of railroad managements will not be sustained by the courts, whatever may be the view which the judiciary may take of legislative or executive action designed to correct abuses and curb the disposition of high financiers to exceed powers which appertain to railway and other corporations.

There were in the continental United States last year 83,941,510 people, according to a special report just issued by the Census Bureau. The figures given represent an increase of 7,946,935 over those for the year 1900. The increase from 1905 to 1906 was 1,367,315. If Alaska and the insular possessions be included a total of 93,182,240 inhabitants is attained. That the population is growing in density is, of course, to be expected; there were twenty-eight persons to the square mile of the continental United States in 1906, as compared with twenty-six in 1900. New York retains its position as the most populous American city. It is credited with a population of 4,113,043 in 1906. Chicago had a population of a little less than half that of New York, namely, 2,049,135. The gain in the former case was a little above, in the latter case a little below 20 per cent. Philadelphia's population was 1,441,735 and that of St. Louis 649,320, while Boston had 602,278 and Baltimore 553,669 inhabitants. These figures represent substantial increases, though not so large as in the case of the two cities first mentioned. The drift of the population toward the cities is indicated by the fact that the increase in the population of incorporated places having 8,000 or more inhabitants, exclusive of San Francisco and Los Angeles, from 1900 to 1906, was 15.9 per cent., while the increase for the United States, exclusive of those cities, was only 8.8 per cent.

Events have followed one another with rapidity in Central America since our last writing. It is now learned that the battle in which the Nicaraguan troops defeated the combined forces of Honduras and Salvador at Namasique was one of an apparently decisive nature. Advices from Honduras indicate that as many as 10,000 men were engaged in the struggle at one time—a very large number for a Central American battle—and that the fight lasted for three days. The Nicaraguan troops followed up their success at Namasique with the capture of Choluteca, the most strongly fortified of the Honduran towns, and a day or two after with the capture of Tegucigalpa, the Honduran capital. In the meantime the President of Honduras, Señor Bonilla, fled his country.

With the news of the victory of the Nicaraguan forces rumors about probable intervention gained currency, and that topic has been the subject of much discussion during the week. In the judgment of the diplomats who have in charge the negotiations looking toward that end, however, the time for actual intervention has not yet arrived. Statements of a recriminatory nature are being made, apparently by the authority of the governments principally involved in the late hostilities. The advices received by the diplomatic representatives of the Central American states at Washington leave much to be desired on the score of definiteness. The fear is expressed in some quarters that the installation in Honduras of a provisional government, in sympathy with that of Nicaragua, may eventuate in a combined attack upon the other Central American republics, and this apprehension is rumored to be responsible for widespread preparation in the other states. It is certain that the United States and Mexico would like to see the strained situation in Central America brought to a close, but apparently they do not think that the time is yet ripe for a decided move in the direction of intervention.

Spring opens with disturbed political conditions in a number of directions abroad. An agitation in Roumania, partly agrarian and partly anti-Semitic in origin, has within a short time taken on the form of a peasant revolt there which has been marked by pillaging and incendiarism, and in many cases by serious conflicts with troops endeavoring to repress the excesses of raiding bands. So serious, in fact, has the situation become that the Parliament has passed a bill empowering the government to summarily declare a state of siege. The recent considerable credit granted by Bulgaria for military purposes has stirred Turkey to an unwonted activity. Trouble has again broken out in Morocco, where, owing to the assassination of a French citizen connected with the geodetic mission, followed by attacks on other Europeans, the French government has occupied the town of Oudja, and has intimated that it will demand indemnities and reparation as well as the introduction of measures providing for the protection of foreigners. Disorders have broken out in Persia which may yet call for intervention of some sort by the powers interested in the East. In Russia the echoes of past disturbances are occasionally heard, and the government and the Duma are not yet quite at one over questions such as the abolition of drumhead courts martial, but, on the whole, affairs are being dealt with temperately on both sides.

NEW YORK'S POSITION AS A WORLD CITY.

It has been said that the judgment of foreigners anticipates that of posterity. It would at times be pleasant to believe this, for foreigners sometimes have very agreeable things to say of us. This is particularly true of the United States, which has had in recent years many visitors, and many among those who have spoken favorably of one or another feature or phase of our development. It is, of course, only fair to take with some allowances many of the things spoken under those circumstances, but there are times when, making all allowances, and having regard to the personality and the mental status of those speaking, we may have reason to pause and note how some of the things about us are regarded by men who have through long practice acquired the art of weighing their spoken words, and of viewing affairs in a large perspective which gives the cogency of assured temperance to what they say. It is considerations such as these that prompt us to notice some remarks that fell from Ambassador Bryce at a reception of the New York Chamber of Commerce this week.

Mr. Bryce, who is renowned the world over as a student and publicist no less than a man of affairs, paid, it must be said, a generous tribute to the proud place already won by the greatest city of the new world among her sister communities in the world at large. "There is not," Mr. Bryce said, "in the whole world any gate through which so much commerce passes in and out. There is no place from which the products of a whole continent go forth from one port into what Homer called the 'wide-wayed sea,' from which they are scattered to the farthest lands, as the port of New York. There is no port through which so many articles enter from every part of the earth. Indeed, it is fast becoming the greatest of civilized marts. Of all the products of the United States one-half goes forth to other countries through the port of New York, and of all the commerce that comes in from other countries two-thirds enter through that port." Mr. Bryce said that at present there is no limit that can be set to the growth of the city, and expressed the opinion that in thirty or forty years the population within twenty miles of where he spoke would be the largest aggregation of population on the earth.

Such remarks as these, coming from a statesman who has himself dealt in a large way with questions of commerce as president of the Board of Trade of the United Kingdom, could not but be gratifying and stimulating to his hearers. Not less interesting, we may be sure, were his remarks about the conditions under which business in America is carried on. Business in this country, he said, is carried on in a very bold and dashing way. The markets show a swift responsiveness to every change in conditions, to every change in production and transportation. It should, however, be recollected that what affects the markets and trade of one country must necessarily and to a growing extent affect the markets and trade and finance of other countries. Here the speaker was tempted to suggest caution and moderation to his hearers, but in a half-humorous fashion he admitted that his entreaties would be useless, and that trade must, under modern conditions, go on as it does in a country like this. He was, he said, content to rest in the belief that oscillations in trade and oscillations in stock securities are as inevitable as changes in the temperature and changes in the barometer in our atmosphere, and that they do not necessarily represent any decline in the conditions which make for real prosperity. Mr. Bryce touched upon his general topic in a serene and hopeful temper, which without doubt made for the hospitable reception of his thought; it will be well if his hearers and the wider audience beyond take into their inner consciousness the doctrine that in trade, under modern conditions, no nation lives to itself alone, but that the incidents or accidents of its trade, no less than its commercial policy, tend to affect in some degree the course of business in other countries.

NATIONAL WEALTH OF THE UNITED STATES.

The national wealth of the United States in 1904 was, according to a Census Bulletin, $107,104,192,410. That total represents an increase in four years—from 1900—of $18,586,885,635. It is said by the compilers of these statistics that the advance in national wealth, as disclosed by them, has had no parallel except in the decade from 1850 to 1860. As it is, the most potent influence in increasing the estimate of the nation's wealth from 1900 to 1904 is declared to be the reaction from the low prices of the period of depression from 1893 to 1896. The annual increase of wealth per family for the four years is put at $182.

In the following table are presented the various items of the national wealth as classified by the experts of the Census Bureau. It may be said that some of these figures have heretofore made their appearance, but they are here presented in detail for the purpose of completeness and to facilitate reference:

Real property and improvements taxed	$55,510,228,057
Real property and improvements exempt	6,831,244,570
Live stock	4,073,791,736
Farm implements and machinery	844,989,863
Manufacturing machinery, tools and implts.	3,297,754,180
Gold and silver coin and bullion	1,998,603,308
Railroads and their equipment	11,244,752,000
Street railways	2,219,966,000
Telegraph systems	227,400,000
Telephone systems	585,840,000
Pullman and private cars	123,000,000
Shipping and canals	846,489,804
Privately owned waterworks	275,000,000
Privately owned central electric-light and power stations	562,851,105
Agricultural products	1,899,379,652
Manufactured products	7,409,291,668
Imported merchandise	495,543,685
Mining products	408,0.6,787
Clothing and personal adornments	2,500,000,000
Furniture, carriages and kindred property	5,750,000,000

It will be seen that by far the largest single item in the list, constituting, indeed, more than half of the total, comprises real property and improvements taxed. The amount assigned to this item is $55,510,228,057. The nearest approach to this amount—and that a long distance—is railroads and their equipment, which yields an aggregate of only $11,244,752,000. Manufactured products were valued at only $7,409,291,668, while real property and improvements exempt held fourth place with a value of $6,831,244,750, and furniture, carriages and kindred property held fifth place with a value of $5,750,000,000. Live stock, it may be noted, came after furniture, and manufacturing machinery, tools and implements next after live stock, with clothing and personal ornaments, street railways, gold and silver coin and bullion, and agricultural products in the order named.

It is pointed out in the Census Bulletin referred to that the assessed valuation of property subject to ad valorem taxation has increased from 1850 to the present time, but that it has not kept pace with the increase in the actual national wealth. The total assessed valuation of property in 1902 was $35,338,816,833, while in 1890 it was only $25,473,173,418. The estimated true value of all property in 1902 was $97,610,749,590, as compared with $65,037,091,197 in 1890. The total levies of ad valorem taxes were in 1902 $724,736,539, and the tax rate per $100 of estimated true value was $0.74. The total indebtedness of the continental United States in 1890 was $1,989,112,342, and that of the national government was $851,912,752. In 1902 the total indebtedness of the United States was $2,789,990,120, and that of the national government was $925,011,637. In 1902 the annual interest charge on the public debt of the continental United States was approximately $115,206,558, or an annual payment of $1.46 for each individual. It is noted that in Great Britain the per capita indebtedness of all classes, national and local, was 3.93 times that of the United States, in France 4.86, and in Italy 2.25 times. Another point brought out by the figures is that in the case of the national government, states and territories and counties the receipts exceeded the payments, and at the close of the year these governments had a smaller net indebtedness than at the beginning. In the case of the minor civil divisions, and especially the large cities, the situation was reversed, and the payments for expenditures exceeded the revenue receipts, causing an increase in net indebtedness.

THE SUPPLEMENTARY DECLINE IN SECURITIES.

With Easter holidays abroad and the decision of the New York Stock Exchange to close to-day, the week ended, nevertheless, with a decidedly firmer tone in the Wall street market. In fact, it may be said that the market presents a very much better appearance, and a majority of the professionals and public are apparently convinced that the situation has undergone a real improvement. The fact that assistance has been given to the money market by the Treasury, making it unlikely that the April 1 disbursements and the withdrawals of funds for the interior for that purpose will create any disturbance, has a favorable effect, as also has the recent engagement of gold in London. It is true that a good deal of attention is being paid by the larger kind of stock-market interests to adverse legislation in various states, such as the 2-cent passenger rate bills, and the proposed public utilities law in New York. Neither these matters, however, nor the threatened strike of western railroad employees, have appeared to cause any very pronounced bearishness, and the impression remains that speculative liquidation has been thorough, and, with the shrinkage of values already brought about, discounts future possibly adverse features.

On the other hand, it cannot be claimed that the market at large is very hopeful about an immediate recovery in values or a resumption of bullish speculation on any large scale. Anticipations that, notwithstanding the apparent culmination of the break in the excited and almost panicky markets of March 14 and 15, there would be supplementary declines, have been fully verified by the events of this week. It is interesting to compare the low quotations of last Wednesday and Thursday week with the high prices of 1906, and to supplement this with the lowest quotations reached during the present week, exhibiting in each instance the additional loss which prices suffered during the last five days. This is given in the following tabulation, comprising the principal active trading stocks:

	High, 1906	*Low, Mar.* 14 *or* 15	*Dec.*	*Low, current week*	*Additional decline*

* Now selling ex rights. † Ex dividend. ‡ Advance.

It is true that in quite a number of instances the lowest figure of the present week, nevertheless, represents a recovery from the quotations of two weeks ago. Still it is noteworthy that not a few of the very high-priced stocks, such as Canadian Pacific, Chicago & Northwestern, Great Northern preferred, Illinois Central, Baltimore & Ohio and St. Paul, as well as American Smelting among the industrials of the same grade, had substantial additional declines, though it must be noted that before the week ended most of these securities had regained, at least partially, the loss in question. The fact, however, that in a quieter market, one in which something akin to a feeling of renewed hopefulness reasserted itself, there should have been further recessions of the above kind, shows that the liquidation was not fully completed, and that in many cases stocks which had been carried over had ultimately to be closed out at low prices.

THE STEEL CORPORATION'S EXPANSION.

A great many very interesting features are presented in the annual report of the United States Steel Corporation, entirely apart from the mere showing made for 1906 in connection with the record-breaking earnings and the volume of business done. One of the most impor-

tant of these is the exhibition made as to the expansion of its productive capacity, given below, which shows the percentages of increase in capacity, whether due to purchases of other companies or to improvements and additions to original plants:

JANUARY 1, 1907, COMPARED WITH APRIL 1, 1901.

	Purchase of other co.'s	*Improvements*	*Total increase*
Pig-iron and b. f. products	16.50	46.62	63.12
Steel ingots	13.35	43.29	56.64
Blooms, billets and slabs	17.08	44.69	61.77
Sheet and plate bars	7.90	81.15	89.05
Wire rods	20.95	*Dec.* 7.77	13 18
Finished steel and iron products	14.32	30.01	44.33
Universal Portland cement	...	406.67	406.67

Since the combination was formed in the early part of 1901, it has expended over $200,000,000 for additional property, new construction and extraordinary replacements, while $26,700,000 has been charged off for depreciation, thus constituting an outlay of $226,700,000 in all for keeping the old plants in prime working condition and adding to the output. It is also to be noted that the outlay for new construction does not include the cost of the Union Steel or the Clairton properties, which were added to the combination's operating plants since it was originally formed. In all branches of its business there has been a great addition to the productive capacity, which is a vital point in connection with enterprises of this character. It may be pointed out that it has been placed in a most advantageous position with reference to its reserve supplies of iron ores. At the inception the ore deposits belonging to the different sub-companies were estimated at about 750,000,000 tons. Taking into consideration the ore lands recently acquired from the Great Northern Railway, the ore lands now, according to some estimates, are fully 2,000,000,000 tons. Indeed, the situation of the company, as far as ore supplies in the future are concerned, may be properly deemed impregnable. Moreover, through the improvements and the modernization of the plants, the cost of manufacturing steel is stated to have been reduced by at least $2 per ton from the figures of six years ago, while the earning power of all the properties has increased more than $50,000,000 a year, a sum equal to 10 per cent. upon the common stock, and at the same time its working capital, which was $165,000,000 at the beginning, was $222,000,000 at the close of last year.

Equally interesting is the way in which the organization has decreased instead of increasing its requirements for fixed charges and preferred stock dividends. In the past six years $26,633,000 has been paid into the sinking funds for the bonds of the United States Steel Corporation and those of its subsidiary companies. It will doubtless be remembered that almost from the time the combination was created there was not a little apprehension in many quarters about its ability to sustain a large bonded indebtedness. In reality, notwithstanding the acquisition of the Union Steel and the Clairton companies and the assumption of their bonded indebtedness, together with the issuance of the second mortgage 5 per cent. bonds in exchange for a portion of the 7 per cent. preferred stock, the requirements for preferred dividends and fixed charges of all kinds in 1906 were $3,133,000 less than they were in 1902.

REPORTS OF THE TRUST COMPANIES OF NEW YORK STATE.

The following table shows in detail the condition of the trust companies of New York state on February 26, compared with January 1, and with February 20, 1906:

RESOURCES.

	Feb. 26, 1907	*Jan.* 1, 1907	*Feb.* 20, 1909
Bonds and mortgages:	$83,477,902	$85,931,170	$85,179,850
Stock and bond investments (book value):	309,083,242	300,751,163	293,200,444
Loaned on collaterals:	691,009,894	657,286,751	716,701,386
Other loans:	90,383,802	84,220,554	75,264,879
Overdrafts:	153,577	127,783	146,844
Due from banks, bankers and brokers:	24,276,113	28,021,085	7,732,250
Real estate:	17,408,716	17,637,247	17,690,195
Due from approved reserve depositaries:	94,204,885	112,983,048	*118,344,667
Specie:	49,456,781	43,861,609	18,997,331
Legal tender and bills of national banks:	9,626,757	11,675,393	4,086,187
Cash items:	1,222,112	3,291,119	1,962,863
Investments held as executor, admr., guardian, etc.:	7,020,404	547,082	....
Other assets:	12,354,439	18,911,383	12,906,801
Total	1,389,886,624	1,365,245,430	1,351,364,697

LIABILITIES.

	Feb. 26, 1907	*Jan.* 1, 1907	*Feb.* 20, 1906
Capital stock:	$66,850,000	$65,900,000	$65,200,000
Surplus fund and undivided profits (book value):	178,302,128	174,318,268	163,532,588
Deposits subject to check:	850,893,579	834,823,062	831,715,341
Certificates of deposit:	99,987,315	88,089,596	95,220,162
Amount due trust companies:	43,898,132	41,424,876	41,592,895
Amount due banks and bankers:	36,153,364	37,569,182	34,454,509
Amount due savings banks:	38,701,447	36,792,801	42,921,574
Amount due savings and loan associations:	652,282	546,380	652,995
Amount due as executor, administrator, etc.:	37,228,976	43,541,052	36,288,128
Deposits preferred because secured by pledge as part of company assets:	1,466,000	1,031,000	826,625
Deposits otherwise preferred:	417,156	558,568	586,892
Preferred liabilities:	7,028,404	547,082	....
Other liabilities:	28,247,840	40,103,521	38,372,988
Total	1,389,886,624	1,365,245,430	1,351,364,697

* Cash on deposit.

Compared with January 1, 1907, changes in the principal items are as follows:

	Increase
Stock and bond investments	$8,312,079
Loans on collaterals	33,723,143
Due from banks and bankers	*3,744,973
Deposits subject to check	16,070,517
Certificates of deposit	11,897,720
Cash on hand	1,477,529
Due trust companies	2,473,256
Due banks and bankers	*1,415,818

* Decrease.

Changes in the same items, when compared with returns of a year ago, show as follows:

	Increase
Stock and bond investments	$15,882,798
Loaned on collateral	*25,691,492
Due from banks and bankers	16,543,863
Deposits subject to check	19,178,238
Certificates of deposit	4,767,154
Cash on hand	35,259,269
Due trust companies	2,305,237
Due banks and bankers	1,698,855

*Decrease.

There are several features brought out by the above statistics. One is that loans on collateral are 5 per cent. larger than on January 1 this year, but 3.4 per cent. smaller than on February 20 a year ago. The item of cash on hand, as compared with a year ago, shows an increase of $35,259,209, a gain of 140 per cent., of which over $29,000,000 is specie and $5,600,000 is legal tenders. On the other hand, the amount due from approved reserve depositaries is over $24,000,000 smaller, which, with the items just before mentioned, apparently reflect the working out of the new New York state laws regarding the holding of reserves by trust companies.

TEXAS CROP AND TRADE CONDITIONS.

Dallas, March 25.—The wheat crop in Texas is practically destroyed; the green bugs have absolutely ruined it, and current reports are that they have gone as far north as Oklahoma and have caused a great deal of damage there.

There has been no curtailment of railroad construction in the state; but, on the other hand, construction is active, and extensions on new roads are being built in various parts of the state, and especially in the western portion.

Spring trade with jobbers has in all lines been excellent, and in the majority of lines far ahead of last year. The difficulty does not seem to be in selling goods, but in getting the merchandise.

The implement business is really tremendous. Thousands of settlers are coming from the north and settling in western Texas, and this army has been further increased by a large number of farmers who have deserted their farms in northeast Texas, where they have had failures for the past three years. In consequence, the land in western Texas is being rapidly broken up, thus causing a demand for a large supply of implements of all kinds, which has been difficult to satisfy.

Taking the state as a whole, the past year has been an exceedingly prosperous one. Collections have been good, and the percentage of dealers being carried over by jobbers is smaller than it has been for many years.

The outlook for this year is, at this time, quite good. The indications are that portions of the country where the wheat crop is a failure will be planted in either cotton or corn, and possibly both, and the ground is, at this time, in excellent condition.

W. A. W.

CANADIAN RAILWAY BUILDING.

Toronto, March 28.—For the past ten years Canada has been steadily outgrowing her railway facilities. The expansion of the settled area of the west has during that time, but particularly in the more recent years, been much more rapid than even the wildest dreams of a few years ago ventured to picture. It is no wonder, therefore, that the Dominion finds herself compelled to make the greatest possible efforts to provide transportation facilities which shall cope with this rapid expansion and with her speedily growing production, which is now all too great for available railroads. During the past winter existing roads have been able to handle but a part of the business at their command, and the country has suffered accordingly.

Last year established a record in Canada's railroad building, but the work to be done in 1907 is still vaster. Existing roads have to make extensions in all directions, and the urgent need for new roads demands that no time be wasted in the laying of rails. Work upon the new transcontinental railroad, the Grand Trunk Pacific, is being pushed apace at a dozen different points, but it will take another five years to complete it. The Canadian Northern and the Great Northern are both making their way east and west through a country that is now more or less populated.

Perhaps the greatest difficulty encountered in this work of railway expansion is found in the securing of sufficient labor to carry on the projected work. It is natural that labor of all kinds should be scarce in a new country which is enjoying a period of great prosperity. This is the case in Canada. Something like 6,000 miles of railway will be laid down during the coming season, and about 60,000 men will be required to do the work. Newspaper reports which emanated from the west have said that it was intended to lay 60,000 miles of rail—a small matter of thirteen new transcontinental roads. These reports were absurdly exaggerated. The "sixty thousand" very evidently referred to the number of men needed to do the work in hand. The 6,000 miles of railroad to be laid this year includes extensions to existing systems and double-tracking, which is very rapidly being accomplished in the older portions of the country.

Considerable difficulty was experienced last year in getting sufficient men to do the work in hand, and it was reasonable to expect that with still more work to be done during the season of 1907, the difficulty of securing labor would be greater than ever. The government, however, is taking up the matter, and every effort is being made to bring into the country a class of immigrants who will be suitable for this work. Last year the total immigration amounted to 250,000, of which a fair percentage were men who would be likely to join the construction camps. The government states that this year it will have no difficulty in attracting 300,000 people, and there is every reason to expect that, this being the case, the work of railway construction will go forward pretty much as arranged. It may be that in the extreme west Asiatic labor will play a large part in the accomplishment of this work.

As now mapped out, the Great Northern Railway hopes to lay down 1,000 miles of road this year, the Canadian Northern 1,500, the Canadian Pacific 1,500 and the Grand Trunk Pacific 1,900. At this rate the roads will use a greater quantity of steel rails than Canada is yet able to produce.

EDITORIAL NOTES.

It is fully recognized in stock-market circles that there is an organized bear party in Wall street. The stock-market public is, moreover, still under a certain amount of apprehension regarding the position of various corporations and houses engaged in speculative business. No expression has been more general than one of surprise that no failures or disasters of any kind have occurred in the street, notwithstanding the severe perpendicular drop which had occurred in stock prices and the enormous losses which have undoubtedly been suffered by speculators of all classes, both large and small. There has, however, been no lack of rumors about possible troubles, though these have, as a rule, been of a very indefinite kind, and when sifted down have proved to be based upon the very natural circumstance that some people temporarily in a difficult position had to obtain assistance to tide them over and protect their own interests and those of the clients for whom they acted. On the other hand, the bearish element have not refrained from disseminating unfavorable views about different railroad corporations. The fact that it is difficult at present to obtain additional capital with which to complete improvement work already under way or planned by such organizations furnishes a very available basis for such rumors. As an instance of this, it may be pointed out that the securities of the Erie Railroad Company were raided very vigorously on last Wednesday, and that the declines in those stocks had a more or less adverse influence for a time upon the whole share list. The fact that the Erie has certain short-term obligations maturing within the

next two or three months was made the ground for allegations that its management was encountering difficulty in providing for their renewal or in obtaining additional funds with which to retire them. It seems, however, that there is no foundation for these rumors, and that the only question in reality is in regard to the rate of interest which the Erie will have to pay upon the comparatively small sum which is needed to meet the obligations in question.

Statistics recently given out indicate that there are now 37,000 rural delivery postal routes in operation in the country. Illinois leads the list, with Ohio, Iowa, Indiana and Pennsylvania following not very far behind. The largest proportionate number of routes is found in the middle western states, where the land is mostly level prairie, and where large and progressive rural communities are met with. It appears that now about 4,425 pieces of mail are being handled each month on every rural route, as compared with an average of 3,688 pieces a year ago, an increase of about 20 per cent. Decreases are shown on few routes, and many of the increases are large, the carriers upon some of the routes being taxed to the limit of their carrying ability. There are now forty-six routes on which the amount of mail handled exceeds 15,000 pieces a month, ten of them handling upward of 20,000 pieces a month. The average number of money orders a month now handled by each rural carrier is 685, as compared with 548 a year ago, an increase, as will be seen, of 25 per cent. in the number of money orders.

The first Parliament of the Transvaal colony under its new constitution met recently at Pretoria. Some singular incidents marked the opening proceedings. These were conducted partly in the English and partly in the Dutch language. The High Commissioner who opened the session was an English nobleman, the Earl of Selborne, while General Botha, the Premier, who nominated the successful candidate for the speakership of the lower house, was one of the Boer leaders in the late war. Lord Selborne, in his address, expressed the hope that the grant of self-government to the Transvaal would remove the causes which led to misunderstanding and disunion and result in permanent peace and progress. The most important matter brought up for consideration was the proposal to exclude Asiatics from employment in the mines. The High Commissioner declared that the ministry had resolved that the employment of Chinese there should cease at the earliest possible moment, and the first measure introduced in the Parliament was the so-called "Asiatic ordinance," which was formerly disallowed by the imperial government.

Representatives of the commercial clubs of Boston, St. Louis, Chicago and Cincinnati, who have recently visited the Isthmus of Panama and the West Indies, come back with some very optimistic views regarding the work of digging the canal. A correspondent of BRADSTREET'S who accompanied the delegations writes that they arrived at Colon on March 1. A train was chartered, the entire canal visited, and the work being done under the direction of the commission was carefully examined. Special mention is made of the application of machinery to the work of digging and disposing of the excavated material, which saves the labor of hundreds of men. The correspondent quotes Mr. Elihu Thompson, of Boston, as saying that he had been converted from a sea-level to a lock-canal advocate, and that the canal is the greatest engineering work the world has ever seen. Governor Francis, of Missouri, said that "the $40,000,000 we paid for the canal was the best investment of a commercial character the United States ever made. The work we have seen to-day not only demonstrates the truth of what I have said, but also establishes the fact that the French are entitled to great credit for the work. If we were placed back twenty-five years and were compelled to rely upon the machinery in use at that time, we could not have accomplished in one week or in two weeks the work Mr. Stevens and his assistants have accomplished to-day in twelve hours." The consensus of opinion of the delegates, according to the correspondent, was that the sanitary arrangements are such that white men can do the work, and that the canal will be finished within the next decade.

The exports of meats, dairy products and food animals from this country in the calendar year 1906 aggregated $251,019,160, of which the United Kingdom took $154,313,624, or over 61 per cent. Following will be found the exports of these products in detail for the year 1906:

	To United Kingdom	*To all other countries*	*Total*
Lard	$20,108,939	$37,875,890	$57,984,829
Cattle	34,814,879	3,458,253	38,273,132
Bacon	29,187,198	6,698,954	35,886,152
Beef, fresh	24,481,315	269,969	24,751,284
Hams	18,157,837	2,828,519	20,986,356
Oleomargarine	1,499,396	16,307,540	17,806,936
Pork, other than bacon and hams	8,265,813	5,860,501	14,126,314
Tallow	2,502,724	3,227,132	5,729,856
Butter	3,579,535	968,831	4,548,366
Beef, salted or pickled	1,256,546	3,197,816	4,454,362
Beef, canned	2,048,044	1,444,169	3,492,213
Cheese	2,187,723	440,411	2,628,134
Sheep	437,825	393,670	831,495
Hogs	....	341,232	341,232
All other	5,785,850	*13,392,649	19,178,499
Total	154,313,624	96,705,536	251,019,160

* Includes $2,647,779 worth shipped to Hawaii and Porto Rico.

It is worth noting that this country's shipments of these products in 1896 aggregated $174,000,000, so that the last year of the decade has seen a gain of 45 per cent. over the first. In 1896 Great Britain took over 70 per cent. of these exports, but in 1906 that country took only 61 per cent. In 1896 the United Kingdom's takings aggregated $123,000,000, and the rest of the world a little over $50,000,000. Thus the United Kingdom's takings have increased 25 per cent., while those of the rest of the world have gained 90 per cent.

Reports from the island of Jamaica are that conditions at Kingston, which suffered from earthquake and fire in December, are greatly depressed. Largely instrumental in deepening the depression has been the reported refusal of the foreign insurance companies to pay fire losses originating from the earthquake. This has apparently reacted upon the spirits of the people of Kingston and caused a stoppage of the work of renovation. A correspondent of BRADSTREET'S, who visited Kingston early in March, reported that aside from shoveling débris out of the streets, and opening an occasional small, temporary storeroom in the upper part of the town, little has been done. The streets, he says, are covered with dust, their sides piled with débris, and tottering walls are about on every side. Much of the business formerly done at Kingston has gone to other parts of the island. Efforts to set the city upon its feet again have been made. One plan under consideration was for the imperial government to grant some money outright, and more as a loan to be repaid later, interest to be paid thereon. The proposition to have the island as a whole guarantee the loan, however, aroused some opposition, and the result of the discussion was not plain at the time the correspondent left. Owing to the unsatisfactory condition of the sugar trade and the loss from the earthquake and other causes, there is a disposition to go more largely into the fruit trade, particularly bananas, which have proved profitable in the past.

It seems to be widely believed in Great Britain that the present patent system of that country is being used to some extent to the disadvantage of its industrial development. In introducing a bill to amend the patent laws there lately, the president of the Board of Trade said that out of 14,700 patents issued last year, 6,500 were to foreigners. No objection was made to this showing in the abstract, but Mr. Lloyd-George said that a good many patents were taken out for the purpose of preventing the working of patents in the United Kingdom. The bill introduced by him provides that any applicant may be permitted to demand the revocation of a patent at the expiration of three years if it has not been adequately worked in the United Kingdom. Many British industries were, he said, now bound hand and foot by the working of the present patent system, while others were wiped out thereby. It is noteworthy that the statement of the purposes of the bill was received with applause on both sides of the House of Commons.

Owing to a species of blight which has attacked the cocoa trees of Dutch Guiana, a large part of the crop has been lost in the past three years. To relieve the depression caused by this, the colonial government has made a contract to supply bananas to the United Fruit Company, and is subletting its contracts to former cocoa growers, at the same time offering loans to those agreeing to grow the fruit. This plan is said to have met with popular approval, and 2,500 acres are reported to have been put into banana growing. BRADSTREET'S correspondent reports that the terms of the contract call for 2,500 acres to be planted the first year, 5,000 acres the second year and 7,500 acres the third year, the acreage thus planted to be maintained and cultivated for ten years. In return, the fruit company, it is said, agrees to take the entire crop of bananas at 35 cents per bunch, the fruit to be brought to New York by a line of five steamers running from Paramaribo to this country, the running time of the steamers to be eight days.

The February and eight months' statistics of foreign trade bring out even more clearly than did the preliminary figures the importance of the export trade in raw materials (largely cotton) and manufactures, in bringing about a gain in February exports over a year ago. The exports of food and food-animals and partly manufactured products all decrease, and the gain in raw cotton, in fact, furnishes more the entire increase in exports. In the eight months' returns food exports also make a poor showing. In imports the features are the gains in raw materials and wholly or partly manufactured goods. The detailed returns of exports and imports for February and the eight months' period compare with the preceding year as follows:

EXPORTS.

	1907	1906	*Increase*
Food and animals	$14,243,048	$19,085,945	*$4,842,897
Food, partly prepared	30,062,446	30,350,087	*287,641
Crude materials	55,155,271	35,436,005	19,719,266

* Decrease.

An estimate of the world's output of pig iron in the past calendar year places the total at 58,926,603 tons, of which three countries, the United States, Germany and Great Britain, produced together 47,934,646 tons, or 81.3 per cent., and the United States alone 25,307,191 tons, or nearly 43 per cent. The London *Statist* submits these figures on the world's production of iron in the past three calendar years, the figures being in tons:

	1904	1905	1906
United States	16,497,033	22,992,380	25,307,191
Germany	10,103,941	10,987,623	12,478,067
Great Britain	8,562,658	9,592,737	10,149,388
France	2,999,787	3,076,550	3,200,000
Russia	2,855,032	*2,765,000	*2,750,000
Austria-Hungary	1,450,658	1,514,840	1,600,000
Belgium	1,307,399	1,310,290	1,500,000
Sweden	516,900	527,300	600,000
Spain	420,000	385,000	400,000
Canada	270,942	468,003	541,957
Italy	88,965	140,825	150,000
Japan	112,328	190,375	200,000
India	40,978	47,042	50,000
Total	45,226,621	53,997,965	58,926,603

* Estimated.

With the exception of two countries, Russia and Spain, the 1906 output was the largest ever recorded, but Russia's output for the past two years is estimated. Compared with 1904 there is shown a gain of 13,700,000 tons, or 30.2 per cent. Of this gain the United States contributed 8,810,000 tons, or at the rate of 53 per cent.; Germany contributed 2,375,000 tons, or at the rate of 23 per cent., and Great Britain 1,587,000 tons, or at the rate of 18 per cent. Of the newer countries, Canada shows a gain of just 100 per cent, a rate of increase not equaled by any other country, and explainable by reason of the smaller totals involved.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Penalty—Delay—Government Contract.

The Supreme Court of the United States reversed, in the case of The United States vs. The Bethlehem Steel Company, a decision of the Court of Claims in favor of the company upon a claim for $21,000 withheld by the government as penalty for delay in delivering six disappearing gun carriages made by the company in 1898.

Statute—Validity—Futures—Exception.

The Supreme Court of the United States held, in the case of Gatewood vs. North Carolina, that an exception in favor of those engaged in the business of manufacturing or wholesale merchandising, made by a statute enacted to prevent dealing in futures, does not make the act void as a denial of the equal protection of the laws.

Consignment—Advances—Collateral.

The Supreme Court of Pennsylvania held, In Re Joseph P. Murphy Company, that an agreement by which goods are consigned for sale to persons who are to make advances on the consignment and hold the goods as collateral against the advances, does not render the consignor a debtor for the amount of the advances before sale of the goods, but only for the balance unpaid from the proceeds of the sale.

Bank—Regulation—Constitutional Law.

The Supreme Court of Indiana held, in the case of State vs. Richcreek, that requiring the responsibility and net worth of the individual members of a private concern to be equal to an amount at least double the amount of the capital paid into the bank does not violate the constitutional provisions against taking property without compensation or due process of law, conferring special privileges or immunities or abridging the privileges and immunities of citizens.

Foreign Corporation—Process—Service.

The Supreme Court of the United States held, in the case of St. Marys, etc., Petroleum Company vs. West Virginia, that a domestic corporation whose principal office and works are outside of a state is not deprived of its liberty and property without due process of law, or denied the equal protection of the laws, by a state statute requiring every foreign and non-resident domestic corporation to appoint the state auditor to accept service of process, and exacting an annual fee of $10 for his services.

Contract—Compensation—Death.

The Supreme Court of Kansas held, in the case of Campbell vs. Faxon, that a contract providing that one party is to be the managing agent of a drug store owned by another, and which may be terminated at any time by either party, and in which it is agreed that instead of a salary the agent's compensation shall depend upon the extent and success of the business, creates a personal relation which is dissolved by the death of one of the parties, and which is without binding effect upon the administration of his estate.

Material Men—Federal Jurisdiction.

The Supreme Court of the United States held, in the case of The United States Fidelity & Casualty Company vs. The United States of America, that under the act of 1894 for the protection of material men and laborers in suits brought in the name of the government for their benefit, the United States is a real litigant, not a mere nominal party, and that the government being plaintiff therein and having the legal right, a Circuit Court may take original cognizance of such suits without regard to the matter in dispute.

Federal Employers' Liability Act Upheld.

Judge Speer, sitting in the United States Circuit Court at Macon, Ga., has rendered a decision in the case of Snead, Adm'rs, vs. The Central of Georgia Railway Company, holding constitutional the Employers' Liability act passed by the last Congress. Judge Speer held that to command, prohibit and protect men engaged in the handling of commerce, whether interstate or foreign, is within the domain of national legislative regulation, and that Congress having the right to control commerce on the high seas, it follows that it has the right to control the transportation by land of the same commerce. The opinion quotes as illustrations of the power of Congress to control such matters the creation of the Interstate Commerce Commission, the enactment against arbitrary and discriminating rates, the adoption of the anti trust law forbidding combinations in restraint of trade, held directly applicable to railroads, even though chartered by the states, and the law denouncing rebates and forbidding passes in interstate traffic. Judge Speer holds that no injury can result to corporations or to any useful or valuable power of the state by this national legislation, and that the act does not deprive the corporations of due process of law. It will not escape notice that this decision by Judge Speer is opposed to those of Judges Evans and McCall rendered a short time ago.

Bankruptcy—Insurance Policies—Interest.

In the case of Hiscock, Trustee, vs. Mertens, just decided by the Supreme Court of the United States, the question was involved whether the interest of the latter in three tontine insurance policies held by him passed to the trustee in bankruptcy. The District Court for the Northern District of New York held that it did so pass, but the decision of that court was overruled by the Circuit Court of Appeals for the Second Circuit, and the judgment of the latter court was affirmed by the Federal Supreme Court. The three policies on Mertens's life aggregated $60,000, and Mertens contended that the policies had a surrender value, and that on payment of this value he was entitled to retain them. The final decision sustained this contention.

Bank—Loan—Coadventurers' Liability.

The United States Circuit Court of Appeals for the Seventh Circuit held, in the case of Ijams et al. vs. Andrews, Receiver, that coadventurers in a proposed corporate enterprise are liable to a bank for money borrowed for and used in the enterprise, although the loan is procured by only one of the parties in his name as treasurer and secured by notes originally signed in blank by two of the coadventurers only; such notes being filled in as to amount by the alleged treasurer upon depositing the same with the bank; the liability being predicated upon the fact that the money thus received was directly applied by the alleged treasurer to the intended use and benefit of the coadventurers, and that by implication of law the money was obtained at their instance and applied for their use.

Railroad Rate Laws Attacked.

Judge Thomas G. Jones, sitting in the United States Court at Montgomery, Ala., on Monday issued a temporary injunction against the Alabama Railroad Commission and the attorney-general of the state, on petition of the trunk-line railroads thereof, to prevent the enforcement of the commodity rate law, which fixes the freight rates on one hundred and ten commodities of common production and use, the maximum rate law, and the 2½-cent passenger-rate law lately passed by the legislature. The state officials are required to show cause on March 30 why the injunction should not be made permanent. The railroads base their action on the ground that the laws in question are in violation of the Constitution of the United States, in that they take from them their property without due process of law.

Credit—Privileged Communications.

A point which has often been ruled upon in the United States was brought before the English Court of Appeal in the recent case of Jones vs. The Boot and Shoe Manufacturers' Association. This was an action brought by a retail boot and shoe dealer for slander and libel, the allegation being that in answer to an inquiry as to the plaintiff's stability by one of its subscribers, the association had sent a report to the effect that his position was not considered very strong and that £30 would be a fair risk, and had sent a later communication saying that it had further information which the subscriber could have on application. The association answered that the alleged libel and slander were published in good faith without malice and that the occasions were privileged. In the trial court the plaintiff secured a verdict for £1,000 damages, but the Court of Appeal entered judgment for the defendant association, with costs. The court held that there was no evidence of express malice on the part of the association or its officers, and that information honestly and bona fide given in response to a credit inquiry by an association to one of its members is privileged, and cannot be made a ground for an action for damages for libel or slander unless express malice is affirmatively proved against the defendant.

BUSINESS NOTES.

Final Figures on Railway Building.

Last December the *Railway Age* published figures showing that 6,067 miles of railway were built in this country in 1906, but final returns show that the exact figures are 6,100.82 miles. In view of the correction, and so as to provide a trustworthy record for future reference, we give the following table of railway building by states and territories from January 1 to December 31, 1906:

	No. lines	Miles		No. lines	Miles
Alabama	16	84.14	Missouri	5	30.66
Alaska	3	40.50	Montana	1	16.
Arizona	4	43.49	Nebraska	4	136.74
Arkansas	21	244.03	Nevada	6	360.87
California	19	211.61	New Mexico	6	194.84
Colorado	12	134.60	New York	6	99.91
Florida	14	177.09	N. Carolina	13	129.75
Georgia	10	189.10	N. Dakota	9	228.65
Idaho	6	188.50	Ohio	3	55.
Illinois	12	80.84	Oklahoma	3	57 36
Indiana	7	94.59	Oregon	8	52.59
Indian Ter.	3	104.95	Penns lvania	21	100.81
Iowa	2	30.75	S. Carolina	4	35.20
Kansas	3	59.69	S. Dakota	8	389.03
Kentucky	6	30 41	Tennessee	9	49.65
Louisiana	23	391.20	Texas	29	709.40
Maine	4	44.61	Utah	6	130.60
Maryland	2	8.80	Virginia	10	132.07
Massachusetts	1	4.50	Washington	9	122 37
Michigan	9	42.85	West Virginia	15	130.19
Minnesota	7	114.67	Wisconsin	12	224.96
Mississippi	19	176.92	Wyoming	4	214.85
Total in forty-four states and territories				395	6,100.82

Belated reports from Canadian roads have increased the track laid in Canada during the calendar year 1906 to 1,000.89 miles. This is a gain of 63.18 miles over the figures presented in December last.

Cedar Wood for Lead Pencils.

The lead pencil is one of the most common articles in everyday use, and, according to calculations made by the Forest Service of the Department of Agriculture, nearly 320,000,000 pencils are manufactured in this country every year. To manufacture these millions of pencils there are required 110,000 tons, or 7,300,000 cubic feet, of wood, so that each day in the year 300 tons, or 20,000 cubic feet, of wood are used for pencils. Since practically all of the wood is red cedar, and since the pencil industry is steadily growing, the supply of red cedar is greatly depleted; yet no substitute has been found for it. Leaving out of consideration the imported pencils, the average educated American over ten years of age uses six pencils of home manufacture each year. Ten years ago he used less than five. Red cedar has a soft, straight grain, and when grown under best conditions is very free from defects. Because of its peculiar qualities no equally good substitute for it has ever been found, and it is doubtful if any other wood-using industry is so dependent upon a single species as the pencil industry is dependent upon red cedar. In fact, red cedar suitable for pencil manufacture is the only wood the price of which is always quoted by the pound. Strange as it may seem, no steps have heretofore been taken to provide for a future supply of red cedar. This has been largely due to a lack of information on the rate of growth and the habits of the tree, and to the widespread belief that second-growth red cedar never reaches merchantable size. In accordance with its policy toward the conservation and economic use of commercial woods, the Forest Service has made a careful study of red cedar and has come to the conclusion that it can profitably be grown in regions of its development. Several changes are recommended in present forest management in order to secure the desired growth. In the southern forests the cedar will have to be given a better chance instead of being considered, as now, a negligible quantity in its younger stages, and many of the forest-grown trees which are now cut for fence posts can profitably be left to attain their full development and thus become available for pencil wood.

Optimism in the South.

In a letter to the New York *Evening Post*, R. H. Edmonds, editor of the Baltimore *Manufacturers' Record*, says. "This year's cotton crop, including the seed, will bring to the south over $700,000,000, which is about $300,000,000 more than the total gold production of the world last year. In the last six years the south's cotton crops have aggregated in value about $1,250,000,000 more than for the preceding six years. As this difference in value or gain over the low-price period, when cotton sold at cost and sometimes below, is largely profit, it is safe to say that during the last six years the profit to the south on its cotton crops over the preceding six crops has been more than the total national banking capital of the United States, which is less than $1,000,000,000. Under these conditions one can easily see why the south has been able to pay off its farm mortgages and get on its feet financially. Now that it has done this the profit on its cotton crops henceforth will largely go to bringing about a vast accumulation of capital. Even now the country banks throughout that section are carrying very heavy deposits largely owned by farmers, and it is becoming a serious question in many communities how this surplus money can be wisely invested at home. But cotton by no means represents even a half of the south's agricultural productions. More and more attention is being given to diversified farming. A recent report shows that of perishable freight, fruit and the like, the Pennsylvania Railroad hauled out of southern gateways over 67,000 carloads last year. Other roads likewise hauled enormous quantities, especially to the west, and the amount carried by coastwise steamship lines is indicated in the fact that during the trucking season three or four steamers a day leave Norfolk for Baltimore, Washington and New York loaded mainly with fruits and vegetables. During 1906 the value of property in the south increased $2,600,000,000 over 1905, or an average daily gain of $7,000,000. While farm lands have advanced on an average from 50 to 75 per cent. during the last two or three years, a still greater increase is seen in the value of timber land and coal and iron and other mineral properties. The increase, especially in coal and iron properties, is creating many large fortunes, but as compared with northern values, prices are still very low. In Alabama, for instance, iron-ore properties are hardly ranked as being worth over a few cents a ton in the ground, as compared with a dollar a ton in the Lake Superior region."

Undeveloped Africa.

Samuel P. Verner, writing in the *World's Work* on "Africa Fifty Years Hence," declares that the most important of the favorable influences for future great developments in Africa is the latent wealth of the continent. This undeveloped wealth may be thus summarized: 1. Five million square miles of wealth-producing land, in excess of what is or may be required for the natives, and exclusive of all desert or otherwise unproductive areas. 2. Known gold-bearing reef, vein and placer deposits that will probably produce, for scores of years after opening, a total annual value of $300,000,000. 3. Diamonds and precious stones to the value of $100,000,000 annually. 4. Coal beds covering 800,000 square miles. 5. Copper deposits equal to those of North America and Europe combined. 6. Beds of iron ore aggregating a probable quantity five times in excess of those known in North America. 7. A visible supply of hardwood and other lumber of the total quantity of at least 2,000,000,000,000 cubic feet, solid dimensions. 8. Water powers totaling a horse power equal to ninety times that of Niagara Falls, neglecting all power less than 10,000 horse power. 9. An available labor force, not yet in use, of 15,000,000 able-bodied men. 10. Forty thousand miles of river and lake navigation. 11. Climatic, topographic and meteorological conditions so varied as to present an environment, somewhere within the bounds of the continent, suitable to every race. Then Mr. Verner shows the opposing influences, chief of which is the unhealthfulness of the larger part of Africa, the inaccessibility of the interior of the continent—but which will all be changed by the railroad—and the difficulties presented by the social and political relations between the races. Within fifty years Africa will see the completion of two great transcontinental north-and-south trunk lines and five east-and-west trunk lines. There will also be a number of subsidiary lines feeding these trunk systems. The termini of these railway lines will be the great African ports. Cape Town should then have a population of over 1,000,000 whites and half as many blacks. Kimberley will be as large as Birmingham; Johannesburg as large as Sheffield; Buluwayo as large as Leeds. At Victoria Falls there will be another Buffalo; near the southern end of the Tanganyika will be a city as large as Detroit. Stanleyville, the present metropolis of the center of the Kongo, will be a black St. Louis. On the shores of Lake Albert there will be an African Cleveland. Khartoum will rival Memphis, and Cairo and Alexandria together will have the present population of New York. Somewhere in the highlands of Abyssinia, on the blue Nile, there will have arisen the African Pittsburgh; a black New Orleans, somewhere about the lower Niger, will be shipping palm oil to its prototype across the Atlantic.

CURRENT BUSINESS NEWS.

Commercial.

The following statement, taken from Beerbohm's *London List*, shows the world's wheat crops for the years named:

	Bushels		*Bushels*
1875	1,800,000,000	1897	2,281,000,000
1878	2,000,000,000	1901	2,940,000,000
1884	2,240,000,000	1902	3,195,000,000
1887	2,280,000,000	1903	3,292,000,000
1890	2,264,000,000	1904	3,202,000,000
1893	2,474,000,000	1905	3,362,000,000
1895	2,496,000,000	1906	3,500,000,000

Dispatches from Paris this week indicate that while the campaign in favor of higher tariff duties on French imports with maximum and minimum rates is primarily to get preferential concessions from all foreign countries in harmony with the system of double rates, it is impossible to deny that a special agitation is being directed against America. French commercial interests are convinced that America has more to lose than France in refusing to make a reciprocity treaty, as they believe that many French articles taken by the United States cannot be procured elsewhere and would be imported, irrespective of rates. On the other hand, American exports, as in the case of cotton-seed oil, would feel the force of every increase of duties. There is also considerable resentment against the seeming willingness of the United States to make a commercial arrangement with Germany, while the claims of France are ignored.

Snow reports the condition of winter wheat in the leading states at 85, as compared with 90 at this date last year.

The New Orleans *Picayune* says: "Because of the inability of the railroads to furnish freight cars for the handling of the products of their mills, cypress lumber and shingle manufacturers of southwest Louisiana have contracted for the construction of barges and schooners for the transportation of their products from Berwick, Morgan City, New Iberia, Franklin and other points to Galveston, Houston, Cairo, St. Louis, Cincinnati and other Mississippi and Ohio river points, bringing about a condition in the transportation of lumber which has never existed in the history of the cypress mills of Louisiana. The transportation of lumber and shingles up the Mississippi and Ohio rivers by means of barges and tugs is something which has never been tried. It is stated by manufacturers that the cost of transporting the product by water will be about $1 a thousand feet greater than by rail, but manufacturers declare that they have sold the lumber and shingles, and that the stuff must be delivered even if this has to be done at a sacrifice."

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The outlook for the crop continues highly favorable. France—The outlook for the crops is excellent, the weather being favorable. Supplies are increasing. Germany—Weather conditions are unfavorable for the crop, and the great part of the area under wheat which was abandoned as a result of winter-killing is being replaced by other grain. Hungary—The unsatisfactory condition, as reported last week, is again mentioned, with complaints increasing. Some of the area under wheat has been abandoned. Roumania—There are occasional complaints heard as a result of winter-killing. Bulgaria, Italy and North Africa—The crop outlook continues favorable. Russia—The crop outlook continues generally favorable, but a smaller area is mentioned as having been seeded under winter grain. Arrivals at the ports are very small and stocks are showing some decrease. Spain and Portugal — The droughty conditions, as reported last week, still continue.

The governor of North Dakota has approved the bill passed by the legislature of that state placing a specific tax on grain in store. This makes the tax on wheat ⅜ cent per bushel, and oats, barley, corn, speltz and rye ⅛ cent each.

The Standard Oil Company on Tuesday advanced the price of all grades of gasoline, naphtha and refined oil in barrels ¼ cent per gallon.

It is reported that packers of and dealers in asparagus are greatly disturbed over the reports of floods in the Sacramento river, which tend to show that the islands where the bulk of the California asparagus is grown are seriously, and perhaps permanently, injured. One thing seems assured, and that is that the pack will be extremely small and prices accordingly high.

According to the secretary of the Kansas Grain Dealers' Association, Kansas will plant the smallest acreage of oats the state has ever had on account of high price of seed. Acreage last year was 1,650,000 acres and crop 24,780,000 bushels.

Beerbohm says: "As indicating the very unusual condition of the trade in Russia, our Ibrail correspondent, writing on March 7, says that numerous transactions in wheat, rye and even oats have been lately concluded for transport by rail from Moldavia to the famine districts of Russia. On the other hand, our Riga correspondent also reports that a cargo of American wheat has arrived there via London, and that inquiries are being made at Riga for Kubanka wheat for the interior of Russia. This latter is a very suggestive point. The British vice-consul at Nicolaeiff says that in the famine districts it was feared there would be another crop failure because the seed grain was provided too late and of inferior quality."

The ban upon Chicago canned meat as food for the British army has been removed by the War Office. This information is contained in a reply sent to an unofficial inquiry from Washington. This reply is signed by R. H. Brade, Assistant Secretary of the War Office, and says: "Referring to the reports of the officer recently sent on inspection duty to Chicago, I am commanded by the army to acquaint you that, although such reports are of a confidential nature and cannot therefore be communicated to the public, they have been satisfactory. I am to add that no bias exists on the part of the War Department against Chicago meat so long as its manufacture is properly supervised."

In connection with the reports of a falling off in the orders of manufacturers, it was stated in Wall street Tuesday that the business of the General Electric Company for the first six weeks of the new fiscal year, beginning February 1, displayed an increase of between 30 and 35 per cent. over the corresponding period of 1906. Orders received during this period were at the rate of $78,000,000 for the year, this comparing with a total gross business of $58,000,000 for the year just ended. At least nine months of the present year are expected to yield large volumes of orders.

A Berlin dispatch to the London *Times* states that inquiries which have been addressed to the cotton mills of Germany show that business is extraordinarily active in the cotton industry. Goods for immediate delivery are unobtainable. Orders are now being accepted only for the second quarter of next year.

On Wednesday the Straits of Mackinac were opened to navigation for the season.

Internal revenue receipts in February were larger by nearly $2,000,000 than in the same month of last year. The total receipts last month were $20,260,553, as against $18,343,235 in February, 1906, and there was a gain of $13,444,032 in receipts for the eight months ended February 28 as compared with the corresponding period of the fiscal year 1906.

This week's snow map showed no snow whatever in any part of the wheat-raising sections. There was some snow still in northern Wisconsin and northern Michigan, and a trace in extreme northern North Dakota. Otherwise the spring-wheat states were entirely bare of snow.

The price of ice in Manhattan will be 30 cents a hundred pounds the coming season, according to Vice-President Johnson, of the American Ice Company. He says that there should be a plentiful supply, as an unusually large crop has been cut and stored.

On Thursday the New York Cotton Exchange members voted to retain good ordinary and low middling tinged as contract grades, but to eliminate strict low middling stained.

Financial.

Consul A. A. Winslow, of Valparaiso, reports on the need of an American banking house, the disseminating of printed matter, and the trade outlook of Chile, as follows: A good American banking house at Valparaiso would be a great step toward securing the trade of this country, which is growing with leaps and bounds, having increased 300 per cent. in the last ten years.

A membership on the New York Produce Exchange sold Monday for $375, an advance of $65 over the previous sale.

Directors of the Nipissing Mines Company on Monday declared the regular quarterly dividend of 3 per cent, but passed the extra 2 per cent. declared three months ago. Since the company's organization last spring there has been disbursed 16 per cent., of which 12 per cent. has been regular, 4 per cent. extra.

Jesse P. Wellborn has been chosen by the board of directors of the Col rado Fuel & Iron Company to succeed the late Frank J. Hearne as president of that company.

The Distillers' Securities Corporation has declared a quarterly dividend of 1½ per cent., payable April 27. This is an increase of one-quarter of 1 per cent. as compared with the previous disbursement, which was made on January 28 last, and places the stock on a 6 per cent. basis.

The American Tobacco Company has purchased out of surplus an additional $500,000 of its 4 per cent. bonds and delivered them to the trustee, the Morton Trust Company, for cancellation. The Morton Trust Company, as trustee, has expended $500,000 in the purchase of the American Tobacco Company's 6 per cent bonds, and has canceled the same.

Directors of the United Copper Company have declared a regular quarterly dividend of 1¾ per cent., payable April 29. This action places the stock on a regular 7 per cent. basis. At the previous declaration, in January, the form of the common dividend was changed from 1¼ per cent. regular and ½ per cent. extra to 1½ per cent. regular and ¼ per cent. extra.

An agreement has been concluded between Finance Minister Leguia, of Peru, and the Peruvian Corporation of London, settling the differences between the government of Peru and the corporation. The Peruvian Corporation was formed nearly twenty years ago to undertake railroad building, etc., in Peru, but disputes regarding payments interfered with the progress of the work for seven or eight years past. The questions in dispute were eventually submitted to the Peruvian Chamber of Deputies, which authorized the government to settle them. In 1902 the total working length of the Peruvian railways was 1,146 miles, of which 844 miles were worked by the Peruvian Corporation.

It was announced in Cape Town Tuesday that a proclamation would be issued about the end of April opening the Madibi (Africa) gold fields to public digging. Official assays show an average of over one ounce of pure gold to a ton.

It is reported that a loan by Sao Paulo state for £5,000,000 will be issued soon, and that the government will give as guarantee coffee, to be deposited at Havre and Antwerp.

The Comptroller of the Currency on Tuesday issued a call for the condition of national banks at the close of business Friday, March 22.

A decrease of $4,766,401 in the assets of the fire-insurance companies doing business in New York, when compared with the assets for 1905, is shown in the report for the year ended December 31 last of the State Insurance Department. Total assets were $404,750,941, not including those held abroad, nor premium notes of mutual companies. Liabilities, excepting scrip and capital, were $259,545,184, an increase of $29,728,348. Included in the figures are these: Aggregate premiums received, $38,590,184; fire losses paid, $18,391,252; losses incurred, $18,802,588; fire risks written, $5,178,707,387, an increase of $318,949,369 over 1905. Of the income of fire and marine companies $255,955,645 was received in premiums; $240,424,692 was paid for losses, $109,885,368 for miscellaneous disbursements, and $8,913,785 for dividends.

According to the New York News Bureau, corporation short-time notes to the amount of $47,660,000 will mature and have to be refunded within the next three months, but that amount of fresh capital will not have to be raised, as provision has been made for the largest maturity, that of the American Telephone & Telegraph Company, of $20,000,000, on May 1. The following table indicates the principal note issues which mature within the time specified:

	Interest, p. ct.	*Maturity*	*Amount*
Erie Railroad Company	6	April 8	$3,000,000
Erie Railroad Company	6	June 1	1,000,000
Erie Railroad Company	6	July 2	1,000,000
Am. Telephone & Telegraph Co.	5	May 1	20,000,000
Wabash Railroad Company	5	May 10	6,160,000
Chicago & Alton Railway Co	4	July 1	5,000,000
Chicago, Rock Island & Pac. Ry.	4½	July 1	7,500,000
Chicago Southern Railway	5	July 1	4,000,000
Total			47,660,000

The following table indicates the maturities after July 2:

	Interest, p. ct.	*Maturity*	*Amount*
Western Electric & Mfg. Co.	5	Aug. 1	$5,000,000
United Railroads of Yucatan	5	Sept. 1	1,000,000
American Locomotive Co	5	Oct. 1	1,000,000
Republic Iron & Steel Co	5	Oct. 1	944,000
National Railroad of Mexico	5	Oct. 1	8,500,000
Pennsylvania Company	4½	Nov. 1	50,000,000
Kansas City Railway & Light Co	5	Dec. 15	3,000,000
Total			70,444,000

Provision has been made for taking up the $50,000,000 Pennsylvania notes on November 1.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

On transactions of 345 shares—remarkably large for this security—Standard Oil stock sold down on Thursday to 494, the lowest price for seven years. In May, 1901, the stock touched 842.

Railroads.

On Tuesday the Pennsylvania Senate passed finally the House Two-Cent Railroad Fare bill. The bill now goes to the House for concurrence in the Senate amendments, one of which provides for a fine of $1,000 for each and every offense committed by a railroad company against the provisions of the act.

Governor Warner, of Michigan, on Tuesday sent to the legislature a special message urging that both houses take early action on the Two-Cent Railroad Fare Bill which is before the legislature. He says that there have been ample hearings on the bill and that nothing can be gained.

On Tuesday the railroad managers of Minnesota and a committee of the legislature reported an agreement on passenger rates. The agreement reads: "To put on sale 10,000-mile interchangeable mileage books at a rate of 2 cents a mile, the purchaser to always have the privilege of returning unused portions and receiving money back. To place on sale 500-mile family mileage books good on the road of issue and good until used up, to be used by any member of family at 2 cents a mile. Round trip tickets anywhere within the state at 2 cents a mile, good at any time, and returnable at any time for money due."

The passage by the Nebraska legislature, Tuesday, of the bill for the taxation of railroad property in cities and villages for local purposes on the same basis on which other property is taxed marks the end of a fight that began in the legislature in 1901. The bill will increase the annual assessment of railroads in Nebraska upward of $500,000, about $100,000 of which will go into the city treasury at Omaha. It provides that the franchise value of roads shall be included in the property subject to this tax, except that the valuation shall be distributed through the state instead of taxed in bulk in each community, as is done with tangible property.

On Tuesday, by a vote of 36 to 24, the New Jersey Assembly passed the Wright Commission bill for the regulating of railroads in the state, the commission to be elected by the people. The commissioners, under the powers granted in the bill, can enter any railroad yard or office, compel the production of any book of record, regulate and fix rates, charges for demurrage, etc.

Industrial.

Regarding the reports that contracts for steel rails and other products were being canceled, E. H. Gary, chairman of the board of the United States Steel Corporation, is quoted as follows: "We have not had any cancellations of orders for rails or other products. Business for all forms of our products is much larger in volume than in the corresponding period last year. So far this month we have entered in new business 10,000 tons a day of finished products in excess of the tonnages sold in twenty-five days of March last year."

Fifty locomotives and 100,000 tons of American railway material are to be shipped from Baltimore to Dalny, Manchuria, making up what is believed to be the greatest shipment of railway material to a single order in the history of this country, and the first shipment of the sort to Manchuria.

The Tennessee Coal & Iron Company has decided practically to rebuild its steel-rail mill. The mill when completed will have a capacity of from 45,000 to 50,000 tons of open-hearth steel rails a month, or nearly 600,000 tons a year. This will make the Tennessee Coal & Iron Company the third largest producer of steel rails in this country.

A remarkable incident in the iron market is the offering for shipment from Shanghai of a lot of 5,000 tons of basic pig made in China. The *Iron Age*, in reporting the incident, says that the analysis is a very good one, the iron being guaranteed under .05 in sulphur, .70 in silicon and .30 in phosphorus. Half of the quantity is offered to arrive in June, and the other 2,500 tons for third-quarter delivery.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Bright, warm, almost summer weather, stimulating alike to retail trade and crop progress; a cessation of liquidation in securities, and an easing of strain in the money markets, so far as the April 1 period is concerned, are the notably favorable features in an encouraging week. Reports as to Easter demand are of a large, in fact record, trade, thus crowning a three months' period which, except in a few sections, has exceeded any preceding year, and the only drawback in which has been the getting of goods in sufficient volume to supply demand. Less pessimism also is shown as to the crop outlook; insect damage is, comparatively speaking, minimized, and winter wheat, aside from parts of the southwest and Texas, promises well, though it is, of course, still too early to forecast ultimate outturn. Action by the Treasury Department has made for less stringency in money at the metropolis, and the slowing down of stock-market liquidation has been a feature favorable to optimism as to the future. Additionally favorable features are the large gains—10 per cent. approximately—in gross railway earnings for March over the large earnings of last year; failures are few and unimportant, and bank clearings, swelled by past stock-market activity, are heavy.

On the other hand, there are some features tending to conservatism as to the future that deserve attention. Collections are still irregular—backward in fact—which is attributed variously to slow deliveries of goods, congestion of farm-product deliveries, and finally to the heavily increased volume of past trade. In other words, collections have not quite maintained the ratio of business increase. Money is still high in price, a long period of this condition is apparently in sight, and there is a disposition to await a clearer view of the future, and especially the matter of crop prospects, before extensive commitments are made as to the distant future. This is, perhaps, best illustrated by the holding off by buyers of pig iron for the third quarter and by the quieting in demand for fine cotton fabrics for later delivery. For anything like prompt delivery, cotton goods are, however, strong, and some fabrics are really higher. Export trade shows rather more life. Wool is quiet, partly because of high money, and dealers refuse to meet high views of growers. There is more unrest in labor circles, notably in the matter of railway employees and of building hands, though in the former case the prospects are of arbitration being accepted by the men, which may settle the threatened western railway strike and avert a widespread tie-up of traffic. Talk of retrenchment by railways is still rife, but cancellations of orders for rails and other material are so far reported light. It is notable that the west reports little of this, and, indeed, in some sections, particularly the southwest, railway extension goes on as freely as ever. There is less firmness in the prices of some metals, copper principally, but iron prices are held firmly by the deadlock between buyers and sellers as to distant months. Despite all influences making for conservatism, however, there is visible great and notable confidence as to the future of the country's trade, and a disposition to believe that a slight slowing down in the high rate of speed which has been visible for a long time past will be beneficial, if safe and steady progress in the future is to be maintained.

Sales of foundry pig iron for last-half delivery are light, but more inquiries seem to be cropping up and the market is firmer, in sympathy with the strength in Bessemer pig. Furnace interests are so well situated that they appear able to resist demands for price concessions. Bessemer pig is firmer on indications that some leading interests did not fully cover their requirements by the purchases of last week. A somewhat remarkable feature in the general market is the reported offering, at an attractive price, of 5,000 tons of basic pig made in China. The paucity of steel in the central west continues. In finished lines the situation is a strong one, with little trustworthy evidence of cancellations. A large demand for structural material is in sight. Demand for cast-iron pipe is heavy, and trade in tubes, sheets, bars and wire is exceptionally brisk—without precedent, in fact. Steel-car builders are freely specifying on plate contracts. Traction interests furnish the bulk of the new business booked in the steel-rail line. To catch up with orders seems to be the chief point with producers. Coke is easier, the supply being plentiful. Copper is weaker, with business quieter, as buyers appear disposed to hold aloof until conditions oversea and here become more settled.

Crop reports to BRADSTREET'S are good. Green-bug damage in the west has been confined to Texas, south Oklahoma and southern Kansas. In Texas the loss is almost total, cotton and corn taking its place. In Missouri, Kansas and Nebraska the wheat-crop promise is really excellent. East of the Mississippi the reports are better than last week. In Ohio the outlook has been improved by rains. Winter wheat in the north Pacific states is also very promising. Corn planting has been finished in Texas, where rain is needed. Cotton planting is in full swing throughout the southern half of the belt. In Louisiana the crop is up and being chopped out. The ground generally is in good condition, except in Texas, which is dry. A very large acreage is indicated. The snow has disappeared in the northwest and planting preparations are going forward. Indeed, some seeding of spring wheat is claimed in Nebraska. Southern fruit and vegetable crop reports are good.

Dry-goods jobbing at the east is active, the only complaint being slow deliveries of goods by first hands and mills. With agents the demand for distant months' delivery is quieter, as indicated last week, but prices show great strength, and bleached and printed goods are actually higher. Fine yarn goods for late delivery are quiet. There is more doing in export trade with China. In woolen goods there is more doing in men's wear for fall. Raw silk is higher and the silk trade is active. In raw wool the market is quiet, dealers are not contracting for western clips, and high money rates are complained of as discouraging operations. High foreign markets hold prices steady here. Raw cotton has eased 15 points for spots and 15 to 20 points for futures on large receipts, lower cables, but more particularly in sympathy with stock-market influences.

The New York stock market is dull but shows a firmer undertone, the Easter holidays abroad and the closing of the local Stock Exchange on Saturday discouraging any disposition toward activity. Extensive liquidation has apparently ceased, but despite the somewhat better money market conditions and the allegations that powerful interests have again come to the support of prices, covering of shorts seems mainly responsible for the moderate rallies which have been witnessed. Foreign exchange is steadier at 4.83.80, after having shown decided early weakness, due to selling of bills against foreign purchases of securities. On last Monday £325,000 gold was engaged in London for New York.

Bank clearings for the week ending March 28 aggregate $3,063,262,000, 20 per cent. under last week, but 18.6 per cent. above the same week last year. Outside of New York exchange amounts to $1,089,800,000, 8 per cent. below last week, but 16 per cent. over the corresponding week last year.

Business failures for the week ending March 28 number 166, against 157 last week, 169 in the like week of 1906, 227 in 1905, 212 in 1904 and 145 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending March 28 aggregated 2,707,566 bushels, against 1,878,614 bushels last week, 1,542,852 bushels this week last year, 988,600 bushels in 1905 and 2,904,110 bushels in 1902. For the past thirty-nine weeks of the fiscal year the exports are 130,591,045 bushels, against 102,988,756 bushels in 1905-06, 47,632,309 bushels in 1904-05 and 195,662,252 bushels in 1901-02. Corn exports for the week are 1,844,633 bushels, against 2,508,786 bushels last week, 2,643,479 bushels a year ago and 2,430,652 bushels in 1905. For the fiscal year to date the exports are 51,666,856 bushels, against 94,869,750 bushels in 1905-06 and 57,378,836 bushels in 1904-05.

IN CANADA.

Slow deliveries of spring goods hamper trade throughout Canada and affect collections, which are, however, reported better than for some time past. Immigration is heavy, but it will all be needed, because 6,000 miles of railroad are to be built this year, and 60,000 men are needed for this work alone. Canadian mills cannot produce enough rails to supply the demand. Building construction promises to be large, and the hardware and kindred lines are active. Canadian railways are reported in the market for large quantities of rolling stock. Montreal reports manufacturers' slow deliveries affecting trade. Retail trade in the country is affected by the condition of country roads. A scarcity of ready money in Ontario is reported, due to active trade and industry scattering money throughout the country instead of its lying in the banks. Winnipeg jobbers are behind on deliveries of spring goods to the country, owing to slow deliveries from the east. Industry is active in British Columbia, and receipts of goods from the east allow of spring trade expanding. Failures for the week number 21, as against 32 last week and 18 in this week last year. Clearings for the week aggregate $78,639,000, a decrease of 8.8 per cent. from last week, but a gain of 27.5 per cent. over this week a year ago.

CROP REPORTS GOOD.

CHICAGO.—The crop outlook is more favorable. The only important damage thus far is in Texas, southern Oklahoma and southern Kansas, but it is not large.

ST. LOUIS.—Winter-wheat reports are more favorable, and, in spite of unfavorable talk regarding the green bug and other obstacles, an average crop is expected.

KANSAS CITY.—Growing wheat is further advanced than at this time last year, and the outlook is most promising.

NEW ORLEANS.—Sugar cane and rice are doing well, and both crops are now in the condition they frequently show during May. Cotton in many sections has been planted, and in some quarters it is up and has been chopped out. The acreage is large, and from now on the outcome depends upon the weather. Much field corn has been planted, and some of it has already been worked a second time. Small crops are in good condition.

ATLANTA.—The weather continues ideal for crop preparations.

CINCINNATI.—Wheat-crop conditions look better. A large amount of spring oats has been sown, and much plowing for corn has been done.

ST. JOSEPH.—A light rain which fell on Thursday over this entire territory was beneficial to wheat, the condition of which is excellent.

DALLAS.—Farmers have about finished planting corn, and in some localities it is up and looking well. Cotton is being rapidly planted and the acreage will be large. Rain is needed.

OMAHA.—Reports as to the condition of winter wheat continue most promising.

SIOUX FALLS.—Farmers are preparing for spring work, and some seeding has been done. The soil is in excellent condition.

WICHITA.—There are no green bugs in this section. Wheat is suffering slightly from hot and dry weather, but not seriously as yet.

SPOKANE.—Winter wheat so far has suffered no setback.

TACOMA.—Grain crops are regarded as especially promising, and conditions for a large fruit crop were never better.

NASHVILLE.—Crop conditions are favorable.

AUGUSTA.—The weather continues excellent for crop preparations, in many sections corn planting having been finished. Hasty preparation is being made for cotton planting.

MONTGOMERY.—The weather is extremely avorable for planters, and a fair acreage has already been sown.

FORT WORTH.—Dry weather still prevails and planting is progressing slowly.

CHARLESTON.—Strawberries are being shipped at good prices. Cabbages are being held owing to low prices.

LITTLE ROCK.—Planting of both cotton and other crops has progressed rapidly, and strawberries are already starting to market. The outlook for a large fruit crop is considered good.

WACO.—Rain is very badly needed, especially for small grain.

TRADE REPORTS.

At New York a good active demand still continues in dry goods. Cotton goods are most active, demand being for all classes and in many instances it is impossible to fill orders. Silks continue in good request, demand is steadily increasing and prices are well maintained. Dress goods for both the manufacturing and retail trades are active and there is a good demand for all classes of worsted goods for men's wear, though clothing houses have not done much business for fall, but they are busy now completing their spring orders. Collections appear to be good generally. All lines of cotton yarns are scarce, especially the higher grades. In the woolen and worsted lines similar conditions obtain and prices have a higher tendency. Raw silk continues more or less active. Local manufacturers, however, seem to be satisfied with the outlook. Trade in shirts, waists and gloves is very brisk, and manufacturers are refusing orders for immediate delivery. Similar activity is evident in the knit-goods and hosiery industries. Collections in some cases are slow, but as a rule payments are prompt and conditions are promising. Manufacturers of women's hats have had a very satisfactory spring season and are booking fall orders. Artificial flowers continue free sellers, and jobbers and retail milliners are doing a good business. The cloak and suit trades are exceptionally busy, manufacturers working overtime to keep abreast of orders, and out-of-town buyers are numerous. Collections are good. Wholesale notions are also very active, business is up to expectations and obligations are being promptly met. Button manufacturers are working to the limit of their capacity. Prices of rags and shoddy continue firm, but the volume of business transacted is of small proportions. Wholesale grocers report a small decrease in sales, but retail business is very active. Though Easter orders for confectionery have been filled manufacturers are still busy, prices are firm and collections fair. Receipts of eggs are very large, but there has been only a fractional drop in price. During the month a considerable quantity of poultry was exported. Business in dressed meats and live stock is very active, and prices are very firm. Demand for flour has declined in sympathy with the weakness in wheat. In the hardware, cutlery, tin and enameled ware, woodenware and china and glassware trades business continues undiminished, and fully equals that of last year. Complaints, however, of slow collections are heard. Buyers of pig iron are cautious in placing orders for future delivery, while furnacemen are not making concessions to obtain business. Metals are not so strong, and copper has declined. Machinery dealers report a fair amount of orders, but say collections are slow. Oakum is in good demand, and business in jute cordage is very brisk. American hemp twine is firm, and there is a good

market for cotton duck. Crude rubber has a downward tendency. In the leather trade buyers are purchasing only for immediate needs. Retail shoe houses report an active and full Easter business. Jewelry also felt the stimulus of Easter buying. Importers of diamonds are reported to be persistent buyers abroad, as they have the fullest confidence in the future. There has not been any marked improvement in furniture collections, which continue slow. Building contractors generally are not busy, but some of the larger construction companies have important contracts on hand. Speculators are showing some signs of spring activity, but the number of plans filed is not so large as is usual at this season. Within the past fortnight several operations were sold at foreclosure as a result of builders being unable to carry their properties. Business in lumber and building materials shows an increase, but deliveries are still delayed. Prices are very firm. Collections in the paper trade are from fair to good, and demand is steady.

The following telegrams show trade conditions at the cities mentioned for the week ending March 29:

BOSTON.—Dry-goods jobbing is strong, and with scarcity of stocks in many departments, prices are advancing to higher levels. In cotton cloth, deliveries by mills are so generally backward as to create scarcity, and those holding stock are obtaining extra prices. Cotton goods in all lines are very firm. In manufactured women's suits and cloaks an extended strike among operators is in progress, and deliveries are checked. Men's furnishing goods are very active and sales large. In the paper market a strong tone is apparent in both manufacturing and jobbing circles. All classes of paper are firmly held and buyers and sellers seem confident. The situation in paper stock is satisfactory. Collections of stock in many lines have been reduced the past month or so because of bad weather. The movement in foreign rags is on a slightly larger scale, owing to a better demand from manufacturers. Dealers in house-furnishing goods are doing a fair business, but collections are exceptionally slow. In paints and oils more activity is shown. Glass is in better demand, and in all lines of painters' supplies stock is moving better. Lumber orders are plenty in some lines, but the delay in transportation continues, causing much complaint, especially in southern goods. In other lines of builders' supplies, especially in bricks and cement, orders are coming in well, many important building contracts being under consideration. No change in coal market. There is a fair demand for all grades of liquor and an increasing demand for beer and ale. Collections are rather slow. There is no material change in leaf tobacco. The demand is fair, but shrewd dealers and manufacturers are inclined to purchase in small quantities. The last week of Lent is generally the quietest of the year in the provision trade, and this year is no exception. The egg market has displayed unlooked-for strength, but, in the opinion of many operators, prices are higher than conditions warrant.

PROVIDENCE.—Business in jewelry is rather quiet. Textile manufacturers report a large volume of business, though along some lines labor matters are somewhat unsettled. There is little improvement noticed in lumber and other building materials. Collections are fair.

PHILADELPHIA.—Trade is quiet in wool, prices show little or no change, and manufacturers, generally speaking, are well employed. Dry-goods jobbing trade reports a fair output, but collections do not improve. Flour prices rule weak and business is draggy. Chemicals and dyestuffs are in moderate demand at high prices. Paints and glass are a trifle more active, and the market rules firm. Lumbermen report a good month, with prospects for a continuance of active business at high prices. Collections are reported slow. Hides and skins are firm, with fair demand. Glazed kid continues firm, with demand quiet; prices high for raw skins, and continued high prices for finished product. Leather is firm, and high prices prevail. Tobacco inquiries increase, as well as sales, and collections are improving. Liquor sales are somewhat better; collections are slow. Pig iron is in quite as active demand and prices as strong as at any time, early deliveries being much needed. For the latter part of the year there is an element of uncertainty, but slightly more inquiry, and prices are not as high as those obtained early in the season. Finished materials are a shade less active, but the mills have orders sufficient to occupy them. Coal trade is fair, prices are steady and prospects encouraging.

PITTSBURGH.—The output of the mills and furnaces in the Pittsburgh district continues at a record-breaking tonnage, and the strength of the iron and steel market is well maintained. During the week 1,000 tons of basic iron were sold at $21, valley furnaces, for second-half delivery, and the same amount of Bessemer at average prices. There have been a good many inquiries for second-quarter iron, though it is said there is none to be had. Coke is in plentiful supply and prices are easier. Spot prices for pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $3 and foundry coke at $3.80. The general trade situation continues satisfactory, and prospects are regarded as being quite favorable.

BUFFALO.—General business is fully up to normal and compares favorably with one year ago. Dealers in staples report good orders and the outlook generally is encouraging. Collections are fair to slow.

BALTIMORE.—The volume of business done by dry-goods jobbers during the first quarter of 1907 shows an increase, which would have been larger had they been able to fill all orders received. A feature this week has been the number of New Yorkers in this market endeavoring to buy up some local stocks. Prices continue firm and goods scarce, with collections only fair. In shoes, while the aggregate of sales about equals that of 1906, the number of orders have not been so large, owing to high prices. This week business in this line has been fairly brisk, with values steady and collections slow. Other lines showing an increase for the three months' period are overalls, shirts, umbrellas and parasols. New business in harness is brightening up. Wholesale paper is brisk at firm prices; manila continues very scarce; collections are fair. Brush manufacturers are working full time. Prices are firm, in sympathy with raw materials, deliveries of which are slow. Leaf tobacco is very firm, but collections are slow. There are a few clothing buyers on from Virginia and West Virginia, but business for the first quarter of 1907 will not equal that of 1906, and would have fallen shorter but for belated spring purchases. The bank statements as of March 22 reflect scarcity of money, but with the April settlements an easier market is looked for. The rate continues strong at 6 per cent., and all demands on bankers have not been met; this applies to regular customers. Quite an amount of capital is temporarily tied up in grain to be exported.

CINCINNATI.—General business shows marked improvement. Money is abundant.

DETROIT.—With favorable weather retail merchants in all lines report a record trade in Easter apparel, the demand generally being for a better grade of merchandise than in former years. Industries continue well employed, manufacturers in some lines being forced to overtime to keep pace with orders. The realty market is active. Building trades continue fully employed, and demand for lumber and materials is active, with prices well maintained. Jobbers report country trade to be of a fair average for the season, with collections in proportion. Slow remittances are, however, noted from some sections, bad roads being cited as a partial factor.

CHICAGO.—Trainmen and conductors on forty railroads voted to strike to enforce demands for an increase of 12½ per cent. in wages and for a nine-hour day. Railway managers offered 8¼ per cent. increase and a ten-hour day. The men have had no increase since 1893. Wages average $133 monthly for conductors and $72 for trainmen. Trackage covered, 95,000 miles. If the strike occurs over 500,000 employees will be involved, directly and indirectly. Directly concerned are 15,000 conductors and 35,000 trainmen. The defense fund of the trainmen amounts to $375,000 and that of the conductors to $350,000. The railroads offered to arbitrate, and asked Chairman Knapp, of the Interstate Commerce Commission, to act in that position under the Erdmann act. The feeling grows that there will be no strike. No cancellations of orders for steel rails or of general finished steel have been received. Other points say 20,000 tons will cover cancellations to date. General business is good in all lines, but shows evidence of slowing up. Reduction in new committments in general lines of trade is becoming more conspicuous. The Western Electric Company has laid off 1,800 men of late, owing to a slowing up of special work. Other interests are getting out orders as fast as possible. Spot pig iron is in better demand and prices are stronger. Futures are always wanted at former prices. Structural material has received fair support and the general steel market is strong. Specifications are coming in at satisfactory rate and round lots of steel bars have been placed for delivery in the second half. Consumption of other materials keeps up to the ability of the mills to produce. Coal is meeting with fair sale and prices are easy. Consumption of wire and wire nails is unprecedented. Large contracts for pipes have been let, aggregating over 7,000 tons, mostly to local interests. Lumbermen report increased buying and a strong market. Dry goods houses have a fair trade, but it is tapering off gradually. Sales of clothing and shoes are good. All other lines are in moderate request. Retail trade is good. Butter and poultry have advanced, while eggs and potatoes declined. Prospects are for a continued liberal movement of all goods. Fall sales to date are satisfactory. Money is in strong demand. Banks are closely loaned up and have lost heavily in deposits and cash resources. Collections are fair.

PEORIA.—Trade is only fair, and jobbers report collections slow. The weather has been extremely warm.

LOUISVILLE.—Wholesale trade shows marked improvement in leading lines, due to open weather and the large number of buyers attracted to the city by the Greater Louisville Exposition; retail business was also enlivened appreciably. Business is of a satisfactory volume in dry goods, drugs, hardware and stoves. The market for straight whiskey is a waiting one, with prices firm. Wholesale whiskey dealers report trade holding up very well for this time of year. Collections are only fair.

ST. LOUIS.—Manufacturers and jobbers in all lines continue to report a good volume of business, and the prospects for the immediate future seem to be good, although there is some anxiety in regard to the railroad situation in connection with the proposed strike. It is generally the opinion that if matters in this direction culminate unfavorably it will be the beginning of a long and dull season. Retail trade in all lines, especially with the department stores, is considered the largest for many years at this season, which, as a matter of course, is due to hot weather. Local bankers feel more hopeful over the money situation, and believe that unless something unforeseen happens the worst is over for the present at least.

KANSAS CITY.—Trade in all leading lines exceeds that of previous seasons. Retail trade is excellent, having been stimulated by the season's demands and favorable weather. Collections are good.

MILWAUKEE.—Gradual expansion is reported in jobbing and retail lines under favorable weather conditions. Collections are fair.

SIOUX CITY.—Grocery and hardware jobbers report business increasing. Material for building is in good demand. Retail trade shows an increase over last year. Collections are fair.

DAVENPORT.—Retail and wholesale business is good. Manufacturers are busy. The weather is unusually warm. Collections range from fair to good. Money is in strong demand.

LINCOLN.—Trade and collections continue fair.

ST. PAUL.—Business is very good in most lines and sales are considerably in excess of last year's. Collections are giving rise to considerable anxiety as they do not keep pace with the increased volume of business, and very little relief has been felt in the backward accounts of last year. Considerable pressure is being used, but to no avail. Many orders are being held until some reduction is made in overdue accounts. Flax and wheat are commanding good prices in the country. Because of this and the approach of seeding time, relief is looked for.

MINNEAPOLIS.—Jobbers report business excellent and in excess of last year's. Collections are improving. Flour production is of fair volume, but trade is quiet.

OMAHA.—Mild weather has greatly stimulated retail trade. Jobbers in dry goods, hats, caps, drugs, hardware, groceries and agricultural implements report sales considerably in excess of a year ago. Collections are only fair.

SIOUX FALLS.—Trade is good and collections are fair to good.

CHARLESTON.—Wholesale trade is quiet, but retail trade is good. Collections are slow.

RICHMOND.—As a jobbing center for railway and machinists' supplies Richmond is constantly growing in importance. Dealers in this line have had the most satisfactory season in their history. Manufacturers of piping and some other kindred supplies are withholding prices, as the output of their factories is sold several months in advance. In this line collections generally are backward. Wholesale dry-goods dealers have spring shipments well under way and some reordering is noted. Small shipments of leaf tobacco continue coming in; prices are good. Manufacturers of lumber throughout Virginia and North Carolina are busy, and in practically all instances mills are working at full capacity; prices continue high, and large foreign shipments are being made. In Virginia spring oats and corn are being seeded, and in North Carolina planters are preparing for an increased acreage of cotton and tobacco commensurate with the labor that is obtainable. Distributive trade in all lines is materially hampered by slow and inadequate freight facilities. Warm, fair weather and the approach of Easter have given tone to retail trade. Collections in most lines are backward, and requests for extensions are occasionally received.

AUGUSTA.—Jobbers appear satisfied with present volume of business and report collections improving. Retailers are having an excellent Easter trade.

ATLANTA.—Trade continues practically unchanged from last week without any particular feature.

BIRMINGHAM.—Southern foundry No. 2 pig iron for spot delivery is quoted at $23. Demand is strong; trade in general is not quite so strong. Collections are fair. This district is in a prosperous condition.

MOBILE.—Delightful weather stimulates Easter shopping. Retailers report large sales, while progress being made in the farming district is entirely favorable. Jobbers are doing all that they expected, with collections meeting anticipations. The general condition of the surrounding country is believed to be good.

MONTGOMERY.—Sales for the season are only fair. Jobbing business has suffered some on account of last season's poor cotton crop in some sections. Wholesale and retail traders report collections very slow.

CHATTANOOGA.—Trade conditions are satisfactory and collections are fair to good.

MEMPHIS.—Warm weather is stimulating demand for seasonable goods, and business shows improvement. Collections are slow. The car shortage still delays the movement of cotton and lumber.

NASHVILLE.—Jobbers are doing a fair volume of business, with collections fair. Retail trade is fair, and the outlook for spring business is good.

LITTLE ROCK.—Unusually warm weather for this season of the year and the approach of Easter have caused large demands for wearing apparel. All other lines show a large increase. Collections are moderate.

NEW ORLEANS.—General trade is not so good as it should be, but conditions appear to be all right. Jobbers in most lines report moderate sales and fair collections. Department stores are having an excellent Easter business, but otherwise find trade disappointing.

FORT WORTH.—Trade is fairly active.

DALLAS.—Business in all lines is active, especially with retailers. Collections are fair.

WACO.—Jobbers report a fair volume of business, but collections are slow.

SAN FRANCISCO.—Storms continue to damage crops and traffic is severely hampered. Eventual benefits will counterbalance losses. The removal of height restrictions has accelerated reconstruction. Money is low.

SEATTLE.—The threatened labor strike in building has been settled and confidence restored. Hardware is in good demand, with prices firm. Wheat and flour stocks are exceptionally low, and in this and the lumbering line the present car shortage is severely crippling. Collections are good.

SPOKANE.—Trade in general is fair. Demand for labor is heavy. Collections are only fair.

TACOMA.—Washington heads the list of states for the amount of new trackage under contract.

PORTLAND, ORE.—Lumber mills have resumed operations, with about half force. Building operations continue unabated. Real-estate transfers are numerous at prices based upon income. General trade conditions are excellent.

TORONTO.—The movement in all lines of retail and wholesale trade here is exceedingly heavy. The demand for spring goods is active, particularly as deliveries in many lines have been light. This is more particularly the case in dry-goods lines. The sorting trade is quiet, owing to the fact that orders have not been well filled on account of slow deliveries. Values in all lines are very firm. Collections, on the whole, are fair, but for some time

they have been slow. Wholesalers here say those from Ontario have shown up better than from any other province. It is a fact, however, that ready money is in very great demand here and that it is unusually scarce. This is generally attributed to the fact that the rapid expansion of the country's industries has, to a great extent, scattered among all classes of the community the money that in less active times lies at the banks. The relief to be afforded by the release of western grain in the near future will likely prove considerable. There is a brisk trade moving in all lines of hardware, although the heaviest movement will begin with the opening of navigation. Values are firm. Groceries are moving fairly well. Hogs are very firm. The market for cattle is also showing a better tone. Hide and leather prices are steady.

MONTREAL.—As stated a week ago, payments for some time have been more or less dilatory, but some measure of improvement is noted. Those from the west are coming forward more freely, and eastern returns are also better. General trade is healthy. Retail trade is normal, and wholesalers are busy sending out delayed orders of spring goods and looking after what sorting orders are coming forward. In all lines of trade these sorting orders are fair. In the dry-goods trade they are inclined to be a little light. Manufacturers' slow deliveries continue a source of worry. It is reported that certain lines of linens cannot be delivered until January, 1908. The entire hardware trade is active, and nearly all lines are meeting with a heavy demand. Iron and steel are unusually active for this time of year. For small general lines of hardware the demand is about normal, but the great amount of railway building which is going on in the country is responsible for great inquiry for steel rails. Canadian mills will hardly be able to cope with this demand. All Canadian roads are also in the market for large quantities of rolling stock. There will be a big movement of heavy goods upon the opening of navigation, and this will, to some extent, relieve the western need for many lines of goods. Country trade is a little quiet, owing to spring roads.

VANCOUVER-VICTORIA.— General trade here is active. Wholesale trade is profiting from the arrival of goods which have long been delayed by freight congestion. This factor is resulting in the distribution of much-needed merchandise, and, to some extent, the relief of the money market. The lumber trade continues very active, with prices firm. Mining and other provincial industries show steady expansion. Collections are generally fair to good.

WINNIPEG. — General trade shows increased activity in all lines, although considerable effect is still felt from the slowness of deliveries from the east. Dry-goods jobbers, on this account, are behind on their deliveries to the country. Collections are still a little slow, but they are showing improvement. A big summer trade is looked for in all lines. Building operations are to be carried on to an unusual degree in all directions, and railroad building will be extensive. A large number of immigrants are already coming in, and the year's total immigration is expected to break all records.

Money Market.

Last Saturday's unexpectedly adverse bank statement was lost sight of owing to the fact that £325,000 in gold was engaged last Monday in London for New York account, and of the still more important fact that the Secretary of the Treasury decided to place a substantial amount of customs receipts on deposit in New York banks, coupled with the arrangements elsewhere described, which would facilitate the redemption of 4 per cent. bonds belonging to national banks. As a result, the New York banks are estimated to have gained fully $12,000,000 cash this week, practically all of it being from the Treasury. These conditions were reflected by a decided easing in call-loan rates, notwithstanding the fact that there was a good deal of variability from day to day in the latter. Preparations for the April 1 disbursements also had an influence, but while as high as 14 per cent. was reached early in the week, renewals were made at 4½ to 5½ per cent. later on in spite of the heavy April payments and the two days' Stock Exchange holiday. Time money, however, continues firm at 6 per cent. for all periods, and efforts have been made by some lenders to secure a slightly higher figure. Commercial paper remains very dull, with only a limited out-of-town buying demand.

New York Banks.

Several surprising features were displayed in the New York Clearing House statement for the week ending last Saturday. In view of the continued liquidation in the stock market, a large falling off in loan account was naturally expected, and the actual decrease of $3,587,000 shown in the average of that item was far below what could have been legitimately looked for. In the same way, the increase of only $1,218,000 in the cash seemed a peculiar result in view of the fact that the lowest estimate of the actual gain in cash on the part of the banks was in the neighborhood of $5,000,000 or more. No lucid explanation can be given for these results, the general impression, however, being that they were due to the shifting of balances between institutions, which would be incident to such a perturbed stock-market situation as had existed during the week. The deposits decreased $1,829,000, which was about $500,000 less than the amount called for by the above-mentioned changes in the cash and loans, so that the surplus reserve increased only $1,676,350. The figures of the statement compare as follows with those of the preceding week:

	March 23	*March 16*	*Changes*
Loans	$1,049,989,600	$1,053,576,600	D. $3,587,000

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending March 28 shows an aggregate of $3,063,262,000, as against $3,835,747,000 last week and $2,582,230,000 in the corresponding week last year. Canadian clearings for the week aggregate $78,639,000, as against $86,238,000 last week and $61,654,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	March 28	*Inc.*	*Dec.*	*March 21*

Foreign Exchange.

In the opening days of the present week foreign exchange rates at New York exhibited a rather violent break, the actual quotations for demand sterling declining on Monday from 4.83.75 to 4.83.20, with a further temporary concession on the succeeding day to 4.82.95. The principal reason for this movement was the free offering by bankers of bills drawn against foreign purchases of securities in the American market. The notable incident of the week was the engagement on Monday of £750,000 in gold at London for shipment to New York, which was naturally accepted as indicating that the Bank of England had practically withdrawn further opposition to the taking of gold for New York in the London market. As the week progressed, however, the easier tone of the local money market produced its customary effect on exchange rates and there was a moderate recovery from the low level, demand bills on London rising to nearly 4.83.50, while the market was quiet and the volume of transactions somewhat restricted.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.83 95@4.84; commercial bills, 5.26⅞ less 1-32@5.23⅛ less 3-64; francs, 5.26¼ less 1-32@5.23⅛ less 1-16; reichsmarks, 93 3-16@94 3-16 less 1-32.

The Bank of England's discount rate is unchanged at 5 per cent. Its statement for the week showed a loss of £1,137,000 in gold, and the percentage of reserve fell from 44 per cent. to 40.95 per cent. There was also an increase of £1,206,000 in the market's borrowings from the bank. In the London open market money continues firm, call loans being 3½@3¾ per cent. and discount 5 1-16@5 per cent. The rate of the Bank of France is 3½ per cent., and the Paris market quotation the same. The bank this week lost 6,250,000 francs in gold. At Berlin the bank rate is 6 per cent. and the market 5⅝ per cent.

New York Securities Market.

Renewed weakness of an irregular kind was seen in the New York stock market early in the week, but later on the tone became firmer and a fairly general recovery set in, with rather excited buying and advances on Friday. The factors influencing speculation were decidedly varied. There seemed to be more or less further belated liquidation, and conditions in the foreign markets were also uncertain, there being rumors of further trouble on the continent, while London was for a time disturbed by very heavy selling of American securities, especially Canadian Pacific and Erie shares. More or less stress was laid upon the attitude of the national administration toward railroads. The various 2-cent fare bills, as well as the public utilities measure under discussion at Albany, were also considered unfavorable, while, although denials are put forth that a wholesale curtailment of railroad improvement work is intended, it is urged that a movement of that kind may be sufficient to produce an adverse impression on other lines of business. The threatened strike of western railroad employees was another matter which received consideration. The market, on the other hand, also had some favorable elements to cheer it. The most prominent of these was the announcement that Secretary Cortelyou would deposit $14,000,000 of customs receipts in New York depositary banks, and would, furthermore, facilitate the redemption of the 4 per cent. bonds, these steps having a good effect upon the money market. There was a good deal of talk about an alleged powerful pool which had been organized to support the market, also that certain large interests had taken active steps in the same direction. These rumors, however, appeared to be rather exaggerated. In fact, the successive rallies which the market exhibited could be adequately explained

by short covering and by a continuance of investment buying of the bargain-hunting kind. The news that the Supreme Court of Minnesota had dissolved the injunction against the Great Northern stock issue had a favorable effect, but the "rights" for the new stock were quite weak, the explanation being that stockholders do not relish the prospect of having to pay in $24,000,000, being the first installment upon subscriptions. The Erie stocks were an element of weakness, although there seems to have been much exaggeration about the alleged difficulty in renewing some of its maturing obligations. Southern Railway preferred rallied rather sharply, and the fact that it commanded a premium prior to the closing of the books would indicate that there is an excessive short interest in the stock. American Smelting was one of the weak features of the industrial list, and the Steel stocks were barely steady. On Friday the market at first was very lifeless, owing to the Easter holidays abroad and the decision of the New York Stock Exchange to close to-day. By the afternoon it, however, developed decided strength on bear covering, particularly in some of the railway stocks, especially Canadian Pacific.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Mar.* 22, 1907	*Mar.* 15, 1907	*Mar.* 23, 1906
American	4,024,400	4,081,496	3,301,974
Other kinds	1,363,000	1,362,000	1,487,000
Total	5,387,400	5,443,496	4,788,974

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Mar. 22, 1907	*Mar.* 15, 1907	*Mar.* 23, 1906
Great Britain and continent	2,886,000	2,975,000	2,316,000
Egypt	215,000	220,000	181,000
India	724,000	690,000	967,000
United States	1,562,000	1,558,000	1,325,000
Total	5,387,000	5,443,000	4,789,000

Boston Wool Market.

The market is extremely quiet; in fact, there has been less doing than for any week in a long time. This is partly due to the very small stocks of desirable wools, but the most important factor is the policy of the mills not to purchase any more wool than is absolutely needed, even though offerings are most attractive. This tendency is almost wholly due to the prevailing high rates for money, and the same reason may be given for the cessation of contracting in the west, though it must also be said that dealers are also unwilling to pay the high prices asked by the growers. Prices are still holding fairly firm, the strong closing of the London sales having been a great surprise to the local trade and having had a great effect upon the strength of all markets on this side. Though there has as yet been little decline in prices, except for a shading in quarter blood fleeces, the opinion seems general that, had not the London sales closed so firm, local prices would have weakened in many directions. The sales of the week have been mainly in scoured wools, at about 68@70 cents for fine and 65@67 cents for fine medium, and in clothing territories at about 22@23 cents. Foreign wools, with the exception of fine crossbreds, which are scarce, have been quiet in the local market. The new wools from Arizona have cleaned up well, and those which have arrived here have shown up very well.

TOBACCO IN THE PHILIPPINES.

Hamilton Wright, writing for the *Scientific American*, points out that, "despite the many drawbacks in cultivation and curing, a very fine grade of tobacco is produced in the Philippines. At the Hacienda San Luis of the Tabacalera Company some wrapper leaf is being raised under shade. Señor Orres, manager of the plantation, claims that it is not surpassed by any leaf tobacco in the world. Professor Lyon, of the Insular Bureau of Agriculture, believes the Cagayan valley equal to the famous Vuelta Abajo district of Cuba. But most of the tobacco is of inferior grade. It is spoiled in the curing. Even with free trade with the United States it is doubtful if tobacco of fine grade will be raised in sufficient quantities to make it a formidable competitor in American markets. It will take years to educate the people to raise and cure it properly. One-fourth the present area in tobacco with greater attention would yield better returns than the present careless cultivation.

"In contrast to the former government monopoly, to-day in the Cagayan the people own and control their own farms. In the province of Cagayan there is a population of 142,000, with 23,000 landowners. With five to a family, and excluding middlemen, it seems fair to assume that almost every farmer owns his own land. A similar condition holds good in the province of Isabella, south of Cagayan province, which includes the rest of the tobacco land. A very small plot of the best tobacco land is a small fortune to the natives. The average family lives by less than a hectare (2.47 acres) of land. The whole family helps in the work. Almost all of the working population of the valley is connected with the industry in some way or other. Though most of those engaged in tobacco production are small owners, there are half a dozen large firms operating in the Cagayan valley, the Spanish and German firms predominating. There is but one American company.

"Philippine tobacco is sold in thirty-five different countries. From Canton to Peking the most expensive and also most generally sold cigarette comes in a package of Manila tobacco put up in Austria. Manila cigars are the most popular in Japan and sell at 30 sen (15 cents American money), though the Japanese government itself maintains a tobacco monopoly. But the value of the Philippine tobacco crop sinks into insignificance when compared with the world's increasing supply and demand. The value of the tobacco manufactured in the Philippines in 1905 is estimated at $5,494,627; $892,561 worth of cigars and $14,250 of cigarettes, or a total of (manufactured tobacco) $906,811, and $1,374,892 of leaf tobacco (manufactured) was exported; $3,212,924 worth of manufactured tobacco, therefore, remained in the islands. Besides this, a presumably enormous quantity of leaf of an inferior grade was sold or traded to natives of the Philippines, who often roll their own cigars before smoking. When manufactured in other countries the unmanufactured tobacco brings from thirty to fifty times its selling price.

"The greatest consumers of Philippine tobacco are the Filipinos themselves. With a population of over 8,000,000, practically all of whom, even the non-Christian tribes, are incessant smokers, usually including women and children as well as men, and with many districts where tobacco is not raised for family consumption, the consumption of tobacco must be many times the value of the export. In the Cagayan a most unique custom prevails among the women, who smoke a huge cigar, the tabaco grande, which reaches a length of from thirty inches to three feet and is several inches in diameter. These huge cigars are smoked off and on for a day and a half or two days. Sometimes a tabaco grande is suspended in the middle from a rafter in the dwelling, and all the women folk of the family puff in turn. The men smoke the cigarettes or the ordinary-sized cigar.

"When the railroad projected through the heart of Luzon to connect Manila and Aparri is constructed, the tobacco industry will be immensely stimulated by the attention directed to the Cagayan. In the event of free trade the industry will profit not so much through enlarged markets in the United States (for there is always a demand for all good-class Philippine tobacco) as through the stimulus given to the importation of modern machinery and the feeling of encouragement given the islands generally."

A GREAT CANAL ALONG THE TEXAS COAST.

Frank A. Briggs, writing in the *Technical World Magazine*, says: "With the expenditure of not more than $4,000,000 the United States government can open up and connect not less than 8,000 miles of waterways having a sufficient depth to successfully carry steamboats of the Mississippi river class. Since the citizens of this country awakened to the fact that light draft navigation is the only way to develop the resources of sections not traversed by railroads, no project has been advanced or presented to the government of such far-reaching importance as the Intercoastal canal now being advocated by the states of Texas and Louisiana. The project is of almost equal importance and will benefit directly more citizens of the United States than the big ditch between the two oceans.

"It is to connect the Rio Grande river, at a point not far from the little city of Brownsville and near its mouth, with the Mississippi river at Donaldsonville, Louisiana, thereby uniting the various navigable rivers of Texas with the Mississippi river, the Ohio river, the Missouri river and all their tributaries, joining together fully 8,000 miles of streams and canals in one vast system. To one who understands the situation the proposition is a simple one, and as evidence of its feasibility stands the fact that the River and Harbor Committee has approved of the plan and United States engineers have already made surveys and performed a part of the work.

"The Texas coast is peculiar in its formation. Skirting the coast are long, narrow islands nearly the entire distance between the Mexican border and a chain of navigable bayous in Louisiana connecting with the Mississippi river. These islands form a succession of bays which are protected from the swells of gulf and into which numerous navigable streams empty. These streams are useless from a commercial standpoint, except for navigation between local points, because of the fact that they have no connection with a deep-water port. According to the surveys made by engineers, a slight amount of dredging at the mouths of these streams and the opening of the canal would make possible the successful navigation of many hundreds of miles of river in Texas alone.

"The Intercoastal canal, as projected and surveyed, would be between 600 and 700 miles in length, of which distance more than three-quarters is already navigable for vessels drawing not more than three feet, and a large part of which is of a depth sufficient to float vessels six feet in draft or more. The proposition calls for the connection of the bays skirting the coast by dredging across narrow necks of land separating them, and deepening those sections which are now too shallow to be navigated. No great feat of engineering is required—nothing but an appropriation of money and some steady, consistent digging is needed to make the canal a reality, and $4,000,000 will be sufficient to make this waterway sixty feet wide and nine feet deep.

"Back as early as 1874 the canal was advocated by Texas citizens and the attention of the Texas congressmen called to its feasibility and commercial importance. Again in 1890 it was brought up, and in 1900 those interested in it succeeded in getting the attention of the congressional committee. Unfortunately for the project, the Spanish-American war took the attention of both people and Congress, and the canal was forgotten by all except those who would be immediately benefited by it. These persons would not let it die, and now the entire citizenship of the Lone Star state is working to secure an appropriation of sufficient size to start and complete the waterway as surveyed. Naturally the coast country citizens and those living along the navigable streams of the state are more deeply interested than are those in other sections, but all are lending a hand and a voice in agitating the proposition.

"That portion of the canal running from the mouth of the Brazos river through West bay to Galveston is already open to navigation, and river boats are making regular voyages as far as old Washington, which lies 250 miles up the river. With the completion of the work already under way and provided for, boats will be enabled to navigate the river to the city of Waco, more than 500 miles from its mouth.

"It is certain, beyond a peradventure, that the great work will be carried out at some time in the near future."

AMERICAN AND FOREIGN RAILWAYS.

The General Managers' Association, of Chicago, has recently issued a pamphlet containing some general data relative to the railways in the United States and those of the leading European countries. In some instances the figures refer to the operating results of 1904, in others to subsequent years.

However, in the following study, the comparisons being compiled in round figures only, they are sufficiently accurate to be used as a basis for argument.

At the outset, it should be noted that the average freight rates on the European railways are 100 per cent. higher than those charged by the American roads.

On the other hand, the average wages received by the railroad employees in the different countries are approximately as follows: In England they are 50 per cent. lower than in the United States; in France they are 65 per cent. lower; in Germany they are 50 per cent. lower.

It should be remembered that in England, a "free trade" country, the cost of living should be lower than in countries where "tariff protection" rules, so that the wage earner over there might be almost as well off as his fellow-laborer on this side, notwithstanding the considerably smaller compensation for his work.

But the farmer, the merchant and the manufacturer in England is charged 100 per cent. more for the transportation of his goods than his competitor in the United States.

It is to be feared that the railroad employees in France, also those in Germany, are not as well off as the workingmen in the United States, for no protective regulations in either of those countries can make up sufficiently for a range of wages ruling from 50 per cent. to 65 per cent. below the prevailing wage schedule in this country.

Further, in France and Germany, as in England, the farmer, the merchant and the manufacturer is charged 100 per cent. more for the transportation of his goods than his competitor in the United States.

The following comparative table shows the volume of freight handled by the roads in the above countries, likewise the capital or cost of construction per average mile of road:

	Tons	*Capitalization*
England	500,000	$271,000
France	410,000	136,000
Germany	770,000	100,000
United States	800,000	64,000

It seems unnecessary to make any comment on these figures; however, it should be remarked that this exhibit is the more striking when considering the higher wages paid for construction work in the United States.

Each of the four countries is amply provided with all material required for the construction of the permanent way and for the building of rolling stock.

Relatively speaking, the people of the United States have considerably more railroad mileage at their command than those in either of the three European countries. In the United States the railroad mileage per capita is four times as great as that in the three European countries under contemplation.

The efficiency of the American roads is also illustrated by the following table, which shows (*a*) the volume of freight traffic per mile, and (*b*) the ratio of double-track sidings and yard track as compared with single track:

	(*a*) *Tons*	(*b*) *Per ct.*
England	500,000	130
United States	800,000	45

These figures clearly indicate the success of the scientific methods adopted in the operation of the American roads, in being able to carry 60 per cent. more freight with 65 per cent. less trackage facilities than the English roads do.

Owing to this shortage, principally in double track, it is not surprising that the managers of the American roads, knowing their needs, should urgently demand an increase in trackage and yard facilities for the more rapid handling of the constantly growing volume of freight.

Originally the cost of securing the right of way, the laying of a single track, also the acquisition of terminals in the cities, has been effected under favorable circumstances for the railways, owing to the more sparsely settled and undeveloped condition of the country. To-day, however, the conditions, especially in the larger commercial and manufacturing centers, begin to approach the state of affairs which prevailed in England at the time of the construction of her railways. In other words, it will henceforth cost the American systems much larger sums to acquire additional trackage and terminal facilities than it did to bring the roads to their present state of development.

In order to satisfy the public demand, it may cost the American roads as much to complete their property as it has cost them up to the present time. Even then the capitalization of the American railways will only amount to one-half that of the average English road.

Practically speaking, after the payment of operating expenses, maintenance charges and taxes, the remainder of income serves to compensate the services rendered by capital invested in the cost of the road and rolling stock. It is paid out either as interest on the funded debt or as dividends on the capital stock.

It is, therefore, important to compare the percentage of net earnings thus available for distribution on the capitalized cost of the railroad systems in the countries under contemplation:

	Per ct.
England	3½
France	4
Germany	6
Average of the above countries	4½
United States	4½

From this it should be inferred that in the United States the compensation for the use of capital is no higher than the average return received on the investment in railroad enterprises in those three European countries.

SOME STEAMSHIP HISTORY.

The fiftieth anniversary of the establishment of the North German Lloyd, which occurred recently, recalls the early attempts after the first application of steam to ocean navigation to establish a steamship line between the continent of Europe and the United States. The efforts of Dudley A. Man, United States consul in Bremen, resulted in the conclusion of a mail contract between the city of Bremen and the United States and the formation of an American company, the Ocean Steam Navigation Company, which started a regular line of steamers between Bremen and New York in 1847. This line was, unfortunately, unsuccessful and disappeared in 1853, but the agitation for the maintenance of a regular connection between the two countries continued, and finally resulted in the establishment of the North German Lloyd on February 20, 1857, for the conduct of steamship lines running between European and transatlantic countries, as well as underwriting and the towing on German rivers. The company started with four screw steamships built in England, and the first of these steamers, the Bremen, made her trial trip on June 12, 1858, and a few days later sailed on her first trip to New York, where she arrived on July 4, 1858. This steamship was 334 feet long by 42 feet

beam; her cargo capacity was about 1,000 tons and she carried 850 tons of coal; her engines indicated 700 horse power; her first-cabin accommodations included a long saloon, on both sides of which were the staterooms arranged for two or four persons. The first cabin accommodated sixty persons, second cabin 110 and the steerage 400.

The continued competition between the steamship lines in the development of ocean travel led to the construction by the North German Lloyd of a new type of twin-screw express steamers, of which the Kaiser Wilhelm der Grosse was the first creation. This steamer was launched in 1897, and on her arrival in New York, where she was visited by 40,000 persons in one day, created a great sensation. There followed the twin-screw express steamers Kronprinz Wilhelm and Kaiser Wilhelm II, each establishing an increase in size and speed. These three well-known express steamers will be followed this summer by a fourth, the Kronprinzessin Cecilie, now under construction in the yards of the Vulcan Shipbuilding Company, of Stettin, Germany. Her engines will represent 45,000 thousand horse power, and it is expected that she will slightly exceed the Kaiser Wilhelm II in speed. The North German Lloyd will on her completion be able to maintain a weekly service with large twin-screw express steamers between Bremen, Southampton, Cherbourg and New York.

The North German Lloyd now operates thirty-eight different lines in all parts of the world, five to ports of the United States, two to South America, one to Cuba, one to China, with a branch line and two lines to Australia, one between Australia and Japan, sixteen branch lines on the coast and among the islands of the East Indies and of China, three lines in the Mediterranean and four in Europe, besides numerous river lines in Europe and Asia. The company transported 449,243 passengers on their various lines in 1905, and in 1906 the steamships of the company ran a total distance of over 6,000,938 miles, 278 times the circumference of the earth. The fleet of the company consists at present of 395 vessels with 754,441 gross register tons and 571,670 horse power; of these, ninety-two are ocean-going steamers, fifty are coastwise, fifty river steamers, two schoolships for the purpose of training officers for the company's service, and 201 barges and lighters. The total consumption of coal on the steamers of the North German Lloyd amounted in 1905 to 1,450,000 tons, and the value of provisions consumed on the steamers was $3,750,000. The capital of the company has grown from 12,000,000 marks in 1857 to 125,000,000 marks in 1906, and the value of the floating capital of the company now amounts to about $40,000,000. About 22,000 persons are employed by the company on shore and on shipboard, and the company has established a number of pension funds and invalid funds for their employees, the total investment of which on December 31, 1905, amounted to $1,230,000.

THE COST OF GOLF.

According to *Fry's Magazine*, "there are now about 2,000 golf clubs in Great Britain, and it is generally estimated that there are about 300,000 players. Probably more new courses were made in 1906 than in 1905, and money has been sunk in them by thousands of pounds at a time. While expenditure has been on the grand scale, so have receipts. In the summer a leading club, with a famous south-coast links, took in 200 new members, getting 3,000 guineas from them in entrance fees and making them liable to it for 600 guineas in annual subscriptions. Another club took £60 in green fees from visitors in three days, and another drew £600 in the same way in August alone. So far as can be estimated, it is believed that 20,000 people who were previously non-golfers were converted to the game in 1906. What with entrance fees and subscriptions and outlay on materials, the average new convert finds his initiation costs him £10. As on the average each of these new players will spend £15 a year on the game—how happy many of us would be to get off with four times that amount!—we have secured a permanent increase in income of at least £300,000. On an average, making the very fullest allowance for a preponderance of comparatively small provincial organizations, a golf club cannot represent less than £1,000 worth of sunk capital, which means £2,000,000 for the whole country.

"We have, as stated, 300,000 golfers, and as we have suggested that the annual expenditure of each of them on the average—such annual expenditure being almost the sole income of the game—cannot be less than £15, this means 6s. a week for all and sundry, and it can hardly be possible for it to be an overestimate. This gives us a total of £4,500,000. To this has to be added the special commencing expenditure of 20,000 new players at £10 each, which for some time may be regarded as a permanent source of income. These items added together give us a sum total of £4,700,000 spent on golf in the year.

"The playing of this game has given rise to a considerable industry, and many thousands of people earn a good living through its agency. The majority of clubs employ a steward, waiters and other servants, a professional and a varying number of groundmen. An average of ten would be a very reasonable allowance for this staff, which gives us 20,000 for the 2,000 clubs. It is estimated that there are 80,000 caddies, giving us a total of 100,000 employees attached directly to the various clubs.

"Then there are at least 3,000 persons engaged in the ball-making trade, as salesmen and in various other capacities. Just see how many are needed by the great world of golf! To begin with, there are those 300,000 golfers. It has been reckoned that at the height of the summer golfing season, when the players are busy everywhere, not less than 500,000 balls are used up every week. This, indeed, seems to be a most reasonable estimate. It was semi-officially stated in June that one firm of makers, and that not by any means the biggest, was working night and day, and turning out 100,000 balls a week. Taking the whole year round, if you say one ball a golfer a week, that is surely a very modest reckoning. At that rate we have a grand total of 15,000,000 balls used up every year by the British golfers on British links. Fifteen millions!"

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 6, 1907.

The Secretary of the Treasury, Mr. Cortelyou, has this week announced his plans for the retirement of the United States government 4 per cent. bonds which mature on July 1. As was expected, the plan involves the refunding of a portion of the issue into the 2 per cents, this being, in fact, a necessary portion of the programme, in view of the undesirability of causing a drain on the Treasury. At the same time the plan seems designed to release a fairly large amount of government money for use in the loan markets of the country at a time when the interior demands for crop-moving purposes will be about to develop, so that pressure for funds on that account will be lessened. There are some $97,400,000 of the 4 per cents outstanding, and under the announcement $50,000,000 of these may be refunded into the 2 per cents, the terms in that connection being that bonds may be surrendered on and after April 5 and received at a valuation equal to their present worth to yield an income of 2¼ per cent. The 2 per cents will be issued in exchange at a premium of 3 per cent. These arrangements do not interfere with the redemption offer of March 14, which was to pay off $25,000,000 of the 4 per cent. bonds at par, under which $14,042,000 had already been redeemed up to the middle of the present week, leaving $11,000,000 more to be taken up under this offer. If the latter amount should come in, and if the $50,000,000 referred to above are refunded into 2 per cents, there would still be $36,000,000 to be redeemed on July 1, which is regarded as a fair and seasonable provision for assistance to the money market from the Treasury at midsummer. The Secretary's plans, in fact, have met with not a little approval, and constitute one of the factors which have operated to create the easier feeling in regard to money which has been noted during the present week.

A general election of delegates to the first Philippine Assembly has been directed by the President under the terms of the act of Congress of July 1, 1902. That act provided that whenever the President should be satisfied that peace had been established in the Philippines, he should direct that a census of the Philippines should be taken, and that two years after the completion of the census he should, in the event of peace still prevailing, issue an order for the election of delegates to an assembly, the order to apply to all the islands not inhabited by Moros or other non-Christian tribes. The certification of peace was received by the President on September 11, 1902, and the census returns were completed on March 28, 1905. It is understood that July 30 has been fixed upon as the date of the election. The Assembly to be elected in pursuance thereof will be vested with all the legislative power now vested in the Philippine Commission, except such as relates to the tribes located on islands not covered by the order. The Philippine Commission itself will constitute the upper house of the new legislative body. The experiment will be watched with interest, we may be sure, by other countries as well as by the United States.

To many observers not the least important development of the week, calculated to have an effect on stock-market and corporation matters, was the comparatively large majority given by the voters of Chicago at the municipal election in favor of the plan whereby the city and the street railways come to an agreement in regard to all disputed points, and make mutual arrangements whereby the local traction properties will be modernized and put in shape to provide adequate service to the public. It would seem, in fact, that the most potent argument in favor of the favorable result of the referendum was that the ordinance of the city councils was the only feasible way of providing the capital needed for the last-named purpose. The outlay of $50,000,000 to that end within the next three years will be none too small, in view of the decrepit condition of most of the Chicago street-car lines and the state of their equipment. At the same time the matter, while it has not been productive of any marked boom in Chicago Union Traction stock at the Stock Exchange, is nevertheless regarded in that quarter as an important indication as to the attitude which, after sufficient discussion and enlightenment, public opinion will take about the relative desirability of municipal ownership and the private ownership of and responsibility for utilities of this character under proper regulation and supervision.

Discussion upon the agrarian question opened in the Russian Duma on Monday after the introduction of a measure brought forward by the Constitutional Democrats. This bill provides for the compulsory expropriation of all estates above established maximums, to be determined in each province by commissions created for that purpose. Individual ownership, however, is contemplated by the bill, while a measure introduced by the so-called Group of Toil proposes the nationalization of all the land in the empire. It became clear at the outset that neither measure will receive the approval of the Czar. The Minister of Agriculture declared against expropriation in any form, and said that the government would insist upon the inviolability of the right of private property. He promised, however, a series of measures increasing the quantity and raising the level of cultivation of the peasants' lands. A majority of the delegates to the Duma seem to be committed to the policy of expropriation, so that the materials for a conflict are at hand in the first important question laid before the House.

Officials of the two principal companies which practically control all the telegraph business of the country are prompt to declare that the sudden and unexpected advance in their rates, announced last Monday, were made independently of each other, but the press and public are hardly convinced that such is the case. In fact, the uniformity of the advances in tolls, amounting from 20 per cent. to 40 per cent. in most cases, is such as to negative the idea that the schedules which either company was about to adopt were not known to the competing concern. However this may be, there has been not a little adverse comment, not only upon the secrecy which was observed in making the change, but with regard to the extent of the advances themselves. There is, of course, a great deal of truth in the assertion made on behalf of the telegraph companies, to the effect that the increased cost of labor, materials of all kinds, etc., has rendered the tolls heretofore charged in a good many cases absolutely unprofitable, while it is a matter of common notoriety that the long-distance telephone service is being used to an increased extent for the transaction of business, to the detriment of the telegraph companies' earnings. The recent reports of the Western Union would bear witness to this circumstance, and the same is in essentials true of the rival organization, the Postal Telegraph Company. To what extent the business community will protest against the increased cost of telegraph service is yet to be seen, but it is highly probable that not a little opposition will manifest itself. It might be observed that newspaper rates have been left unchanged at the old schedules.

Figures of circulation, which showed a decrease of a little over $12,100,000 for the month of February, took another upward turn in March, with the result that the largest total thus far recorded is reported in the statement issued on April 1. The increase for the month was over $15,600,000. As compared with a year ago the most noteworthy increases were gains of over $120,200,000 in gold certificates, over $46,400,000 in gold coin, over $45,700,000 in national bank notes, and over $11,500,000 in subsidiary silver. The other increases were trifling in amount, and there was only one small decrease. The total increment for the twelve months amounted to over $229,800,000. The aggregate circulation on April 1 was $2,906,399,868. On the basis of a population estimated by the Treasury experts at 85,720,000, this represents a circulation per capita of $33.91, a gain of 14 cents as compared with the month before and of $2.16 over the corresponding date last year, though it is 5 cents less than the point touched on February 1 last.

Announcement was made on last Thursday that the Erie Railroad Company had successfully negotiated for funds with which to meet maturing short-term obligations, composed of $3,000,000 6 per cent. notes due on next Monday, and $2,000,000 additional which are payable on July 1. The matter takes the form of a borrowing of $5,500,000 on one-year notes, the unusual feature of the matter being that these obligations are not, as is customary, in a form akin to coupon or registered bonds with interest payable at fixed periods, half-annually or quarterly, but have been discounted by the bankers who made the arrangement. Moreover, the rate of the discount deducted from the sum which the Erie Company will receive is 7 per cent., so that the notes would net investors in the neighborhood of 7½ per cent. A great deal of comment has naturally been caused by such an exceptional proceeding. It is pointed out that the fact that a company the credit of which, although not first-class, is nevertheless presumably sufficient for such an amount as is involved, has been forced to pay an exceptionally high price for money, would seem to be at variance with the improvement in the loan market, in which, as is duly noted, there has this week been a decided decline in the rates at which borrowers on collateral have been able to obtain accommodation

FAILURES FEW, LIABILITIES LARGER.

Failure returns for the first quarter of 1907 testify to the generally favorable trade conditions ruling in that period, in a total number of casualties smaller than the smallest reported in recently preceding favorable years, and the lightest total of commercial mortality, in fact, reported in that period for twenty-five years past. Liabilities do not make quite as favorable a showing owing to a few large failures which have swelled the quarter's liabilities above the preceding two years, but smaller than the 1904 total. Only two sections of country, the south and the territories, show more failures this year than last, but in liabilities the middle states, the northwest, the south and the territories show increases. In the middle states the liabilities are double those of the first quarter of 1906, but in the western group the failure damage is only about half that of last year.

In the following will be found the records of number, of assets and of liabilities for the first three months back to the year 1881:

	No. failures	*Total assets*	*Total liabilities*
1907	2,629	$20,160,445	$38,355,135
1906	2,792	16,301,616	34,962,799
1905	2,941	15,640,295	29,052,209
1904	2,866	26,424,267	47,304,132
1903	2,640	13,361,707	28,016,996
1902	3,026	16,595,651	34,231,306
1901	3,017	14,080,234	31,048,840
1900	2,695	18,784,650	37,817,421
1899	2,779	14,365,401	31,221,658
1898	3,515	19,503,993	36,198,566
1897	4,042	30,385,169	51,994,482
1896	4,512	35,152,701	62,513,926
1895	3,812	26,571,132	46,910,443
1894	3,969	26,748,770	49,085,088
1893	3,069	20,160,740	39,424,144
1892	3,207	18,204,044	35,861,749
1891	3,401	22,861,883	44,348,783
1890	3,326	16,082,202	33,814,301
1889	3,569	23,376,798	41,761,696
1888	3,953	17,936,584	34,108,679
1887	3,128	15,063,106	25,591,989
1886	3,302	15,260,630	29,996,446
1885	4,050	18,907,423	41,464,325
1884	3,320	20,465,411	39,047,121
1883	3,189	23,763,828	42,235,535
1882	2,146	15,323,591	29,010,944
1881	1,986	11,983,790	24,167,330

It will be seen that there were 2,629 failures in the first three months of this year, a decrease of 5.7 per cent. from last year, of 10.6 per cent. from 1905, of 8.2 per cent. from 1904, and of four-tenths of 1 per cent. from the first quarter of 1903, the best preceding quarter in the past generation. Liabilities for the quarter aggregate $38,355,135, an increase of 9.7 per cent. on last year and of 32 per cent. over 1905, but a decrease of 19 per cent. from 1904. Compared with the first quarter of 1903, the increase in liabilities is 37 per cent.

The detailed table by groups of states shows 9 per cent. fewer failures in New England, 3.6 per cent. decrease in the middle states, 8.5 per cent. decrease in the western group, 16.5 per cent. decrease in the northwest and 34.7 per cent. decrease in the far west. In the south and the territories the increases are respectively 5.8 and 30 per cent. over last year. As to liabilities, New England shows a decrease of 49 per cent. from last year; the western group falling off 47 per cent. and the far west 22 per cent. The middle group shows an increase of 98 per cent., the territories an increase of 55 per cent., the south a gain of 2.5 per cent. and the northwest an increase of less than 1 per cent.

New York City failures are 10.7 per cent. fewer in number than a year ago, but the liabilities are two and one-half times larger; three large failures in New York City, in fact—two of wire-manufacturing concerns and one small trust company—account for far more than the entire increase in liabilities over the first quarter of 1906.

Canadian failures for three months number 296, involving liabilities of $2,466,574, decreases of respectively 26 and 13 per cent. from the corresponding period of 1906.

BUSINESS FAILURES, UNITED STATES, CANADA AND NEWFOUNDLAND, FOR FIRST QUARTER, 1907 AND 1906, WITH ASSETS AND LIABILITIES.

States and Territories.	*No. of failures* 1907	1906	*Assets* 1907	1906	*Liabilities* 1907	1906

THE COMING HAGUE CONFERENCE.

No agreement has been reached as yet upon the question whether the subject of the limitation of armaments will be discussed at the forthcoming Hague Conference. It is understood that some discussion of the subject is likely to be had owing to the strong desire of Great Britain to have the matter considered in some form. The United States has thus far apparently reserved any expression of its views upon the matter. The government may regard it as a delicate matter to make suggestions regarding the policy of the great European nations into whose system it has never been drawn, while it may not desire to subscribe to any self-denying ordinance in respect to naval armaments. An interesting report has it that there is a movement on foot to postpone the consideration of the general question until the calling of a special conference in which only the great powers shall be represented. A revised programme has, it appears, been submitted by the Russian government to the cabinets of the principal nations with a view of reaching an agreement in advance of communication with the governments of the minor states. In some form, however, the question is sure to be heard from at the conference.

An indication of the alignments of the different powers is given in a recently issued circular note emanating, as it seems, from the Russian Foreign Office. It is announced in this document that Russia, Germany and Austria reserve the right to abstain from the discussion of questions "which in their opinion cannot lead to practical results." Under this category is apparently ranged the question as to the limitation of armaments. On the other hand, Great Britain and Japan reserve the right to abstain from the discussion of any points in the Russian programme from which, according to their views, satisfactory results are not obtainable.

The formal invitations to the conference have now been sent out. That addressed to the Washington government reached Baron Rosen a few days ago. The matter of the precise date for opening the conference does not seem to have been definitely settled, but it may be regarded as certain that it will not be later than the middle of June. Pains have been taken to avoid the risk of delay by conveying to the South American states the intimation that in order to insure an opportunity to attend the early sessions of the conference it will be well for their delegates not to await the receipt of formal invitations by mail, but to attend the opening proceedings charged with full powers to adhere to the three great treaties formulated by the first Hague Conference.

As to two of those treaties, namely, that relating to the Geneva Convention and that embodying the rules for the regulation of maritime warfare, the matter of adhesion is easy. Any nation may indicate its agreement by sending formal notice to that effect to the permanent council at The Hague. By some singular arrangement, however, it appears that the first treaty, that providing for arbitration and mediation, can only be ratified by newcomers with the assent of every power which signed the original treaty. There seems to be no objection on the part of any of these powers to the admission of the South American states among the adherents of the treaty. There appears, however, to be some doubt as to the attitude of Turkey. That power sent delegates to the first Hague Conference but did not ratify the resulting treaties, nor has it thus far indicated any intention to take part in the second conference. The dispatches say in reference to this matter that "the attitude of Turkey becomes of importance." A more negligible circumstance it would be difficult to conceive except from the standpoint of an antiquated diplomacy. It is hard to see why a nation which ratified none of the treaties of the first conference and does not intend to participate in the second one should be given a veto upon the admission of other states to the new concert of nations.

BANK CLEARINGS TOTALS VERY LARGE.

March bank clearings aggregates were very large, the heaviest by far ever recorded in that month, and exceeded by only two months in the country's history, these being the months of January, 1906 and 1907. For the first three months of the year the total is below that of 1906, but the falling off is only a slight one, and the close approach to the enormous total of last year is in itself testimony to the immense activity which characterized trade and speculation as a whole during the elapsed portion of the calendar year. Naturally the figures display irregularity, in keeping with the varying periods of quiet and of activity in the stock market, but the uniformity of the increases shown in clearings outside of the metropolis, as

compared with a year ago, is evidence of expansion in general trade and industry such as no previous year has shown.

The total clearings at ninety-seven cities for March aggregated $14,533,394,704, an increase of 24 per cent. over February, but a decrease of 2.5 per cent. from January this year. Compared with March a year ago, a gain of 12.4 per cent. is seen. New York City clearings for the month aggregated $9,562,277,803, a decrease of seven-tenths of 1 per cent. from January, but a gain of 14.1 per cent. over March, 1906. Outside of New York the clearings at ninety-six cities aggregated $4,971,116,901, a decrease of 5.7 per cent. from January, but a gain of 9.3 per cent. over March last year. A sidelight on the reasons for the expansion shown over a year ago at New York may be had when it is noted that sales of stock shares in March this year exceeded those of March a year ago by 40 per cent., though against this it is to be remembered that the par value of the bonds sold shows an increase of only 1.5 per cent. over March, 1906.

Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328
Mar	14,533	12,923	12,855	8,335	9,533	8,884
April	....	12,695	12,672	8,267	9,530	10,881
May	....	13,133	11,988	8,171	9,073	10,348

Oct	....	9,344	8,026	7,496	....	5,066	4,512	3,799
Nov	....	8,667	8,542	6,539	....	4,917	4,514	3,495
Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

Following will be found the gains or losses, by groups, shown in March and the three months, as compared with the same periods a year ago:

	March	*Three months*
New England	Increase 10.5	Increase 6.6
Middle	Increase 12.8	Decrease 4.6
Western	Increase 10.1	Increase 8.7
Northwestern	Increase 14.0	Increase 10.5
Southwestern	Increase 16.6	Increase 12.6
Southern	Increase 4.5	Increase 4.6
Far-western	Increase 7.9	Increase 12.9
Total, United States	Increase 12.4	Decrease 1.0
New York City	Increase 14.1	Decrease 5.0
Outside New York	Increase 9.3	Increase 7.1
Canadian	Increase 12.0	Increase 7.8

Clearings at ninety-seven cities for the first quarter of 1907 aggregated $41,138,268,322, a decrease of 1 per cent. from 1906. New York City's clearings for that period aggregated $26,531,458,462, a decrease of 5 per cent. from 1906; while at ninety-six cities outside of New York the total was $14,606,809,860, a gain of 7.1 per cent. over 1906. As to the decrease shown in New York clearings, it might be noted that sales of stocks (shares) in the first quarter on the New York Stock Exchange fell off 10 per cent. from 1906, while bond sales decreased 36 per cent.

Bank clearings at eleven Canadian cities for March aggregated $333,098,683, a gain of 12 per cent. over March last year; while for three months the clearings aggregated $978,533,487, a gain of 7.8 per cent. over 1906.

BANK CLEARINGS AT 114 CITIES FOR MARCH AND THREE MONTHS, 1907 AND 1906.

CLEARING HOUSES.	*March*		*Three months*

THE FIRST QUARTER IN THE STOCK MARKET.

The first three months of 1907 were in many respects the most eventful first quarter experienced on the New York Stock Exchange for over a decade past. It was, as a whole, a period of unusually heavy liquidation in stocks, of stress in money matters at home and abroad, and of agitation of the public mind regarding the railways, which seems likely to be memorable. Some old-time precedents were ignored, notable in this respect being the entire failure of the usual January boom to develop, and, again, contrary to the often-quoted saying of an old-time leader in Wall street, profitable sales by bears were seen when the period of spring activities was opening. Additionally, it might be recalled that the so-called new "granger" movement saw its highest development in the various state legislatures, in the form of legislation looking to lowered fares and restriction of railway operations, an extension of government control of interstate commerce matters, and a series of investigations of transportation affairs and rates never before witnessed. Coincidently, and partly as the result of these movements upon the minds of investors, there came evidences of a plethora of securities, particularly short-time notes of railways, offered at prices netting high returns to the buyers, and, as a natural result of this latter, the announcement by many railroads of an intention to retrench in expenditures for improvements of all kinds. Over and beyond all, perhaps, were the evidences frequently coming to hand that regular trade was being hampered by a scarcity of money and a failure on the part of the railways to adequately handle the large business offering, the result being congestion of freight and slow deliveries of merchandise such as were never before witnessed in a late winter and early spring period.

As a matter of record, and as a means of comparing the extent both of the decline and the final recovery, the following comparison is made between the high prices, most of them reached early in January, the low levels touched March 14 or 25, and the final prices of the quarter, for some of the most active trading stocks, both railroad and industrial:

RAILWAYS.	*High, Jan.,* 1907	*Low, Mar.,* 1907	*Close Mar. 29, 1907, High*
Atchison	108¼	82⅝	89¾
Baltimore & Ohio	122	90⅛	97½
Brooklyn Rapid Transit	83⅝	45¼	52
Canadian Pacific	195½	155	182¼

United States Steel	50¾	31½	35⅝
United States Steel pfd	107¼	91½	101⅛

The year began with dullness prevailing, though in the first week of January a little strength developed on a slight easing of money and a better feeling abroad. This, however, did not last, as the call-loan

rates at New York ran up to as high as 25 per cent. by January 10, and the announcement that the Pennsylvania Railroad would ask the stockholders at their annual meeting to authorize the creation of $100,000,000 new stock and an equal amount of bonds. On January 17 came the news that the Bank of England's discount rate had been marked down from 6 per cent. to 5 per cent., and at the same time the call-loan rates at New York eased off to 5 per cent. or lower. This, however, failed to stimulate the market, which took more note of the rumors of fresh stock issues by various railroad companies than of anything else. In fact, January concluded with a very narrow volume of trading and the development of not a little bearish sentiment on the part of the professional element. During February these conditions continued with little variation, although foreign exchange was weak in the early part of the month, and about $1,000,000 was engaged in London for shipment to New York. There were also announcements that various railroads had placed large bond or note issues in the foreign market, while some manipulation of a bullish kind was seen for a time in specialties like the Hill stocks and Canadian Pacific. On the other hand, apprehensions as to the effect of interference with railroad corporations by national and state legislatures assumed more prominence, and as the month progressed the weakness and the lack of support in the speculative position became more conspicuous.

With the month of March came demonstration of the stock market's weakness. Prices from the start were weak and erratic. The highly manipulated speculative favorites like Reading were the objects of sharp declines, indicative of pool liquidation, while the bears were exceedingly aggressive, attacking one stock after another. At the same time the news from abroad was disquieting. Money at London continued firm and the stock market there was weak in all departments, and consols sold down to the lowest price in forty years. Despite the weakness of foreign exchange at New York, bankers seemed unwilling to disturb the foreign situation by withdrawing gold from that center, the position abroad being rendered more difficult by an outbreak of selling in the Berlin market, the worst effects falling upon industrials. In the New York market money again rose to 6 per cent. or higher. About March 11 the market here became still more bearish in action and sentiment, and on the 13th and 14th of the month came an outbreak of liquidation on the heaviest scale, with declines which for their amount, general distribution and suddenness have not been equaled even in some of the famous panics of the past. Drops of from 20 to 37 points in leading stocks within two days were, of course, calculated to cause great nervousness, and the fear that weakness might be revealed in some quarters was aroused. Beginning with Friday, March 15, the market assumed a better appearance, the liquidation being checked, and bargain hunters appeared as buyers to some extent. Nevertheless, there was in the succeeding week not a little supplementary selling, though it was announced that the Treasury would increase the government deposits in the banks, and would, moreover, prepay $25,000,000 of the 4 per cent. bonds which mature July 1. The raising of the Bank of France discount rate to 3½ per cent., after it had been maintained at 3 per cent. for seven years, was, in a measure, offset by the action of the Treasury and the New York money market, in which call money had touched 25 per cent., receded gradually to 6 per cent., and at the end of the quarter was comparatively easy at a trifle below that figure. A sudden and violent decline in Canadian Pacific and an equally sudden recovery in the same stock were the chief features in the last days of March, though the improvement in the money position was the chief feature at the conclusion of a quarter which, as already stated, will rank as one of the most trying and exceptional three months the Wall street market has experienced in years.

A STATEMENT FROM THE WHITE HOUSE.

It is matter of common knowledge that considerable anxiety has been manifested as to the precise position of President Roosevelt in reference to current developments touching the railroads. Indeed, it is no secret that he has received a number of requests from persons of consequence in the financial world for a statement by him upon the general subject. It was supposed a short time ago that some indication of his views would be put forth in a speech to be made by him on some occasion of general interest. That he does not feel that the present situation calls for any new or special expression from him has just been rendered plain by a statement issued from the White House, in explanation of his decision not to accept an invitation from the Illinois Manufacturers' Association to deliver a speech on the railroad situation, at Springfield, Ill. He declined the invitation of the association in a letter in which he explained to Mr. C. H. Smith, its president, that he did not feel that he had anything to say at this time in a special address on this special subject.

In the White House statement reference is made to the receipt of requests for an expression of the President's views, and the declaration is made that he has given these requests the utmost weight and the most careful consideration. After fully looking into the matter, however, he reached the conclusion that there was nothing new that he had to say at this time on the railroad situation; that he did not deem it either wise or proper to say anything with a view to any immediate situation in Wall street, and that as he should only give expression to a definite and settled policy to be carried out wholly without regard to the exigencies of the moment, and as his views on the policy in question were already a matter of record, it did not seem necessary at this time to repeat them. To the different men, friendly and unfriendly, who have visited him or written to him, he has answered verbally or in writing that his words and acts spoke for themselves and needed no explanations whatever, and that he should not in his future course deviate one hand's breadth from the course he has pursued in the past and is now pursuing.

Stress is laid on the fact, however, that even a most cursory examination of what the President has repeatedly said in speech and in message will show the utter nonsense of supposing that the government has the slightest intention of taking any action which would invalidate the safety and stability of the railway securities now issued, the whole legislative programme of the President having been proclaimed again and again as one to insure the future against the mistakes and delinquencies of the past. The President has made no references in his speeches or messages to the question of the physical valuation of railroads. His position on this question is that the roads themselves will work out this problem as an item of bookkeeping, and reference is made to the fact that two roads, the Northern Pacific and the Great Northern, have already submitted figures as to their physical valuation. It is declared, however, that the President will again ask Congress at its next session for power to deal with the overcapitalization of railroads.

With the letter declining the invitation to Mr. Smith the President inclosed copies of two speeches, one made by him at Raleigh, N. C., in October, 1905, and the other delivered before a delegation of railway employees at Washington nearly a month later, together with his messages at the opening of the first and second sessions of the last Congress. He marked certain passages in these documents to indicate with more definiteness the views held by him. In a general way these views are well known. The speech to the representatives of the railway employees may be taken as a type. In that address Mr. Roosevelt said that while he would not tolerate any injustice to a railroad, he was convinced that there should be an increased supervising and regulatory power exerted by the government over the railways. He said, indeed, that he would like it exercised to a much greater extent than he had any idea of pressing at the moment, as, for example, in the matter of overcapitalization, and he added that he was convinced that the wages fund would be larger if there was no fictitious capital upon which dividends had to be paid. All of the deliverances referred to plainly pointed to a programme of government regulation which the President has steadily pursued and seemingly intends to pursue. They throw, however, no new light upon his policy, which is what those who have sought for expressions of opinion from him recently have endeavored to elicit.

EDITORIAL NOTES.

Obstacles to the proposed issue of $60,000,000 of new stock by the Great Northern Railway and the subscription therefor by the stockholders of that corporation having been removed by last week's decision of the Supreme Court of Minnesota, dissolving the injunction against the carrying out of the plan, the company has this week taken prompt action to put it into effect. To this end announcement was made on last Tuesday that the first four installments of 5 per cent. each, the payment of which had been delayed by the injunction, would be payable on April 9. This calls for an aggregate of $24,000,000 to be turned in at the office of the company on next Tuesday. It will be recalled that when the news that the injunction had been dissolved came out last week, Wall street and the money market were somewhat apprehensive lest such large payments might entail some additional pressure in the money market. Thanks to the improved conditions in the latter quarter, there seemed, however, to be no further anxiety on that score, and it is indeed argued that while some increase in the loan account of the banks may result, the money will be at once deposited in one of the institutions affiliated with the interests controlling the Great Northern Railway and thus be immediately restored to use in the loan market. In fact, it is presumable that the large amount of Great Northern stock which is held abroad or in Canada, together with the considerable proportion of shares belonging to investors throughout the interior of the United States, may tend to bring not a little fresh money to the metropolis. It may be remarked that the decision of the railway company to call up 20 per cent. of the subscriptions forthwith was probably dictated by the fact that the greater part, if not all, of the sum involved in the payment has already been spent. It is, in fact, understood that thus far the Great Northern's share of expenditure for constructing a joint line with the Northern Pacific on the north bank of the Columbia river has been borne by the latter company, owing to the Great Northern's inability to at once secure the money which must be provided by the stock subscription.

Even in the face of the varying perplexities which have recently confronted the stock market, more or less interest has been shown in the question of whether certain railway and industrial corporations would increase the rates of the dividends which they pay to their shareholders. In one case the outcome has been a confirmation of the rumors on that subject, the directors of the Atchison, Topeka & Santa Fe Railway Company having declared on last Wednesday a semi-annual dividend of 3 per cent., payable June 1, which is an increase of ½ per cent. over the amount at the last half-yearly dividend period in December, 1906. As previously noted in these columns, there has been not a little uncertainty about the policy which the Atchison management would adopt in that respect. The 2½ per cent. semi-annual dividend paid in December was an increase from the 2 per cent. rate—equal to 4 per cent. per annum—which had been maintained since the last half of 1902, and it was argued that in spite of the very satisfactory earnings and good prospects of the Atchison system, the need of money for improvements, which it in common with practically all the railroads of the country is experiencing, would be likely to render the management conservative in respect to a further increase in the dividends on the common stock of the company. On the other hand, it has been pointed out that the earnings for the current fiscal year are at the rate of about 14 per cent. on the common, and that the outlook is favorable for a continuance of heavy traffic and large revenues for the system, so that the directors cannot be deemed rash in adopting the increased rate.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Lessor's Liability—Vibration.

The Supreme Court of Wisconsin held, in the case of Wade vs. Hernell, that the lessor of a room in a building was liable to the lessee for injury to his property from vibration caused by the usual and necessary method of conducting an automobile business, for which he subsequently leased other portions of the building.

Inferior Merchandise—Damages—Price.

The Supreme Court of South Carolina held, in the case of Ellison vs. Johnson, that the recovery by a merchant of damages for the delivery of a consignment of merchandise of a quality inferior to that contracted for was not prevented by the fact that because of an advance in the market price it was disposed of at a profit.

Flat and Apartment Houses.

The Supreme Court of New Jersey, in the recent case of Tignot vs. Jackle, distinguished a flat from an apartment by saying that a flat or flat house is a building consisting of more than one story, in which there are one or more suites of rooms on each floor equipped for private housekeeping purposes, while an apartment house is either a building otherwise termed a "flat" or it is a building divided into separate suites of rooms intended for residence but without facilities for cooking.

Municipality—Street—Ultra Vires.

The Supreme Court of Illinois held, in the case of De Land vs. The Dixon Power & Lighting Company et al., that the action of a city council in vacating a platted street in order to aid defects in the title of private persons to the land embraced within the street, so as to enable such parties to appropriate and use such streets for their private purposes, was ultra vires and void, and did not aid the title of one who claimed as a grantee of the original proprietor of the land to whom the title was claimed to have reverted by virtue of the vacation of the platted street.

Insurance—Proof of Loss—Waiver.

The Supreme Court of Washington held, in the case of Thompson vs. Germania Fire Insurance Company, that where an insurance solicitor, who was asked for a policy, went to an authorized agent's office and made a memorandum of the terms, amount, description of property, duration of risk, rate and name of insured and of the company in which the policy was to be written, after examining which memorandum the agent approved the risk, there was an oral contract of insurance, and that where under such circumstances the company, within the time written contracts provided for proving loss, denied liability on the ground that there was no contract, it waived proof of loss.

Broker—Authority—Delegation.

The Maryland Court of Appeals held, in the case of Groscup vs. Downey, that an agent authorized to manage and sell property is without authority to delegate, as a matter of law, his power to sell to a sub-agent so as to make the principal liable for commissions to the sub-agent, unless the principal knew when he sold the property that the purchaser had been procured by the sub-agent. The court further held that when a real-estate broker seeks to hold the owner of a leasehold estate liable for commissions upon the entire price for which the property was sold in fee, and relies upon custom and usage to fix the amount of his compensation, a prayer upon the subject should not assume the existence of such a custom, but should require the jury to find whether it exists.

Limitations—Stockholder's Liability.

The Supreme Court of Minnesota held, in the recent case of Willius, Receiver, vs. Albrecht, that where two forms of procedure exist to enforce the superadded liability of the stockholder in a corporation, the statute of limitations commences to run from the time when suit might have been brought against the stockholder under either form of procedure. The court said that chapter 272 of the General Laws of 1899 did not repeal sections 16 and 17 of chapter 76 of the General Laws of 1878, but merely provided a cumulative remedy for the enforcement of the superadded statutory liability of stockholders, and that the two remedies being concurrent, the statute of limitations commenced to run against the cause of action at the time when either remedy became available for the enforcement of the cause of action.

Mortgage—Debt—Rents—Profits.

The Kentucky Court of Appeals held, in the case of Handman vs. Volk et al., that where by the terms of a mortgage on land it "includes all the rents, issues and profits thereof," the right of the mortgagee to have the rents and profits thereof applied to the extinguishment of his debt as it falls due is as valid and enforceable as his lien on the property, and that in an action to enforce a mortgage lien on land for eighteen notes for $100 each, due annually, where several had fallen due and nothing had been paid, the mortgagee was not bound to wait for his money until all the notes matured, but was entitled to have the property put into the hands of a receiver and the rents applied to the payment of his matured debt and accumulated interest.

Larceny—Check—Official—Evidence.

In the case of The State of Minnesota vs. Force, recently decided by the Supreme Court of Minnesota, the defendant was convicted of grand larceny in the first degree on an indictment charging that while vice-president of the Northwestern Life Insurance Company he feloniously appropriated to his own use a certain bank check for $675, the property of that company. The court held that among the proper subjects of investigation for the purpose of throwing light upon the charge alleged were the ownership of certain bank stock, the validity of its assignments to the defendant, whether the board of directors had knowledge thereof, the manner in which dividends were paid and appropriated by the defendant, the character of the company's reports, the method of bookkeeping, the defendant's connection with the company, his various operations and deals with other officers, and his contracts for salaries and commissions.

Land—Sale—Breach—Damages.

The Court of Appeals of Maryland held, in the case of Horner vs. Beasley, that in an action of assumpsit brought by a purchaser to recover damages for the alleged breach of a contract under seal, made by an agent for the sale of certain leasehold property, the contract if good as a simple contract might be treated as such, and the presence of the seal rejected as surplusage. The court held further that in a suit of the kind before it an instruction was correct which directed the jury that if they found from the evidence that the defendant acted in good faith in failing to perform the contract of sale, the plaintiff was entitled to recover only the amount of his deposit, with interest, and the expenses, if any, incurred in the investigation of the title; but that if they found that the defendant did not act in good faith, then, in addition to the aforesaid amounts, the plaintiff could recover the excess, if any, of the market value of the property at the time of the sale over the contract price. The court added, however, that evidence of specific offers to purchase property should not be admitted for the purpose of proving the value of the property.

Combination—Conspiracy—Agencies.

The case of The International Harvester Company of America vs. Commonwealth of Kentucky, recently decided by the Court of Appeals of that state, arose out of an indictment for a violation of section 3915 of the Kentucky statutes prohibiting a combination having for its object the fixing, regulating or controlling the price of merchandise, manufactured articles or property of any kind sold in the state, and fixing a punishment therefor. The evidence showed that a general agent had charge of five competing harvesting machine companies for certain counties in Kentucky and Indiana, for which he was authorized to establish and did establish separate agents for the sale of each machine at a fixed price, which was the same for each of them, at which price the local agents were each to account to the company for which he was selling, and neither was to sell outside of his territory on pain of forfeiture of his commission. The court held that the evidence was sufficient to authorize the jury in the trial court to find the defendant guilty under the statute. The court further held that while the legislature of the state had no extraterritorial power to punish crime, yet if a foreign corporation doing business in the state entered into or became a member of a pool or trust beyond the limits of the state, to fix the price of property in the state, then the crime put in motion in the foreign state became complete in Kentucky when committed there in pursuance of the conspiracy formed in a foreign state, and that that ruling applied to corporations whether organized in or out of the state.

BUSINESS NOTES.

Stock-Transfer Tax.

The receipts from the New York state stock-transfer tax law during the month of March amounted to $683,271, an increase of $255,773 over March a year ago, or 59 per cent. The increase over February amounted to $374,223, or 120 per cent. The appended table shows the returns from the stock-transfer tax by months from its inception:

	1907	1906	1905
January	$509,478	$911,321	....
February	309,048	490,498	....
March	683,271	427,498	....
April	....	560,300	....
May	....	503,571	....
June	....	424,071	$446,301
July	....	106,046	308,790
August	....	795,000	477,784
September	....	608,629	372,501
October	....	617,466	405,784
November	....	539,720	607,152
December	....	516,534	728,409
Total	1,501,797	6,500,654	3,346,721
Monthly average	500,599	571,721	478,146

Chicago's Savings Deposits.

Another high mark has been set in savings deposits of Chicago banks. They aggregate $158,991,128 in forty-two banks, an increase of $2,969,642, or 1.26 per cent., in the past two months. There has also been an increase of over $10,000,000 since September, 1906, and a gain of $30,000,000 since May, 1905, and of $40,000,000 compared with September, 1904. The figures reflect a very prosperous condition among the laboring and middle classes, who represent the savings depositors of that city. A significant factor, and that which serves to substantiate belief in sound conditions, is to be found in that out of the forty-two banks given, thirty-eight show increases in their savings accounts. This indicates that the ability of people to put away money is a general condition all over the city. Five downtown banks show the largest gains, while there are two in the outlying districts which compare with the institutions more centrally located. Seven banks gained more than $100,000. They are given in the following order: First Trust, $659,489; Hibernian, $464,556; Illinois Trust, $226,895; Union Stock Yards Trust, $215,292; Kaspar State, $212,196; Security Bank, $149,611; State Bank, $111,966.

Fifty New National Banks.

During March fifty banks, with capital of $2,550,000, were chartered, of which twenty-five, with capital of $1,265,000, were primary organizations; fifteen, with capital of $810,000, reorganizations, and ten, with capital of $475,000, conversions of state banks. Thirty of the banks chartered during the month were organized under the act of March 14, 1900, the aggregate capital being $775,000, and twenty under the act of 1864, the capital being $1,775,000. During the past seven years, out of the 6,383 national banks now in existence, 3,357 were organized. By geographical divisions, those organized since March 14, 1900, are stated as follows:

	Number	*Capital*
New England states	40	$5,515,000
Eastern states	556	41,751,500
Southern states	847	46,773,500
Middle-western states	941	59,117,500
Western states	772	25,926,000
Pacific states	196	15,047,800
Island possessions	5	700,000

Number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, circulation secured by bonds and by lawful money, on March 14, 1900, October 31, 1906, and March 31, 1907:

	Mar. 14, 1900	*Oct. 31, '06*	*Mar. 31, '07*
Number of banks	3,617	6,225	6,383
Authorized capital	$616,308,095	$845,939,775	$880,349,275
Bonds on deposit	241,611,570	539,653,180	550,137,900
Circulation, on bonds	216,374,795	536,933,169	547,633,063
Circulation, lawful money	38,027,935	46,238,816	49,579,000
Total circulation	254,402,730	583,171,985	597,212,063

Quarterly Review of Southern Progress.

The first quarter of 1907 presents some very interesting figures in the industrial progress of the south. In view of the adverse legislation that has taken place in many states and the tendency toward anti-corporation sentiment, there was a fear that this legislation and sentiment would be reflected in the lessening of industrial enterprises in the south, but such has not been the case. The number of new industries established in the first quarter of the current year, according to the Chattanooga *Tradesman's* review, is 1,808, an increase of twenty-four over the number reported for the corresponding quarter last year, and 395 over the number reported for the same quarter in 1905. "There are those who have been under the impression that the timber interests of the south were in so precarious a condition from lessening of timber supply that wood-working plants would necessarily diminish in number and character, but this has not proved correct, for the number of new wood-working industries established this quarter was 364, an increase of eighteen over the same quarter last year. The mines and quarries likewise increased, the number per current year being 112, as against 104 last year. In new compresses and gins there is a loss of one only, there being forty-nine this year, with fifty reported in 1906. The miscellaneous list shows a still larger increase, indicating much greater diversification, the number under this head aggregating 542, while the number last year was 467. In the states that have made this showing Texas leads with a gain of 119 over its record for last year, while West Virginia loses twenty-seven; Virginia gains sixty-three, due, it is believed, largely to the Jamestown exposition. Tennessee loses sixty-seven, Oklahoma gains ten, South Carolina loses twenty-seven and North Carolina gains twenty-eight; Mississippi has precisely the same—sixty-nine—while Louisiana loses twenty-seven and Kentucky gains sixty-four; Georgia loses fifteen, Florida thirty-four, Arkansas twenty-eight, Alabama twenty-eight and Indian Territory sixteen."

New York Stock Exchange Transactions.

Transactions in stocks on the New York Stock Exchange for the month of March aggregated 32,250,842 shares, the largest total of any month since January, 1906, when sales amounted to 38,547,868 shares. As compared with the previous month, transactions increased 15,767,690 shares, and 12,920,893 shares as compared with the corresponding month last year. The heaviest day's trading occurred on March 14, when the sales were 2,565,070 shares, the largest total on any day since August 20 of 1906. The smallest total was that of the 21st, when only 636,799 shares were dealt in. This gives transactions since the opening of the year:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
Total	71,748,791	139,166,000

The following table gives the total transactions in stocks for March and since January 1 this year, as compared with the corresponding periods in each year back to 1900:

	March	*Three mos.*
1907	32,250,842	71,748,791
1906	19,329,949	79,565,306
1905	29,062,450	75,192,896
1904	11,418,972	32,226,197
1903	15,020,632	41,954,742
1902	11,954,672	39,668,762
1901	27,001,677	79,090,669
1900	14,447,287	34,518,657

This table gives the comparative transactions in bonds—par value:

	March	*Three mos.*
1907	$53,958,500	$139,166,000
1906	53,133,900	218,315,000
1905	104,154,200	355,665,250
1904	46,770,500	162,690,700
1903	51,880,500	184,335,700
1902	66,952,200	245,175,200
1901	132,401,020	330,903,770
1900	68,916,640	161,417,640

A Word to the Small Investor.

The current *World's Work* contains a timely article entitled "Luring the Small Investor Into Speculation." It points out that one of the most alluring things in the average prospectus offering new inventions to the public is the statement that the Bell Telephone stock bought for $50 could now be sold for $100,000. The statement is based upon a strange mathematical computation, whereby the small original capitalization of the Bell Telephone Company of America is credited with all the property of the present "Telephone Trust," so called, without allowance for all the money that has been put into it since. Then the writer of the article to which we refer says: "Whenever you happen to meet with a prospectus in which that statement is made, be sure that the promoters are trying to make you think that every $1 which you put into its stock has a chance to become $2,000. Apply to the statement the simplest kind of multiplication, and see where it lands you. Just multiply the par value of the company's stock by 2,000. In the case of a concern with a capital stock of $1,000,000, it means that this stock may be worth $2,000,000,000. Then remember that an industrial company should earn from 5 per cent. to 10 per cent. on its market value, and you will see that the earnings would have to amount to, in this instance, nearly $200,000,000 before the claim could be made good. When you have analyzed the statement in this way, it cannot help but strike you as preposterous. Then throw the prospectus away and forget about it."

CURRENT BUSINESS NEWS.

Commercial.

The International Cotton Congress has issued a report showing that Europe will have sufficient cotton to keep the mills running until the arrival of next season's crop, in September, and that the cotton still due to arrive, estimated at over 2,000,000 bales, will provide an ample surplus, thus obviating any chance of a shortage or danger of a panic by opening opportunities for speculators.

The final general memorandum of the Indian cotton crop of the season 1906-07 shows that the total area in all territories reported on is 22,344,000 acres, a net advance of 1,272,000 acres, or 6 per cent. on the final figure for the previous season. The total estimated outturn amounts to 4,908,000 bales of 400 pounds, the increase being 1,482,000 bales, or 43.3 per cent. The yields of previous years were stated by Consul Fee, at Bombay, to have been: In 1905-06, 3,240,000 bales; in 1904-05, 3,818,000 bales, and in 1903-04, 3,168,000 bales. An Indian bale weighs 100 pounds less than an average American bale.

The value of iron and steel exports, excluding ore, for February was $13,946,042, an increase of $1,207,115 over February, 1906. For the eight months ended February the exports amounted to $115,603,790, an increase of $14,115,208 over the similar period of last year.

The value of iron and steel imports, not including ore, for February was $3,020,986, an increase of $1,145,813 over February, 1906. For eight months ended February the total imports of iron and steel goods amounted to $25,511,085, an increase of $7,790,003 over the similar period of 1906.

The value of copper exports, excluding ore, in February was $5,855,570, a decrease of $780,651 from the amount exported in February, 1906. Exports for eight months aggregated $61,139,457, an increase of $8,929,144 over 1906 and $6,955,761 over 1905. Copper ore exported was valued at $949,175 in 1907, $1,225,251 in 1906 and $831,452 in 1905. The imports of copper goods in February amounted to $3,553,818 in value, an increase of $1,469,750 over February, 1906. For eight months ended February imports were valued at $23,277,210, an increase of $7,253,048 over 1906.

Broomhall's foreign crop summary: United Kingdom, France and Bulgaria—Outlook satisfactory for crops; weather very favorable; rain will soon be needed. Germany—Weather continues favorable; seeding progressing. Reiterated that much abandoned wheat land is being reseeded in oats; native wheat scarce. Hungary—Late reports continue of complaints. Roumania—Weather springlike; reports of seeding variable. Russia—Weather springlike; outlook for winter wheat favorable; area estimated at 70 per cent. of last year; spring seeding will shortly commence; arrivals at ports very small; navigation reopened on Sea of Azof. Turkey—Some fears of damage to the crop. Italy, North Africa—Outlook generally favorable; rain needed in some parts. India—Crop outlook favorable; prospects for harvest fairly good.

Imports of coffee for February were 85,862,056 pounds, the value of which was $6,474,548. Of this amount 62,041,939 pounds were from Brazil, valued at $4,027,289. These figures compare with imports in February, 1906, of 66,689,631 pounds, the value of which was $6,105,175, of which amount Brazil contributed 37,973,725 pounds, amounting to $2,293,018. Imports for eight months ending February, 1907, were 647,266,151 pounds, valued at $51,869,152. To this amount Brazil contributed 537,881,221 pounds, valued at $41,109,500. The imports for the same period in 1906 were 608,473,913 pounds, the value of which was $51,728,481. To this amount Brazil contributed 471,720,935 pounds, valued at $38,677,739. The imports for the same period in 1905 were 805,246,619 pounds, valued at $63,611,712, to which amount Brazil contributed 657,705,733 pounds, valued at $50,824,046.

The Ohio state report places the amount of wheat in farmers' hands at 8,500,000 bushels, against 6,000,000 bushels last year. The government March estimate was 15,000,000 bushels. Condition of corn in crib 93, against 95 a year ago. The condition of wheat is placed at 87 per cent., against 101 a year ago, 98 in December and 99 at harvest, when the crop was 43,000,000 bushels.

An interesting illustration of the rise in prices is given in a test made by the Philadelphia Board of Education, and related by the *Public Ledger* of that city. A schoolhouse was built in Germantown in 1901 for $21,800. Recently bids were asked for a similar schoolhouse in West Philadelphia, the specifications being identical. The lowest bid was $30,094, other bids ranging from this to $35,178. Assuming that in each case the contractors understood their business, we have here an increase of almost exactly 40 per cent. in the cost of building in six years.

The extent to which American and foreign vessels figured in the carrying part of our foreign trade in February is shown in the following, exports being first considered:

	1907	1906
Domestic merchandise exports..	$157,520,225	$139,763,307
Carried in American ships.....	8,387,716	10,400,827
Carried in foreign ships	133,833,976	115,065,356
Per cent. carried in Amer. ships.	5.9	7.19
Per cent. carried in foreign ships	84.71	82.73

A similar table in regard to imports follows:

	1907	1906
Merchandise imported	$123,007,650	$104,232,879
Carried in American ships.....	15,799,201	14,726,308
Carried in foreign ships	100,309,074	82,160,558
Per cent. carried in Amer. ships.	12.19	13.46
Per cent. carried in foreign ships	81.30	78.84

The N. K. Fairbank Company estimates stocks of lard held in the United States, Europe and afloat therefor as follows: April 1, 1907, 231,312 tierces; March 1, 1907, 239,713; April 1, 1906, 241,583; April 1, 1905, 322,518; April 1, 1904, 250,688; April 1, 1903, 128,231.

Financial.

The British exchequer returns for the financial year ending March 31 show the total revenue of the United Kingdom to have been $775,182,290, an increase of $5,787,960 over the previous year. The surplus balance in the exchequer is $9,721,535.

The American Tobacco Company has purchased out of surplus funds an additional $1,000,000 of its 4 per cent. bonds, and has delivered them to the Morton Trust Company, trustee, for cancellation. This makes $2,000,000 of bonds canceled within a fortnight.

The *Journal of Commerce* gives the total capitalization of new incorporations of $1,000,000 capital or more in the eastern states during the month of March as $289,538,400, an increase of $89,677,000 over the same month of last year, but a decrease of $15,650,000 as compared with February of this year.

The United States mints during March turned out a domestic coinage of 11,140,906 pieces, valued at $6,630,894. Of this amount $5,874,525 was in gold, $326,212 in silver and $430,156 in nickels and cents. That the Treasury Department is continuing its efforts to provide an adequate supply of small coins is shown by the fact that during last month 1,036,250 quarters, 670,250 dimes and 8,503,000 nickels were minted. For the Philippine government 4,906,057 silver peso and centavo pieces, and for the Mexican government 1,955,000 silver centavo pieces, were also struck off.

Savings-bank deposits in Massachusetts amount to $220.67 per capita, with 1,908,378 depositors holding over $700,000,000, leading the world in per capita average. In New England there are 463 savings banks, or 70 per cent. of all the mutual savings banks in the country, with deposits in New England exceeding $1,200,000,000.

On Wednesday the New York Clearing House issued its compilation of the returns of New York City's national banks, under call of March 22. Compared with the statement of January 26, important changes are as follows:

Capital.....	Inc.	$3,150,000
Net profits.....	Inc.	377,100
Due banks and trust companies.....	Dec.	39,611,700
Due other depositors.....	Inc.	104,002,600
Loans and discounts.....	Dec.	40,573,100
Due from banks.....	Inc.	4,330,400
Cash items.....	Inc.	1,150,500
Specie.....	Dec.	9,605,900
Legal tenders.....	Dec.	9,265,500

The present statement compares as follows with that of January and with a year ago:

	March 22, '07	*Jan. 26, '07*	*April 6, '06*
Circulation	$52,936,200	$55,560,500	$53,160,200
Due banks and trust companies	486,443,100	526,054,800	....
Due other depositors	609,793,300	496,790,700	1,135,756,149
Loans and discounts	701,763,200	742,336,200	699,799,000
Due from banks.....	62,658,800	58,328,400	55,953,200
Total cash.....	215,811,500	234,682,900	207,831,100

According to the Berlin correspondent of the London *Economist*, the listings on the German stock exchanges during the past three years aggregated not less than £385,000,000, of which £110,000,000 was in stocks. These figures, of course, leave out of account the immense sums absorbed by industrial and trading firms and companies whose shares are not listed on the exchanges. The demand for new capital has far outrun the capacity of the country to create it, notwithstanding the extraordinary prosperity that has prevailed during the period under consideration, and this demand continues in the face of the most adverse monetary conditions that Germany has known for a generation.

At recent periods the amount of Pennsylvania Railroad stock outstanding, the number of stockholders and the average number of shares per stockholder were as follows:

	Stock outstanding	*Stockholders*	*Per stkhldr*
1898	$120,305,000	27,272	105
1899	120,305,000	24,568	105
1900	151,502,250	26,387	114
1901	203,072,100	27,540	147
1902	204,374,850	27,870	146
1903	299,991,812	30,885	194
1904	301,385,650	45,037	134
1905	302,549,360	40,424	149
1906	305,794,500	40,330	152
1907, March 1.....	311,477,250	42,104	148

The collection of customs for eight months ending with February, 1907, were $221,547,120, compared with $200,291,117 in 1906 and $175,792,437 in 1905. The increase of 1907 over 1906 was $20,956,003, and over 1905, $45,754,683.

The board of directors of the National Copper Bank, which is to open for business about May 1 in the Trinity building, will be as follows: Charles H. Sabine, Thomas F. Cole, F. W. Roebling, William A. Paine, F. Lothrop Ames, H. H. Rogers, Jr., U. H. Broughton, Adolph Lewisohn and Charles F. Brooker. There may be some additions to this list later.

The directors of the Guardian Trust Company have elected the following officers: Frank W. Woolworth, president; George W. Fairchild, vice-president; Charles L. Robinson, vice-president; Lathrop C. Haynes, secretary, and Alfred M. Barrett, assistant secretary.

The American Writing Paper Company has deferred the payment of its preferred dividend of 1 per cent. on account of a restraining suit brought by the bondholders.

On Friday, April 12, the Produce Exchange will begin trading in industrial and mining securities. A list of issues to be dealt in has been adopted by the committee in charge of this new departure, comprising 105 mining stocks and thirty-one industrials. The industrial list is as follows: American Brass; American Chicle; American Press Association; American Typefounders; Barney & Smith Car; Borden Condensed Milk; Exploration Company of New York; Franklin Mills preferred; Guanajuato Power & Electric; Hall Signal; Havana Tobacco preferred; Herring-Hall-Marvin Safe; Lord & Taylor; National Cash Register; Niles-Bement-Pond; Otis Elevator; Pillsbury-Washburn Flour Mills; Pratt & Whitney; Quaker Oats preferred; Royal Baking Powder; Safety Car Heating & Lighting; Standard Milling common and preferred, also 1st 5s; Standard Oil; Trenton Potteries; Union Typewriter common, first and second preferred; United Bank Note; Waterbury. The rates of commission for the purchase or sale of stocks shall be: On stocks selling under 20 cents per share, 50 cents per 100 shares; on stocks selling at or over 20 cents and under $1 per share, $1 per 100 shares; on stocks selling at or over $1 and under $6.25 per share, 1 per cent. of the money involved; on stocks selling at $6.25 or upward per share, $6.25 per 100 shares. The rates of commission for the purchase or sale of bonds shall be at the rate of $12.50 for each $10,000 of par value.

On Wednesday directors of the Kansas City Southern declared an initial dividend of 4 per cent. on the preferred stock, payable July 1, out of the earnings of the company for the fiscal year ending June 30 next. In a statement given out by the company it is shown that the net income for the first eight months of the present fiscal year, after meeting all charges for interest, taxes, car trusts, etc., was $1,316,365. The estimated net earnings for the remaining four months, charges deducted, are $648,647, making the estimated net income for the year $1,965,012. The amount required for the payment of the preferred dividend is $840,000, so that the company figures on a surplus of $1,125,012 for the year.

Atchison was put on a 6 per cent. basis Wednesday, the directors declaring a semi-annual dividend of 3 per cent. on the common stock, payable June 1. The increase in the dividend calls for a disbursement $1,027,000 greater than the amount required for a 5 per cent. payment and $2,054,000 more than the payments under the 4 per cent. rate maintained prior to last October. The last monthly statement of earnings showed an increase of $2,149,000 in net for the eight months ended with February.

The New York Central directors have decided to refund the $14,000,000 first mortgage Canada Southern 5 per cent. bonds maturing January 1, 1908, the terms to be made known within the week, perhaps.

It was announced at the Treasury Tuesday that $50,000,000 United States 4 per cent. bonds due next July would be immediately exchanged for the consolidated 2 per cent. bonds of 1930, and that the balance of the issue, now estimated at about $35,000,000, would be redeemed on and after July 2, the date of their maturity.

Wm. A. Read & Co.

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The London *Bankers' Magazine* says: "Short of an actual financial crisis, conditions on the London Stock Exchange during March have been about as depressed as they well could be, and certainly at no time during the past decade, and even for a much longer period, has the list shown anything approaching to the depression now recorded. In a list of 387 representative securities there was a total depreciation between February 20 and March 20 of £125,000,000, the exact figures being as follows:

Aggregate value of 387 representative securities on February 20, 1907.....	£3,816,429,000
Aggregate value of 387 representative securities on March 20, 1907.....	3,691,349,000
Decrease.....	125,080,000

The center of depression has been American railroad securities, which show a loss of £52,500,000, or about 12 per cent."

It is understood that the present plan of the management of the Wabash Railroad Company for refunding the $6,160,000 three-year 5 per cent. notes, which mature May 10, calls for an extension of the present notes and the payment in cash to holders who do not care to participate in the extension plan. The present notes are secured by the entire stock and $6,600,000 fifty-year first mortgage bonds of the Wabash-Pittsburgh Terminal Railway Company.

Governor Hughes, of New York, has signed the bill relating to the assessment of taxes on trust companies. It provides that such institutions, after paying the state tax, shall be exempt from other levies.

In a message to the Mexican Congress President Diaz says: "The currency situation has greatly improved. As against $42,000,000 that had been coined in September last, the coinage of gold has now reached almost $60,000,000 in pieces of 5 and 10 pesos. The mintage of new subsidiary silver coins now aggregates $22,000,000, of which a considerable portion represents the result of the remintage of more than $7,000,000 of the old subsidiary coins. With these additions and the additions that will be made during the next few weeks, it is hoped to satisfy the imperative and exceptional demand for subsidiary coins, due to exportation of hard pesos."

It was announced Thursday that the Erie Railroad Company had sold to J. P. Morgan & Co. $5,500,000 one-year notes. Of this amount it is understood that $3,000,000 are to be used in refunding notes of the company due Monday and $2,000,000 in refunding notes maturing on July 1 next. The notes are unlike any of recent issue, being in the nature of commercial paper, in that they are not interest-bearing, but are discounted at the time of sale. The notes were offered later by brokers at $930 for a $1,000 one-year note. These terms give the purchaser a 7½ per cent. interest. This is by far the highest return that any note issue put out this year has offered.

On Thursday Governor Johnson, of Minnesota, signed the 2-cent railway fare bill. The law will go into effect May 1.

Railroads.

In 1906 the railroads west of Chicago received $1,260,677 for transportation of immigrants, the largest sum on record.

On Friday Governor Stuart, of Pennsylvania, signed the 2-cent railway rate bill.

Miscellaneous.

Immigration into Argentina during 1906 totaled about 260,000, which is a record-breaking figure. At the rate maintained since January 1 last the 1907 immigration will reach nearly 400,000. These are small figures compared with what the United States can currently exhibit. But Argentina has a total population of only about 6,000,000, while the United States has a population about fourteen times larger.

According to a dispatch received in Berlin from Shanghai, the Chinese government has ordered, through a German firm at Tien-Tsin, 2,000,000 rifles for the uniform equipment of the Chinese army.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Despite some cross currents in demand, due mainly to the withdrawal of the Easter stimulus to trade and a succeeding spell of cold weather, the developments of the week have been mainly favorable. Chief, perhaps, of these is the final satisfactory settlement of the western railway men's demands by arbitration. Concessions by both sides guarantee that no interruption to traffic will occur. This is very important, because, despite strenuous efforts by railway managers and actual improvement proceeding therefrom, slow deliveries of merchandise are still restrictive of trade and collections. All reports as to trade at wholesale and in jobbing circles in the first quarter are in a high degree favorable, and failure returns confirm these in the smallest number of casualties for a generation past. Bank clearings for the quarter are also good, though, owing to lessened securities dealings, aggregates for the entire country are slightly smaller than the 1906 record. The money situation has shown further ease, with a favorable influence upon stock-market sentiment reflected in higher quotations for securities, but diverse views as to the permanence of the ease are expressed, banks are getting full rates from commercial borrowers, and borrowing railways have had to pay high rates to place notes. Reports from most leading industries are still of full order books and of backward deliveries. There is, however, slightly more manifest a disposition to move conservatively as regards distant positions, some easing of metal quotations and a softening of asking prices for various products, and the jewelry, shoe, leather and wool trades note quiet, pending a clearer view of later developments. Wheat-crop reports have an appearance of irregularity, due to the reported spread of insect damage in the southwest and advices of winter-killing in the central west. Still the reports from the great surplus states west of the Missi-sippi are very good, having been improved by rain. Frosts have hurt some fruit and vegetable crops, but, while checking growth, do not appear to have damaged the exceptionally well advanced cotton crop.

In the dry-goods trade there has been something like a lull in jobbing lines, now that the first rush of spring demand is over, and the course of retail trade will be closely watched. There are evidences of growing activity in out-of-door work, and lumber, hardware, paints and allied lines are more active at the west. Collections do not yet feel the impetus of payments upon business booked earlier and are irregular, being slowest in parts of the northwest and at the south. Talk of cancellations is still widely heard, but definite information is lacking as to its real extent, with the disposition manifest to minimize this feature. Now that the rush of spring business is over at wholesale, salesmen are preparing to go out on fall business, and early reports as to bookings in this line are favorable.

Pig iron is quiet, deliveries have improved, and buyers appear more disposed to defer placing contracts for second-half delivery. Although furnace interests display no marked eagerness to sell, the indications are that the price situation is easier. Incidentally, consumers are asking questions more freely as to the quality of the iron offered. Spot pig, however, is in urgent demand, and high prices still rule. The leading interest has exercised its option on 15,000 tons of Bessemer pig, although the option did not expire until May. Another lot of 9,000 tons has been taken for second-half delivery, the price being $21, valley furnace, a decline of about $1 from recent figures. Foreign iron is being laid down at New Orleans on the basis of $19.50, duty paid, which indicates more competition in southern territory. Steel billets are up $1 per ton at Pittsburgh. A paucity of steel continues at the central west. In the finished lines a heavy volume of specifications is the rule, though eastern plate mills report a little more slowness in this respect. Structural material is in better request. New business in steel rails is not very large, the biggest single order being for 5,000 tons, but considerable business is pending. The lighter lines are in heavy demand. Agricultural makers, failing to get concessions, are buying steel bars, but only for six months, instead of a year, as in the past. Demand for merchant pipe and boiler tubes is heavy. While cancellations are still talked of, it is thought that the movement has not gone far, but exact facts are not available as regards this phase of the situation. Coke is easier on full supplies, while coal, especially at the west, is weaker. Copper is quiet and lower, being off ½ to 1 cent a pound from recent quotations, on weakness in London and the indisposition of domestic consumers to pay the high prices recently ruling. Some European and Peruvian copper has been imported, and it is figured that Australian and Japanese as well as other foreign copper could be brought and smelted at a profit. It is more difficult to dispose of scrap copper.

Crop reports to BRADSTREET'S are rather more irregular. Insect damage seems to be moving northward. Texas sends bad reports as to wheat, and Oklahoma shows a lowering of condition, due to the green bug, while the oats crop is badly hurt. On the other hand, Kansas and Nebraska have been helped by rains, and the outlook for wheat in those states is excellent. Scattered reports of damage come from Missouri. East of the river there is talk of winter-killing, and conditions in Indiana and Ohio are below a year ago. Spring-wheat planting has begun in the northwest. Winter wheat in the Pacific northwest is in good shape. Heavy rains are reported to have badly hurt asparagus and apricots, but the damage to grain has been less than earlier apprehended. Some talk of damage to southern vegetables and fruits comes from the Carolinas and Georgia. The drought in Florida still continues.

Cotton-crop reports are favorable as a whole. A large acreage has been planted earlier than usual. Rains in parts of Texas have improved the prospects, but dry weather is complained of in the western half of the state. A smaller acreage in cotton is indicated in the Memphis district and in the neighborhood of Savannah.

Leather and hides are quiet. Orders booked by shoe manufacturers are not large enough to keep factories running full time. Eastern shoe shipments for the first quarter are 5 per cent. behind 1906.

Failures for the first quarter were few in number, no smaller total, in fact, being recorded in that period for twenty-five years past, while liabilities, swelled by three large failures, were larger than in any year since 1904. There were 2,629 casualties reported, a decrease of 5.7 per cent. from 1906, of 10.6 per cent. from 1905, of 8.2 per cent. from 1904, and of four-tenths of 1 per cent. from 1903, the best preceding quarter for a generation past. Liabilities aggregated $38,355,135, an increase of 9.7 per cent. over last year and of 32 per cent. over 1905, but a decrease of 19 per cent. from 1904.

Active stock speculation was the leading feature in swelling the March total of bank clearings to a height never before reached in that month and only twice before exceeded, but the gain in the country outside of New York points to active trade in all lines having made large totals possible. For three months the total at all cities is slightly below a year ago. The March total of clearings at ninety-seven cities was $14,533,394,704, a gain of 12.4 per cent. over last year, and with two exceptions, those of January, 1906 and 1907, the largest aggregate ever recorded. The gain at New York City for March was 14 per cent. over a year ago, while outside of New York the increase was 9.3 per cent. For three months total clearings are 1 per cent. less than last year; at New York City the decrease was 5 per cent., but outside of that city the increase was 7 per cent.

The stock market developed great strength this week, largely on the renewed ease of money, the urgent covering by shorts and reports of improved conditions abroad. The bond market also broadened and displayed more activity at higher prices.

Bank clearings for the week ending April 4 aggregate $3,066,959,000, a fraction over last week, but 2 per cent. under the same week last year. Outside of New York exchange mount to $1,114,477,000, 2 per cent. above last week and 5 per cent. over the corresponding week last year.

Business failures for the week ending April 4 number 137, against 166 last week, 151 in the like week of 1906, 170 in 1905, 201 in 1904 and 153 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending April 4 aggregated 3,460,872 bushels, against 2,707,566 bushels last week, 2,155,816 bushels this week last year, 886,017 bushels in 1905 and 4,446,917 bushels in 1902. For the past forty weeks of the fiscal year the exports are 134,051,917 bushels, against 105,144,572 bushels in 1905-06, 48,518,326 bushels in 1904-05 and 200,109,169 bushels in 1901-02. Corn exports for the week are 2,917,004 bushels, against 1,844,633 bushels last week, 3,103,586 bushels a year ago and 3,366,347 bushels in 1905. For the fiscal year to date the exports are 54,583,860 bushels, against 97,973,336 bushels in 1905-06 and 60,745,183 bushels in 1904-05.

IN CANADA.

Something like a lull in retail trade is shown this week in Canada, causes for this being reaction from Easter activity, a cold snap and bad country roads. Business done before Easter on spring account was good, however. There is still some complaint as to collections, though these have slightly improved in the northwest. Failure and clearings returns are in a high degree favorable. Canadian clearings for March (eleven cities) exceeded a year ago by 12 per cent., while for three months the gain was 7.8 per cent. Failures for the first quarter were 26 per cent. less in number than a year ago, while liabilities were 13 per cent. smaller. Montreal this week reports country roads in poor shape, but a good Easter trade in millinery was done. Hardware is active, cotton goods tend higher, and important harbor improvements are planned. Toronto reports that the cold snap came just too late to spoil Easter trade. Roads are poor in the northwest, and Winnipeg reports collections slow but building active. In British Columbia spring trade exceeded a year ago, while collections are fair to good. Failures for the week number 29, as against 21 last week and 17 in this week a year ago. Weekly clearings aggregate $64,226,000, a decrease of 14.7 per cent. from last week and of 10.1 per cent. from this week a year ago.

THE CROPS.

CHICAGO.—Winter wheat in Texas is damaged 50 to 75 per cent.; Oklahoma, 15 to 25 per cent.; Kansas, so far, slight. There are scattered reports of damage and of winter-killing on the lowlands of Illinois, Indiana and Ohio. Indiana will turn out about 60 to 75 per cent. of last year's crop. Oats seeding is nearing completion earlier than last year. Corn land is being plowed. Country movement of grain is moderate.

ST. JOSEPH.—The winter-wheat outlook is excellent.

CINCINNATI. — Reports regarding growing wheat continue to improve. Stories of damage to fruit by recent frost appear to be exaggerated.

ST. LOUIS.—Reports of damage to winter wheat continue, but they are scattered.

OMAHA.—Crop reports continue favorable.

DAVENPORT.—Fruits were not affected by frosts of last week.

SIOUX FALLS.—Spring-wheat seeding is now quite general in South Dakota under very favorable conditions.

INDIANAPOLIS.—Wheat outlook in central and northern Indiana is not of the best, but it is fair in the southern part.

KANSAS CITY.—Growing wheat is receiving the necessary moisture and is in excellent condition.

WICHITA.—Recent rains put winter wheat in excellent condition. The acreage is large and prospects are of the best. There is no insect damage.

OKLAHOMA.—Winter wheat has been damaged 15 to 20 per cent. by green bugs, and the same insects have ruined oats.

CHARLESTON.—Truck has been injured to some extent by light frosts.

MEMPHIS.—Farmers are busy plowing and planting. Owing to scarcity of labor and late advances, the cotton acreage will probably be reduced.

AUGUSTA.—Recent cold snap is believed to have injured fruit in some sections, but other crops are thought to be uninjured.

MONTGOMERY.—Weather conditions have been more favorable this season than last, and, as a result, crops are further advanced.

MOBILE.—This vicinity is now having unusually cool weather, which creates some uneasiness with truck farmers; otherwise the general outlook is for early and large vegetable and fruit crops. Cotton planters are making steady progress.

JACKSONVILLE. — Long continued drought threatens disaster to crops.

LITTLE ROCK. — Crops have made rapid growth, and vegetation is far advanced for the time of year. Shipments of berries have been coming in rapidly. Much cooler weather the last few days has caused uneasiness on account of fruit, which has formed.

SAVANNAH.—The hot spell was broken during the early part of the week by cooler weather and frost, and some damage to early vegetation is reported. Recent rains along the coast have enabled farmers to plant cotton. The movement shows a slight falling off, attributable to light demand for spot cotton. The acreage in this section is about the same as last year. Fertilizer people report slight falling off from last season, possibly 5 to 10 per cent.

FORT WORTH.—Rain is still badly needed for crops as well as truck. Corn is doing well, and cotton planting is progressing rapidly.

NEW ORLEANS.—Farmers are actively planting and cultivating crops, and prospects are good. Shipments of strawberries and vegetables are assuming large proportions.

DALLAS.—Good rains have fallen throughout this district, and the ground is reported in excellent condition. Corn is up and looking well. Cotton planting is about finished, and a considerable portion of it is up and in excellent condition.

WACO.—Small grain crops in this section are practically a failure, and rain is badly needed.

SAN FRANCISCO.—The loss suffered by agricultural interests from heavy rains is less than first estimated, though the asparagus crop has been almost wholly lost.

SPOKANE.—Winter wheat looks well.

TRADE REPORTS.

At New York a large business has been transacted in silks and dress goods, but in dry goods, cottons still take the lead. Collections are generally reported good. Cotton yarns continue scarce and spinners cannot begin to keep up with their orders. Woolens and worsted yarns are also scarce. Raw silk is dear, and want of sufficient help prevents manufacturers who have stock working their looms to their full capacity. In men's furnishings, hosiery, knit goods and gloves are very active, and manufacturers of shirts have all the orders they care for, but are unable to completely fill them, owing to the scarcity of some grades of goods. Prices are high and general trade conditions satisfactory. The millinery trade is active and business prosperous. Cloak and suit manufacturers report a steady business, with collections good, but in these lines also the supply of operators is not equal to requirements. Trade in rags and shoddy is practically dead. Wholesale grocers report a satisfactory volume of sales for current week. An improved tone in coffees has stimulated buying, and the steady position of sugars has caused the placing of many orders. Retail trade is of satisfactory proportions and collections continue fair. Confectioners have had a good retail Easter trade. Manufacturers are busy and no complaints are heard as to collections. Jobbers of flour are now fully stocked, and commission merchants find business dull. On very large receipts eggs declined a cent. Southern grown fruits and vegetables are now in fair supply. The cutlery and hardware trades are in a healthy and prosperous condition, business is large in volume and prices are firm. Higher duties asked on imported china have somewhat unsettled trade, as it is felt that, if enforced, they will practically shut out some goods. There is not the same eagerness to place orders for iron and steel as existed a few weeks ago. Metals are weaker and copper has declined. Electrical houses report an active business but poor collections. Prices of hard fiber cordage are not so strong, but business is more brisk and an active trade is anticipated. Cotton cordage has further advanced, goods being scarce. The real-estate market is quiet and brokers report comparatively few sales. The building trade is moderately active, but not much new work has been started. Conditions in the lumber and building-material trades are improving somewhat. Prices are strong but collections more or less slow, and deliveries are still behind, owing to inadequate transportation facilities. Dealers in paper complain of delay in getting their goods from manufacturers. Prices are firm, and in some lines a further advance is expected.

The following telegrams show trade conditions at the cities mentioned for the week ending April 5:

BOSTON. — Dry-goods commission men and jobbers are quiet after a period of unusual activity and heavy sales, but goods generally are very firm, and in some lines advances are announced. Cotton cloths in all lines are scarce, with demand very strong, and jobbers having lines of goods bought early at low prices are selling at a profit under present prices in the primary market. Dress-goods sales to the local manufacturing trade are temporarily checked by a strike among garment makers. The season's business in dress fabrics has been exceptionally large and values are firm. Jobbing trade in men's furnishings, hosiery and underwear is very active and of large volume. Conservative business methods and higher money continue to restrict the shoe and leather business to immediate wants. Supplementary spring orders are disappointing, and wholesalers are delaying their fall orders. Some shoe manufacturers are working on June 1 shipments in order to keep their help together. Shipments of footwear are about normal for the season. General business in chemicals is of satisfactory proportions, with quotations well sustained. A slightly better demand is apparent in dyes and tanning materials. Drugs are in active call, as is usual in early spring. Jobbers of electrical goods report an active business, but collections have been slow. Trade in house furnishings continues of fair volume, and complaints are frequent of slow payments. Owing to the milder weather painters' supplies are in more active demand and prices steady. In the lumber market no marked change is noted from last week. Northern and eastern lumber shows firmer prices, but in southern lumber arrivals are still hindered by delay in transportation. In anthracite coal orders are not brisk, as the annual reduction in prices is at hand. Bituminous coal arrivals have improved and there is no fear of a shortage. No marked change is noted in the steel and iron market, but in structural steel there are many good orders ahead. Wholesale liquor dealers report good trade. Brewers are looking forward to a busy season. The leaf-tobacco market is quite active and prices are steady; the smaller dealers are purchasing for immediate wants. Confectionery and chocolate manufacturers are busy and the general conditions are favorable. The situation in the local egg market is somewhat easier, but many of the leading factors in the trade still look for somewhat lower quotations before storing heavily.

PROVIDENCE.—Prices have advanced in the cotton-goods line and deliveries are considerably behind. The jewelry business is quiet. Jobbers in fancy goods and notions lines report a firm demand. Collections are fair.

PORTLAND, ME.—Trade in millinery, clothing and dry goods is brisk. Wholesale hardware, groceries and boots and shoes also report good sales. Collections are good.

PHILADELPHIA.—There is little change noted in textiles. Manufacturers are busy, and the demand for raw material continues. Dry-goods jobbers report business fully up to last year, but collections continue slow and unfatisfactory. Flour prices rule weak and the market is reported dull, buyers ordering sparingly. Chemicals and dyestuffs are more active, and drugs are in good demand at firm rates. Paints and glass are beginning to move in larger volume, and there is more vim to the market; prices are strong. Wholesale lumbermen report a slight lull, but retailers say they are delivering more material. The market rules strong and prices are firm, but some complaints are heard about collections. Hides and skins continue firm, with fair activity. Glazed kid continues in fair demand, and stiff prices prevail for both raw and manufactured product. Wholesale and retail shoe dealers report quiet business, a reaction from the Easter rush. Tobacco buyers are only looking for odd grades they are short of to fill orders. They have no money to purchase stock they may need in the future; collections are little improved. Whatever the future of iron may be, the fact remains that there is no abatement in the activity of trade, the situation, if anything, being stronger than it was two weeks ago. Following the custom prevailing for some years the price of anthracite coal was dropped April 1 50 cents per ton, to be regained by monthly advances of ten cents each. Many customers are improving the opportunity to put in their winter supply. Bituminous coal is in fair demand at steady prices.

PITTSBURGH.—During the week sales of Bessemer and basic pig iron were made aggregating 9,000 tons for second-half delivery at $21, which is the present ruling price at the valley furnaces on large tonnage, and there is an increased inquiry for iron for third and fourth quarters, with prices firm at present quotations. There is an urgent demand for any iron that can be delivered before July 1, but there is little of any in the market. Finishing mills are running under heavy pressure to meet bookings. Specifications for structural shapes are heavy, and considerable new business is being offered for second-half delivery. Coke is easier on full supply. Valley furnace quotations for pig iron for spot delivery are nominally as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $2.80 and foundry coke at $3.80 at the ovens.

BUFFALO.—Trade is active and increasing. Owing to favorable weather, indications point to an early opening of navigation.

BALTIMORE. — Business is very satisfactory. Wholesale trade in dry goods is very active, with continued slow deliveries from first hands. Ginghams and kindred lines are scarce, and out-of-town buyers have been endeavoring for the past two weeks to obtain supplies at increased prices. Trade in millinery continues of large volume, the season being one of the largest in years. Leaf tobacco is very firm, with receipts light. Brush manufacturers are unable to keep pace with orders. The wholesale paper trade is brisk. Deliveries are somewhat backward with woodenware jobbers, but new business and the outlook are good. Harness manufacturers are well employed, but new business is backward. Business in crockery and glassware is well up to this period last year. Lumber is somewhat backward, though an improvement is noted within the past week. Building materials are in fair demand, but sales are increasing as building operations become more active. Shoe jobbers report business normal, with a heavy demand for low cuts, especially tan, and the supply not equal to demand. Prices continue firm. A good business is noted in men's furnishings, as dealers are replenishing stocks after an exceptionally good Easter trade. Nearby dealers in the market are buying unusual quantities. Clothing salesmen are now starting out for fall business. Money is firm, and while the feeling is somewhat easier, the supply is fully taken, and no reduction in rates is looked for before May 1. Collections, on the whole, range from slow to fair.

CINCINNATI.—Business continues to improve, and this, with the improvement in freight transportation, causes activity in all lines. Money is abundant, but demand is lighter.

CHICAGO.—Threatened labor troubles for western railroads have been adjusted. The men get less than was at first offered and they have lost $300,000 by rejecting first proposals. The increase in wages will cost the railroads $4,500,000 annually. Business with manufacturers and jobbers is good, but most of the latter are doing less than two weeks ago, the rush of spring trade being over. Retail trade is good, and the weather is favorable. Dry goods, clothing and shoes are selling well. Spot business in pig iron is fair, but sales for last half delivery are light. Large consumers have made few purchases for the last half, but it is thought that they must come in soon. Four local furnaces are out of blast and the supply of northern iron is light. The undertone is good. Steel men report few cancellations. Specifications are liberal. New business is fair. Coal is weaker. Lumber is selling more freely and is firmly held. Groceries, paints and oils meet with good sale. Butter, eggs and potatoes are lower. Lambs are the highest of the season, $8.25 for western. Cattle are lower, but hogs are higher. Receipts of cattle and sheep decreased, but those of hogs increased. Money is easier and demand is fair. Commercial paper is in good request. Savings deposits are the largest in the history of the west. The tone has improved and bonds and railway notes are meeting with good sale. Collections are fair.

PEORIA.—Both wholesale and retail trade report very satisfactory sales for the past week. The outlook for business is good, but collections are only fair.

LOUISVILLE.—Business in all manufacturing and jobbing lines is good. The out-of-town trade has come to buy this season in unprecedented numbers. Business in dry goods, clothing, shoes, drugs and hardware is highly satisfactory. Whiskey dealers have had a large season. A large number of traveling salesmen left during the week with fall samples, and the balance are preparing to leave. Many merchants complain of the difficulty of getting goods from the east. Shipments that usually take from four to six days to get here from New York have been out over a month. Collections are improving.

INDIANAPOLIS.—In dry-goods and staple trades prospects are regarded as good. Business is brisk and collections are fair to excellent.

ST. LOUIS.—Manufacturers and jobbers in all lines report an exceptionally heavy volume of business. Hardware, lumber and building material are very active at firm prices which tend upward. Manufacturers of and dealers in farm machinery report the heaviest business in years, at steady prices. Trunk manufacturers are somewhat disappointed, although a good volume of business is transacted. Manufacturers of ladies' waists and skirts are running their factories to full capacity, but are handicapped by lack of help. Retail trade continues to improve; collections in general range from fair to good. There seems no uneasiness in financial circles. Demand for money is fair. There is plenty of good commercial paper offered, but banks are holding out for 6 per cent. and have no trouble in getting it.

KANSAS CITY.—Between-seasons quietness prevails with jobbers in leading lines. Salesmen are out for next season's business, and favorable reports are being received as to the outlook. Retail trade is good.

WICHITA. — Elections have retarded trade. Liquor interests in Wichita must quit business. Collections are slow.

MILWAUKEE.—Trade conditions continue satisfactory, and outdoor operations have been stimulated by mild weather. Collections are fair.

DAVENPORT.—Retail trade is quiet, following a good week before Easter. The weather is warm and river traffic is commencing early. Collections are fair. Manufacturers are busy.

SIOUX CITY.—Jobbers in all lines report good business. Farmers are half through seeding. Collections are fair.

ST. PAUL.—Trade conditions continue good in most lines, though there has been a little let up in dry goods. All lines report sales to date in excess of last year's. Collections are still backward, although more money is being received than at this time a year ago; however, the comparison is unfavorable, in that the sales are larger and outstanding accounts from last year are quite large. March collections were the poorest in six years. Wholesalers have taken many notes which they are unable to negotiate, being unsecured, and borrow money themselves at 6 per cent. Business is still at a standstill in North Dakota.

OMAHA.—Business is active in all lines. Collections are fair to good.

LINCOLN.—Jobbing business and collections are improving.

SIOUX FALLS.—Sales of agricultural implements and building materials are very large, and trade in staple lines is good. Collections are fair.

OKLAHOMA.—Retail trade in all lines is good, and collections are good.

CHARLESTON. — Wholesale trade continues quiet. Retail trade is very brisk and surpasses last season's. Collections are slow.

RICHMOND. — Iron and brass foundries and machine shops are busy at full capacity, and in some instances could do more but for the scarcity of labor. A number of foundries are making extensive improvements and additions and new machine shops are under construction. As a manufacturing center for stoves and ranges this market has grown in importance, and those engaged in this line have had a successful season and are preparing for a larger output in the future. Wholesale dealers in drugs, medicines and sundries are in the midst of an active season, sales show an increase over previous years. Small amounts of tobacco are still being marketed at satisfactory prices. The recent unseasonably cold weather has damaged tobacco plants and in some sections retarded greatly the planting of all spring crops. Collections show a slight improvement.

SAVANNAH.—Jobbers in dry goods and shoes report good trade. Lumber dealers are handicapped by lack of railroad facilities. Retail trade is good. Collections are fair.

AUGUSTA. — Retail trade is good and collections are fair.

ATLANTA.—Trade shows a slight improvement over last week, but is not quite equal to the corresponding week last year. Collections are fair.

JACKSONVILLE. — Long-continued drought affects trade conditions unfavorably. Orders from the interior have diminished, and collections are slow.

BIRMINGHAM. — Southern foundry No. 2 pig iron is scarce for immediate delivery, and the price ranges around $23.50. There are no complaints against trade. Collections are about the average.

MOBILE.—Retailers report a lull in business. Sales by jobbers are up to expectations. Collections are satisfactory. Prices on interior shipments of lumber are advancing, while export stuff is on the decline. Importations of bananas are still interfered with, owing to unsettled conditions in Central America.

MONTGOMERY.—Both wholesalers and retailers report business about on an average with that of last week, with payments slow.

CHATTANOOGA.—Trade conditions are good, and building continues active. Collections are good.

MEMPHIS.—Wholesale and retail business is improving. Collections are slow. The car shortage still delays the movement of cotton and lumber.

NASHVILLE.—Jobbers in leading lines appear satisfied with the present volume of business and report collections improving. Retail trade is excellent, having been stimulated by the season's demands and favorable weather.

LITTLE ROCK.—Wholesale trade shows a slight increase, but retail trade is a little off, due to buying before Easter.

NEW ORLEANS.—Department stores report a lull since Easter, and jobbers are booking comparatively few large orders.

FORT WORTH.—Trade is active and collections are good.

WACO. — Jobbers report good business, but collections are slow.

DALLAS.—Business in most lines is good, and sales as a rule are in excess of last year's. Collections are about normal.

SAN FRANCISCO.—The past month has been the wettest in fifty-seven years. Nearly all isolated points are now again in communication. Storms occasioned a setback in rebuilding, but there has been an energetic resumption.

SEATTLE.—Wheat stocks are lower than for several years past, but railroad companies promise that the embargo on these products will be lifted in a short time. Traders are complaining generally about collections. The situation, however, will likely be relieved in the near future by the usual spring remittances from Alaska and other places. Prices are firm.

SPOKANE.—Trade continues good, but collections are slow.

TACOMA. — Building operations are active. Trade conditions generally seem more favorable.

PORTLAND, ORE.—Lumber mills are now running normally, although the strike still exists. Jobbers report an increased volume of trade, and there is no abatement in real-estate activity. Collections are good.

TORONTO.—All lines of trade show great activity. Retail trade is brisk. Country trade is slightly quieter than was the case a week or two ago. There is, however, a good business moving in all the towns and cities of the province. Dry goods continue very brisk, with a good sorting trade now moving. Demand for millinery and all fancy lines is very heavy despite high prices. General spring trade was heavier than ever. A heavy business is doing in all lines of men's wear. Clothing manufacturers find trouble in keeping up with orders. All lines of woolens are firm. This spring has seen a record business in household furnishings. New carpets are being delivered, but owing to heavy demand stocks are light. Collections are still quiet, although improvement has set in. Money is a trifle easier. Groceries are moving fairly well. Dairy produce is coming forward quite freely and prices are easier. Cattle and hogs are steady to firm. Hides and skins are quiet, with prices easy and tending lower. Tallow is firm on a light supply. Wool is quiet. Trade in foreign fruit is very active, with prices holding steady.

MONTREAL.—General retail trade has had rather a quiet tone during the past week. A cold snap and bad roads greatly interfered with demand for spring lines, although the millinery trade attendant upon Easter has been very heavy. There has been a particularly good run upon goods of the better class. In some lines stocks have been swept clean. The mills are oversold on domestic textiles. The scarcity of silks is a feature. The Montreal Cotton Company has issued a new price list showing advances of from 5 to 7½ per cent; all textiles are exceedingly firm in tone. The hardware trade is having one of the busiest seasons in years. Demand for iron and steel of all kinds is unusually heavy, and prices hold firm. Eastern mills are turning out large quantities of metal, but they are unable to entirely cope with the business in hand. All lines of building material are active. Navigation is about opening, and this will facilitate shipments of heavy goods. The new Harbor Commission is laying plans to increase shipping accommodations of the port. Backed by the Dominion government it will spend large sums of money upon the harbor and the St. Lawrence waterway. Groceries are moving fairly well. Boots and shoes are quite active. There seems to be a shortage of railway cars in all parts of Canada, and shippers and receivers are experiencing trouble. Collections are still a little slow.

VANCOUVER-VICTORIA.—The trade movement, wholesale and retail, along the coast is brisk. Indications point to a heavy summer trade. Spring business exceeds previous records, although there is still much complaint of the slowness of eastern goods. Local industries continue very active. There is considerable movement in real estate and prices hold firm. Collections are fair to good.

WINNIPEG.—Spring trade is very active. The roads are now in pretty bad state, and this has affected country retail trade. Sorting trade is brisk, and wholesale goods are moving as rapidly as the crowded state of the railroads will permit. Collections show a further slight improvement, although they are still slow. The coming season promises to be an exceedingly active one in the matter of building. Dry-goods jobbers are behind on shipments, owing to the slowness of manufacturers' deliveries.

FINANCIAL.

Money Market.

During the present week the Secretary of the Treasury has ended all uncertainty as to his policy in regard to paying off the United States 4 per cents due July 1. This, as explained in full elsewhere, involves an offer to convert $50,000,000 of these bonds into the 2 per cents and to redeem at par whatever balance of the issue may be left after the conversion above mentioned and the prepayment of up to $25,000,000 thereof under his offer of last week. The effect on the money market has been decidedly favorable; moreover, the New York banks have gained from the Treasury, through increased deposits of government funds and prepayment of 4 per cent. bonds, nearly $12,000,000 this week, and the estimated net gain from all sources is placed at a somewhat larger figure. There has been a marked easing off of call-loan rates, the figure for renewals, which at the beginning of the week was about 4½ per cent., working down before it ended to 2½ per cent. In the same way time money, which was 6 per cent. for all periods, declined to 5½ per cent., and some round amounts were to be had for short periods at that rate. A feature in this connection was the inclination of borrowers of time money to hold off on the idea that they could obtain better terms by waiting. Mercantile paper, it may be remarked, continues very dull, the buying being mainly for out-of-town, while the rates have held at 6¼ @6½. But little attention was paid to the engagement of $2,500,000 gold from London early in the week or the subsequent sharp rise in exchange which ensued, the explanation of the latter movement being that stock-market borrowers were paying off foreign loans.

New York Banks.

Last week's Clearing House statement was fully as favorable as had been anticipated. The principal item in the exhibit was the increase of $12,840,000, reflecting the extremely large gain which the banks had made from the Treasury during the week. In fact, these items corresponded very well with the preliminary estimates of the actual movement of cash for the week. There was also an increase of $6,555,000 in the loans, which was not unexpected, in view of the recovery in stock-market prices. The surplus requirements increased, however, only $4,418,000, so that there was a gain in the surplus reserves, exclusive of United States deposits, amounting to no less than $8,421,000. The figures of the statement compare as follows with those of the preceding week:

	March 30	*March 23*	*Changes*
Loans	$1,056,545,200	$1,049,989,600	I. $6,555,600
Specie	195,659,700	184,974,400	I. 10,685,300
Legal tenders	72,425,900	70,271,200	I. 2,154,700
Deposits	*1,019,817,300	1,002,144,600	I. 17,672,700
Circulation	50,820,000	50,920,300	D. 100,300
Total reserve	268,085,600	255,245,600	I. 12,840,000
Reserve required	254,954,325	250,536,150	I. 4,418,175
Surplus reserve	13,131,275	4,709,450	I. 8,421,825

The following table shows the bank holdings on the respective dates:

	Mar. 30, 1907	*Mar. 31, 1906*	*Apr. 1, 1905*
Loans	$1,056,545,200	$1,025,503,900	$1,099,289,700
Specie	195,659,700	177,805,000	209,481,100

Foreign Exchange.

Improved money market conditions and prospects both here and abroad seemed responsible for the sharp advance in foreign exchange rates at New York this week. The market was at times excited and active, and though slight reactions occurred at times, the tone throughout may be described as decidedly strong. The easing off of money seems to have stimulated the demand for cables and sight bills, while the lower range of discount rates in the London open market caused rapid advances in long sterling, the former going up from 4.83.60 on Monday to 4.84.85, and the latter from close to 4.79 to 4.80 75, with corresponding firmness in continental exchange. Posted rates underwent two changes, on Tuesday and Thursday respectively, the last one making the nominal figures 4.81½ @4.85½ respectively. The supply of commercial bills was not particularly large. One of the peculiar features was the engagement by a New York banking house of $2,500,000 gold in London on last Tuesday in spite of the strength which had already developed in exchange rates on this side. Later on, however, the firm interested in the matter resold the specie in London. On Friday the market was strong at an additional advance in rates, and posted rates were again marked up to 4.82@4.86.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 30	*Apr. 1*	*Apr. 2*	*Apr. 3*	*Apr. 4*	*Apr. 5*
4.80 @ 4.84½	4.80 @ 4.84½	4.81 @ 4.85½	4.81 @ 4.85½	4.81½ @ 4.85½	4.82 @ 4.86

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.83.40 @ 4.83.50	4.83.60 @ 4.83.70	4.84.50 @ 4.84.75	4.84.40 @ 4.84.55	4.84.70 @ 4.84.85	4.85.00 @ 4.85.10

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.79.00 @ 4.79.30	4.79.10 @ 4.79.50	4.79.75 @ 4.80.25	4.80.00 @ 4.80.40	4.80.40 @ 4.80.75	4.81.00 @ 4.81.25

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.85.80@4.85.85; commercial bills, 4.80⅜@4 81⅛; francs, 5 23¾ less 1-16@5.20⅝ less 3-32; reichsmarks, 93 9-16@94½ plus 1-64.

The Bank of England's minimum discount rate is unchanged at 5 per cent. The bank showed a decrease of £655,000 in specie, but its proportion of reserve rose from 40.95 per cent. to 41.42 per cent. In the London open market money was easier, and discount is quoted at 4½ @4⅝ per cent., while call loans are 3½ per cent. The Bank of France reported a decrease of 22,725,000 francs in gold. Its rate is unchanged at 3½ per cent., discount in the Paris market being quoted at 3⅛ per cent. At Berlin the bank rate is still 6 per cent., and the market rate for discount 5⅜ per cent.

New York Securities Market.

The strength and activity developed in the New York share market this week was something of a surprise. While it was recognized that the plans recently announced by the Secretary of the Treasury to release funds from the government coffers and thus help the financial situation were working well, and that stock-market sentiment was improving in consequence, it was hardly anticipated that such results would follow at the Stock Exchange as have been actually seen. It is generally considered that the short interest was, on the whole, larger than has been supposed. In fact, the way in which a number of the leading speculatives have behaved would indicate that covering of contracts by the bears was a principal ingredient in bringing about the rather sudden advances which occurred in them. There was, however, also evidence of good support by the large interests in certain specialties and of repurchases by traders of the semi-professional class, who had gotten out of the market during the recent break. In spite of some improvement in the foreign financial position and of a rise in exchange rates here, which sets London at ease, so far as the ability of New York to draw gold away from it is concerned, the foreign markets only followed New York's lead in regard to Americans, the purchases of stocks for foreign account being, on the whole, rather moderate. One of the features of the week was the absence of any decided disappointment at President Roosevelt's declination to in any way modify his views about the desirability of governmental regulation of railways or the methods by which it should be accomplished; nor was more than a passing importance attached to an incident involving antagonism between the Executive and the head of the Union Pacific-Southern Pacific system, Mr. E. H. Harriman.

As is explained in full elsewhere, the Secretary of the Treasury has taken further action of a kind which has had a favorable bearing upon the money market conditions, his present measures having reference to the refunding of $50,000,000 of 4 per cent. bonds and provision for the paying off of about not less than $36,000,000 of the same when they mature on July 1. This, together with the fact that prepayment of the 4 per cents, under the offer to redeem $25,000,000 of that issue, has proceeded rapidly this week, so that the banks have apparently gained about $12,000,000 in cash, has had a marked effect on rates for loans. The ease as to call money and the relaxation of rates on time may, in fact, be looked on as the principal cause for the better feeling in Wall street, and also for the way in which prices have tended to advance this week without anything more than temporary reactions. Practically the entire list shared in the movement. It might be observed, however, that a further though moderate decline in the copper metal market had had an adverse influence upon the copper stocks, including Amalgamated. In other quarters, however, the tendency was upward. Among the chief features were Canadian Pacific, Union Pacific, Great Northern, Reading and stocks of the same grade, it being a presumption that in each of them there was still outstanding a considerable short interest which covered in a rather urgent way. The declaration of a 3 per cent. half-yearly dividend on Atchison common, which puts the stock on a 6 per cent. basis, was another incident, and had a favorable effect upon the security. Erie shares were unsteady at first, but with the announcement that the company had arranged to borrow the funds to retire its maturing short-term obligations, even though this was on onerous terms, seemed to have a better effect on their position. The market continued very strong on Friday, there being merely a moderate recession on profit-taking at the close.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending April 4 shows an aggregate of $3,066,959,000, as against $3,063,262,000 last week and $3,134,603,000 in the corresponding week last year. Canadian clearings for the week aggregate $64,226,000, as against $75,352,000 last week and $71,493,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	April 4	Inc.	Dec.	March 28
New York	$1,952,482,000	....	6.1	$1,973,462,000

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and for the thirty-nine weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
March 30, 1907	374,197	3,807,990	4,881,974	4,468,768
March 31, 1906	310,276	2,997,105	3,522,472	3,892,531
April 1, 1905	245,475	2,431,127	4,745,836	3,476,932
Season				
July 1, 1906, to March 30, 1907	15,927,939	200,095,606	159,111,075	155,652,346
July 1, 1905, to March 31, 1906	15,183,137	206,278,584	147,005,617	172,487,501
July 1, 1904, to April 1, 1905	13,316,610	184,293,563	147,318,668	130,426,623

Grain on Passage.

To	Wheat and flour	Corn, bush
United Kingdom	33,120,000	3,910,000
Continent	16,400,000	4,845,000
Total week ending March 28	49,520,000	8,755,000
Preceding week	50,320,000	7,905,000
Corresponding week 1906	40,680,000	9,265,000

World's Wheat and Corn Shipments.

WHEAT—BUSHELS.

	March 28, 1907	March 21, 1907	March 29, 1906
United States and Canada	2,708,000	1,879,000	1,543,000
Argentina	3,448,000	4,624,000	3,304,000
Russia	880,000	1,920,000	1,392,000
India	328,000	856,000	....
Danubian	216,000	400,000	168,000
Australian	784,000	1,760,000	816,000

Total	2,446,000	3,521,000	3,102,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Mar. 29, 1907	Mar. 22, 1907	Mar. 30, 1906
American	4,007,813	4,024,400	3,122,496
Other kinds	1,371,000	1,363,000	1,531,000
Total	5,378,813	5,387,400	4,653,496

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Mar. 29, 1907	Mar. 22, 1907	Mar. 30, 1906
Great Britain and continent	2,976,000	2,886,000	2,209,000
Egypt	212,000	215,000	174,000
India	742,000	724,000	970,000
United States	1,449,000	1,562,000	1,300,000
Total	5,379,000	5,387,000	4,653,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	159,797	195,000	137,799
Season	12,197,061	12,000,000	9,550,076

New York's Foreign Trade.

IMPORTS.

	1907	1906
Dry goods	$4,687,830	$3,300,592

Total week ending March 30	20,794,463	14,403,439
Previously reported	211,176,237	176,922,973
Since January 1	231,975,700	191,326,412

EXPORTS.

	1907	1906
Exports week ending March 30	$10,888,378	$13,188,228
Previously reported	160,894,467	162,082,528
Since January 1	171,782,845	175,270,756

Boston Wool Market.

Domestic grades are being neglected to a great extent and more attention is being given to foreign wools, since the selections of domestics are so small and consist of such odd lots that they cannot be moved even at price concessions. Prices for domestics, with the exception of quarter blood fleeces, are generally firm, however, and the reason for the utter lack of demand, even at lower prices for fleece quarters, which are in relatively larger supply than any other domestic grade, is still missing. The larger mills are now well supplied, and the smaller manufacturers are buying only as the wool is actually needed. There are no Boston buyers in the west at present, and there seems to be a definite determination among dealers not to pay a cent more than the wool is worth this season. The early-shorn Arizona wools have been well cleaned up in the country, and the interest is being transferred to the northern shearing sections. The arrivals of foreign wool have been very large of late, mostly for manufacturers' accounts, but the movement has been very good. In domestic wools the sales of the week included Idaho and Montana clothing at 21½@22 cents, new Arizona at 25@26 cents for choice, fall Texas at 21@21½ cents, middle counties California at 22@22½ cents, and scoured at 68@70 cents for fine and 65@66 cents for fine medium. Foreign 70s sold at 43½@44 cents in the grease, or 85 cents clean; 56s at 75@77 cents, scoured, and low crossbred 46s at 60@62 cents. English markets are reported firm, and predictions are made that prices will be fully maintained at the May sales in London, if not further advanced.

Boston Shoe and Leather Market.

The leather market is quiet. Some houses have accumulated some hemlock sole leather, but receipts of union have been balanced by shipments. Oak backs are firm, and certain grades are held for higher figures. Grain leathers have been quiet, dealers still waiting for the manufacturers of shoes to begin covering fall orders. Some dealers report a slackening of urgency in demand for splits. Manufacturers are, however, in many cases sold ahead for several months. Prices are held firmly to high figures. The local hide market is quiet. Some dealers are said to have accumulated stock in their storage cellars, and tanners are not buying, hoping for lower prices. Shoe manufacturers are not receiving enough orders to keep their factories running to full capacity. Jobbers are apparently well supplied with spring stocks and have not been compelled to supplement their early stock orders to the usual extent. These orders may come in later with a rush, but conservative manufacturers are prepared to be disappointed. Shipments are running about the same as last year at this time. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 94,509 cases; preceding week, 96,661; last year, 94,839; total for 1907, 1,214,335; total for 1906, 1,282,896; decrease, 68,561.

RAILWAY MILEAGE BUILDING.

A year ago the records of the *Railway Age* showed that "over 13,000 miles of new railroad were then under contract, nearly one-half of which was completed before the close of the year—a larger mileage than has been built in any other single year since 1888. There is almost as large a mileage under contract to-day, and while there will be great activity during 1907 in pushing to completion new lines on which the work of construction already is well advanced and financial arrangements for which have been made, the launching of new projects, for which the capital must be provided, in many instances has been postponed until conditions improve.

"The mileage of new lines under contract and those which are classed as "live projects"—the latter including only such lines as bear the stamp of genuineness and which probably would be undertaken during the present year were the conditions more favorable—is shown in the following table, which has been compiled from official reports:

	Under contract, miles	Live projects, miles
New England states	3	330
Middle Atlantic states	295	1,011
South Atlantic states	1,821	558
Gulf and Mississippi valley states	1,755	396
Central northern states	1,000	377
Southwestern states	2,286	2,070
Northwestern states	1,885	963
Pacific states	2,866	3,061
Total	11,912	8,766

"The above table shows that the Pacific states have a larger mileage (2,866 miles) under contract than any other group of states, although there is great activity in the southwestern states, where 2,286 miles are under contract. The state having the greatest mileage under contract (990 miles) is Washington, and over 700 miles of this are being built by the Harriman and the Hill lines and the Chicago, Milwaukee & St. Paul. Some other states which show large mileage under contract are: Texas, 850 miles; Montana, 719; California, 602; Louisiana, 593; Nevada, 568; North Carolina, 480; Virginia, 449; Florida, 400; Wisconsin, 398; South Dakota, 381; Oregon, 353; Minnesota, 323; Arkansas, 300.

"Although the mileage under contract is 1,100 miles less than that reported a year ago, there is every reason to believe that the mileage of track laid in 1907 would equal, if not exceed, that for 1906 except for the conditions above referred to. There was a large amount of grading completed last year in addition to the 6,100 miles on which the rails were put down, and the work of tracklaying has progressed steadily since the first of the year in localities where the weather would permit. Grading also has been pushed with as large forces as could be secured, although the difficulty of securing laborers has by no means disappeared. Even though no new projects are taken up and work proceeds without interruption on only such lines as already are under construction, there will be large additions to the railway mileage of the country before the close of the year, but if the state legislatures continue their threatening attitude and proceed to enact bills to oppress and harass railways, there is no telling where retrenchment will stop."

IRON AND STEEL NOMENCLATURE.

According to the *Iron Age*, "the report of the Committee on the Uniform Nomenclature of Iron and Steel, presented at the Brussels Congress of the International Association for Testing Materials, September 3-9, 1906, is to be submitted to the Iron and Steel Institute and kindred organizations for their indorsement. After adopting it the Brussels congress asked the committee to continue its work, with a view to securing the foreign equivalents of the terms defined in English in its report. This latter labor the committee has prosecuted to some extent, and its report is accompanied by a chart giving a polyglot in English, French, German, Swedish, Danish and Dutch, of various terms applying to pig irons, steels and wrought iron and the apparatus in which they are made. Prof. Henry M. Howe, Columbia University, New York, is chairman of the committee, and Albert Sauveur, Harvard University, Cambridge, Mass., secretary. A third American member of the committee is H. H. Campbell, Steelton, Pa. The metallurgical definitions as presented by the committee are given below, also a few definitions of special sizes or shapes of iron and steel, and a suggestion as to the line of demarcation between iron and steel:

"*Alloy Cast Irons.*—Those which owe their properties chiefly to the presence of an element (or elements) other than carbon.

"*Alloy Steels.*—Those which owe their properties chiefly to the presence of an element (or elements) other than carbon.

"*Basic Pig Iron.*—In America, pig iron containing so little silicon and sulphur that it is suited for easy conversion into steel by the basic open-hearth process. It is restricted to pig iron containing not more than 1 per cent. of silicon.

"*Bessemer Pig Iron.*—That which contains so little phosphorus and sulphur that it can be used by itself for conversion into steel by the original or acid Bessemer process. In America this term is restricted to pig iron containing not more than .10 per cent. of phosphorus.

"*Bessemer Steel.*—Steel made by the Bessemer process, whether its carbon content is high, low or intermediate.

"*Blister Steel.*—Steel made by carburizing wrought iron by heating it in contact with carbonaceous matter. It might also be made by so carburizing a low carbon steel.

"*Cast Iron.*—Generically, iron containing so much carbon or its equivalent that it is not malleable at any temperature. Specifically, cast iron in the form of castings other than pigs, or remelted cast iron suitable for casting into such castings, as distinguished from pig iron—i. e., cast iron in pigs, etc. For instance, cast iron pigs—i. e., pig iron, like lead in pigs, i. e., pig lead—is remelted and cast into castings, such as columns, locks, gears, etc., of special shape suited to their special purpose; these are specifically called 'cast iron,' and this is the usual restricted meaning of 'cast iron' in trade language. The committee recommends drawing the line between cast iron and steel at 2.20 per cent. carbon for the reason that this appears from the results of Carpenter and Keeling to be the critical percentage of carbon corresponding to the point 'a' in the diagrams of Roberts-Austen and Roozeboom. As to the signification of this critical point the committee is not prepared to express an opinion. Professor Wedding reported that in Germany every metallic product of the blast furnace is called pig iron or cast iron, and appeared to dissent from drawing any line between cast iron and steel. Mr. Brinell thought 2.20 per cent. of carbon a rather high limit for practical purposes.

"*Cast Steel.*—The same as crucible steel. Obsolescent, and to be avoided because confusing and because a temptation to fraud.

"*Cemented Steel.*—The same as blister steel.

"*Charcoal Hearth Cast Iron.*—Cast iron which has had its silicon and usually its phosphorus removed in the charcoal hearth, but still contains so much carbon as to be distinctly cast iron.

"*Converted Steel.*—The same as blister steel.

"*Crucible Steel.*—Steel made by the crucible process, whether its carbon content is high, low or intermediate.

"*Gray Pig Iron* and *Gray Cast Iron.*—Pig iron and cast iron in the fracture of which the iron itself is nearly or quite concealed by graphite, so that the fracture has the gray color of graphite.

"*Hematite Pig Iron.*—Originally pig iron made from the hematite ores of England, which happen to be so free from phosphorus and sulphur that the pig iron made from them can be used by itself for the acid Bessemer process. By association it has come to mean any pig iron thus relatively free from phosphorus and sulphur. The term is not used in America and is undesirable.

"*Hot Metal* or *Direct Metal.*—The molten cast iron from the blast furnace before it has been allowed to solidify.

"*Ingot Iron.*—Steel cast into an initially malleable mass and containing so little carbon or its equivalent that it does not harden greatly on sudden cooling. The word is rarely used in English, 'mild steel' or 'low carbon steel' or 'soft steel' being generally used in its place. In America the line between soft steel and half-hard steel is usually drawn at a carbon content of about .20 per cent.

"*Ingot Steel.*—Steel cast into an initially malleable mass and containing so much carbon or its equivalent that it hardens greatly on sudden cooling. The word is rarely used in English, but 'hard steel,' 'high carbon steel' or 'half-hard steel' are used in its place.

"*Malleable Castings.*—Castings of malleable cast iron, which see.

"*Malleable Cast Iron.*—Iron which when first made is cast in the condition of cast iron, and is made malleable by subsequent treatment without fusion. Although the English name of this variety suggests that it is cast iron, it is not truly a variety of cast iron, but rather forms an independent species of iron, because it lacks the essential property of cast iron, viz, its extreme brittleness. Though the term 'malleable castings' is very common, the term 'malleable cast iron' is very rarely used. The common but inexcusable term, we regret to say, is 'malleable,' pronounced 'mallable,' used as a substantive. Those with some respect for their mother tongue, if asked of what material a malleable casting was composed, would generally use a circumlocution.

"*Malleable Iron.*—The same as wrought iron. Used in Great Britain, but not in the United States, except carelessly as meaning 'malleable cast iron' (vulgar 'malleable').

"*Malleable Pig Iron.*—An American trade name for the pig iron suitable for converting into malleable castings through the process of melting, treating when molten, casting in a brittle state, and then making malleable without remelting. The term should be used with care to avoid confusion. This material is also called in trade in America 'malleable iron,' but this use should be avoided, because 'maleable iron' has the older and (in Great Britain) firmly established meaning of 'wrought iron.'

"*Mottled Pig Iron* and *Mottled Cast Iron.*—Pig iron and cast iron the structure of which is mottled, with white parts in which no graphite is seen, and gray parts in which graphite is seen.

"*Open-Hearth Steel.*—Steel made by the open-hearth process, whether its carbon content is high, low or intermediate.

"*Pig Iron.*—Cast iron which has been cast into pigs direct from the blast furnace. This name is also applied to molten cast iron which is about to be so cast into pigs or is in a condition in which it could readily be cast into pigs.

"*Plate Iron.*—A name applied in Great Britain to refined cast iron.

"*Puddled Iron.*—Wrought iron made by the puddling process.

"*Puddled Steel.*—Steel made by the puddling process, and necessarily slag-bearing. (See Weld Steel.)

"*Refined Cast Iron.*—Cast iron which has had most of its silicon removed in the refinery furnace, but still contains so much carbon as to be distinctly cast iron.

"*Shear Steel.*—Steel, usually in the form of bars, made from blister steel by shearing it into short lengths, piling, and welding these by rolling or hammering them at a welding heat. If this process of shearing, piling, etc., is repeated, the product is called 'double shear steel.'

"*Steel.*—Iron which is malleable at least in some one range of temperature, and in addition is either (a) cast into an initially malleable mass; or (b) is capable of hardening greatly by sudden cooling; or (c) is both so cast and so capable of hardening. Variety (a) includes also molten iron which, if cast, would be malleable, as do its two sub-varieties, 'ingot iron' and 'ingot steel.' (Tungsten steel is malleable only when red-hot.)

"*Steel Cast* (adjective).—Consisting of solid Bessemer, open-hearth, crucible or other slagless steel, and neither forged nor rolled; applied to steel castings. For instance, a 'steel cast' gun is a gun which is a steel casting—i. e., which has been neither forged nor rolled. To call it a 'cast steel' gun would imply that it was made of crucible steel, to which the term 'cast steel' is restricted.

"*Steel Castings.*—Unforged and unrolled castings made of Bessemer, open-hearth, crucible or any other steel. Ingots and pigs are in a sense castings. The term 'steel castings' is used in a more restricted sense, excluding ingots and pigs and including only specially shaped castings, such as are generally used without forging or rolling. They may, however, later be forged—e. g., under the drop press—when they cease to be 'castings' and become 'drop forgings,' or if only part is forged, then they are partly forgings and partly castings.

"*Washed Metal.*—Cast iron from which most of the silicon and phosphorus have been removed by the Bell-Krupp process without removing much of the carbon, so that it still contains enough carbon to be classed as cast iron. The name 'washed metal' is extended to cover this product even if its carbon is somewhat below the proper limit for cast iron.

"*Weld Iron.*—The same as wrought iron. Obsolescent and needless.

"*Weld Steel.*—Iron containing sufficient carbon to be capable of hardening greatly by sudden cooling, and in addition slag-bearing because made by welding together pasty particles of metal in a bath of slag, as in puddling, and not later freed from that slag by melting. The term is rarely used.

"*White Pig Iron* and *White Cast Iron.*—Pig iron and cast iron in the fracture of which little or no graphite is visible, so that their fracture is silvery and white.

"*Wrought Iron.*—Slag-bearing, malleable iron, which does not harden materially when suddenly cooled.

"*Wrought Steel.*—The same as weld steel. Rarely used.

"Special sizes or shapes of iron and steel are defined as follows:

"*Bar Iron.*—Wrought iron in the form of bars, rods, etc.

"*Muck Bar.*—The wrought bars usually one inch thick and about four inches wide, made by the first rolling of a ball of puddled iron.

"*Merchant Bar.*—Wrought iron in the form of merchantable bars or rods made by shearing muck bar into short lengths, piling it and rolling or forging it at a welding heat.

"*Bloom.*—1. A large bar, drawn from an ingot or similar mass, for further manufacture. 2. A rough bar of wrought iron drawn from a Catalan or bloomary ball for further manufacture.

"*Billet.*—A small bar drawn from a pile, bloom or ingot for further manufacture. The committee recommends that the line between blooms and billets be drawn at the size of five inches square, as representing common custom.

"*Slab.*—A flat piece or plate, with its largest surfaces plane drawn or sheared from an ingot or like mass for further treatment.

"It would be well to decide on a definite carbon content to serve as a boundary line between ingot iron and ingot steel, between puddled iron and puddled steel, and between any other varieties of wrought iron and weld steel. Two plans have been considered. One is to draw this line at .32 per cent. carbon or its equivalent in other elements, for the reason that this carbon content appears to correspond to the critical point O in the diagrams of Roberts-Austen and Roozeboom. This has the merit of corresponding to a definite physical boundary. Mr. Pourcel would classify solely according to the presence or absence of slag, so that 'steel' should include all forms of iron freed from slag by fusion and cast in a malleable condition, and 'wrought iron' should include all classes produced in a pasty condition. He does not think that any cross classification according to the proportion of carbon is expedient.

"The other plan is to draw the boundary at .20 per cent. of carbon, because this is a convenient place to separate the important classes 'soft steel' and 'half-hard steel,' so that if this point were adopted 'ingot iron' would be synonymous with 'soft steel,' and 'ingot steel' would be the equivalent of the two classes 'half-hard steel' and 'hard steel.'"

WITH one ribbon and its new three-color device

The New Tri-Chrome Smith Premier Typewriter

is virtually three typewriters in one. It produces indelible black, purple copying or red typewriting at the will of the operator. One ribbon and a small, easily operated lever do it all.

This machine permits not only the use of a three-color ribbon, but also of a two-color or single color ribbon. No extra cost for this new model.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 13, 1907.

In the stock, grain and cotton markets alike, there seems to be at the present time lack of interest on the part of the public. In other words, there is no disposition on the part of those who are not professionally connected with the markets in question to take an active part in them or to trade on any extensive scale. This does not, of course, apply to the large element which finds excitement, if not profits, in dealing in stocks or commodities on a speculative basis. At the same time, it has been very apparent that outsiders at large see little or no inducement to enter the lists. In spite of the ease of money the stock market has degenerated into a very narrow affair, while good crop prospects do not stimulate activity in grain and cotton. It would seem that the lessons of the last few months, particularly the one administered to the stock-market contingent in March, have been effective, and that the field had been left to the regulars, who, under such circumstances, naturally incline to work on the bear side. How long such a condition of affairs will continue it is impossible to say. The natural supposition would, however, be that the lowering of the level of prices for securities would ultimately attract increased buying power into the market which Wall street affords, even though corporations are at present surrounded by unusual complications in the form of actual or prospective governmental regulation, the effects of which are of course unknown. In the main the agitation is, however, unsettling in its influence on the minds of both speculators and investors, and would in a large measure account for the conditions existing in all the markets.

While the reduction on last Thursday of the Bank of England's discount rate from 5 per cent. to 4½ per cent. had been fully anticipated, and, in fact, more or less discounted in the money and exchange markets early in the present week, it was naturally regarded with a good deal of interest. In fact, it ranked among the influences which tended to create the additional feeling of ease which has been manifested in the financial market at New York. It is pointed out that with a reserve of only 43½ per cent. of its liability, the Bank of England is still below the average it usually holds at this period, and that in fact its gold holdings are comparatively low. What is considered the significant point in the matter, however, is that it presumably indicates a feeling on the part of the leaders of the London financial world, that the improvement in the money situation here minimizes the danger of an outflow of gold from the British capital to New York. It is also noted that the Bank of England this week secured practically all the new gold which arrived from South Africa in London. Furthermore, there has been an apparent improvement in the position at Paris, the Bank of France having gained, instead of losing, gold this week, while at the same time it reduced its loans by the enormous amount of 254,000,000 francs.

Secretary Taft does not go to Cuba for a vacation. Indeed, he declared on Sunday that he had been through one of the busiest days of his life. He has managed, however, with his usual tact, to satisfy most of those with whom his duties have brought him into contact. He has arranged for the taking of a census which will occupy at least four months. After that one month will intervene before the municipal elections. These elections will determine the effectiveness of the new electoral laws. Some time after these, perhaps five or six months, general elections for a president, vice-president and congressmen will follow. The decision of the Secretary to hold the presidential and congressional elections after the local elections seems to have met with general approval in the island, particularly in directions where conservative influences predominate.

Upon the basis of an opinion rendered by the Attorney-General, President Roosevelt has issued directions to the Secretary of Agriculture as to the proper labeling of whiskey under the pure-food law. In accordance with these directions straight whiskey will be labeled as such; a mixture of two or more straight whiskies will be labeled blended whiskey or whiskies, and a mixture of straight whiskey and ethyl alcohol, provided there is a sufficient amount of straight whiskey to make it genuinely a mixture, will be labeled as compound of or compounded with pure grain distillate. There is some talk of contesting the validity of the President's order in a suit in the courts.

It is not often that the passing of an administrator holding an office less than the highest in a nation calls for notice, but once in a long while such an occasion arises. There are no posts more exacting in their requirements than those through which a great European nation administers the affairs of a country alien in blood and speech, such, for example, as Egypt, and it is a striking testimonial to the ability of such an administrator when it can be said of him, as the British Foreign Secretary said of Lord Cromer, who has just retired from the post of British Agent and Consul-General in Egypt, that his passing from the scene of his labors was the greatest personal loss the public service of the country could suffer. Lord Cromer's career in Egypt is one particularly deserving of study by statesmen of other countries who have problems of colonial administration to solve.

Complete returns under the call issued by the Comptroller of the Currency on March 22 on the national banks are now at hand, having been made public on Friday. The striking feature in the exhibit is the enormous increase shown in the item of loans, the total of which at the date mentioned was $4,535,844,098, being a gain of $72,576,468, or 1.6 per cent., over the same item at the time of the last call on January 26, 1907, and no less than $394,667,399, or 9.5 per cent., larger than on April 6, 1906. In the past three months the individual deposits have also grown to the amount of $153,861,335, or 3.6 per cent., but in the past year the increase in this item is $291,043,742, or only 7.4 per cent. as compared with the above expansion in the loan account. At the same time the rise in the government deposits in national banks, from $64,133,037 a year ago to $140,801,794 on March 22, 1907, which is equivalent to nearly 12 per cent., would go far toward explaining the way in which the loan account has been expanded.

While the recent easing off of prices for copper has not been either startling or severe, it has, nevertheless, provoked not a little discussion regarding the future course of the market for the metal. In certain quarters there is a disposition to regard such tendencies as having reference mainly, if not entirely, to speculative contracts, and not to business in the spot article. On the other hand, attention is directed to the fact that an increasing number of new mining enterprises are getting into position to become active producers on a large scale, and that the development and construction work of certain concerns of that class has actually reached the stage at which they are marketing their output. While it is difficult to figure how large the additional supplies from such sources will be, it is a fact beyond peradventure that these additions, together with the enlargement of the mills and smelters of various old companies, will lead to an augmented supply of the metal. At the same time authorities on the copper situation are inclined to give attention to the slacking of electrical work both by traction companies and the steam railroads which have planned to apply electric power on portions of their systems, this being one of the consequences of the difficulty of raising additional capital, and partially, at least, the agitation for restrictive legislative or administrative action in regard to such matters. Under such circumstances, it is contended with a certain amount of reason that the present recession in copper prices, more particularly for distant deliveries, is not only natural but is liable to continue to a certain extent, though the best authorities on the subject do not seem to apprehend that the immediate decline in copper values will be of a disturbing character, a level of from 18 to 20 cents per pound being regarded as the extreme limit which the quotations are likely to reach, unless general business and financial conditions assume a much worse form than could be reasonably anticipated from the present circumstances.

So far as existing conditions are concerned, the status of the Isle of Pines seems to be pretty definitely established by the decision of the Supreme Court of the United States in the case of Pearcy vs. Stranahan. This case arose out of an importation of some cigars made in the Isle of Pines out of tobacco grown there, and upon which the importer refused to pay duty. The action of the Collector of the Port of New York in seizing the cigars was sustained by the Circuit Court at New York and has now been upheld by the Supreme Court. Chief Justice Fuller, who read the opinion of the court, said that up to the date of the Paris treaty the island had been considered as an integral part of Cuba; that it could not be held to be covered by the second article of the treaty, which included only islands in the vicinity of Porto Rico, and that it had always been treated by the President's representative in Cuba as a part of the territory of that republic. In short, according to the opinion, the Isle of Pines continues at least de facto under the jurisdiction of the government of the republic of Cuba, and as it has been and is being governed by that republic, it remains "foreign country" within the meaning of the Dingley tariff law.

RAILWAY GROSS EARNINGS STILL GAINING.

Basic conditions, the best evidence of which is found in the plethora of business, remain unimpaired, and therefore the tonnage being carried by the railways is still of goodly proportions. Hence gross earnings continue on the up grade, although a smaller volume is being saved for net revenue, this being a natural corollary of higher operating costs, chiefly due to the high prices paid for materials and to the enchanced wages of employees. However, traffic congestion is no longer so aggravating and the supply of cars is more plentiful, ultimate results from which must prove beneficial in the long run. Indeed, with the return of more seasonable weather and a continuance thereof, it is more than likely that the railways will make considerable inroads on the item of operating expenses. As matters now stand, the outlook is for a heavy tonnage at remunerative freight rates for months to come.

Past results, those covering the first quarter of the calendar year, have been very favorable, although gross traffic receipts increased only $8,578,931, or 4.2 per cent., over the figures attained in the like time in 1906, the earnings aggregating $208,380,135; but then it should be remembered that conditions in that period were almost ideal, the winter being the mildest in a generation and business exceptionally good, wherefore huge gains in gross earnings were scored, the increase for the quarter being no less than 18 per cent. On the other hand, operating conditions during the first quarter of this year were not so propitious, the chief adverse influence being the weather, which, for one thing, practically isolated the northwestern section of the country, while floods in the Ohio valley in March retarded the outputs of iron and steel lines and hampered traffic movements. Despite all of these retarding factors each month of the quarter returned gains, that for January being 2.4 per cent., that of February 2 per cent., and that for March 8 per cent., on a total of $76,623,443. These increases really seem moderate until the fact is recalled that January, 1906, showed an advance of 19.4 per cent., while February contributed one of 25.6 per cent. and March one of 9.5 per cent. Speaking of results for March this year, it is worth noting that receipts of grain, the movement of which had been very backward, underwent considerable expansion.

It is a little too early to obtain conclusive data as to the actual outcome of gross earnings for the first quarter, but, nevertheless, we have sufficient facts with which to reflect the trend during that period.

This table, giving the returns so far made, tells the statistical story of gross earnings for the first three months of this year and last:

	1907	1906	*Increase*	*P. ct.*
January	$69,909,545	$68,272,841	$1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
First quarter.	208,380,135	199,801,204	8,578,931	4.2

In some respects the separate monthly reports are more interesting than those covering a lump period. Thus, by taking the latest monthly returns one may obtain a better idea of the situation as it develops; or, in other words, one can more readily measure the pace of the currents or cross currents, as the case may be. For those reasons the following table covering earnings for March will prove instructive:

	1907	1906	*Inc.*
Northwestern	$7,553,892	$7,041,631	7.2
Central-western	14,099,409	13,787,169	2.2
Trunk lines	18,395,515	17,407,164	5.6
Southern	13,189,017	12,462,427	5.7
Southwestern	10,482,038	8,900,790	17.7
Pacific	12,903,512	11,316,105	14.0
Total	76,623,443	70,915,286	8.0

It will be seen that the total is $76,623,443, as against $70,915,286 for March, 1906, that gains are the rule, the heaviest being those of 17.7 per cent. and 14 per cent. reported by the southwestern and Pacific groups respectively. Then follows the gain of 7.2 per cent. returned by the northwestern roads, this increment being very significant, because it shows that traffic conditions in that section have again become normal, after a winter of blockades. The southern roads report an accretion of 5.7 per cent., while the trunk lines return one of 5.6 per cent. The smallest increase is that of 2.2 per cent. contributed by the central-western lines.

This table shows the trend of gross earnings, month after month, for a series of years:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	..	11.7	8.7	4.5	14.3	11.2	8.9
May	..	14.7	9.5	3.5	12.0	9.0	9.2
June	..	13.3	6.3	.6	14.1	8.1	6.8
July	..	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11.2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	6.9	*1.4	11.5	8.0	10.5

* Increase. † Decrease.

The more important individual gains in gross earnings for March this year, as compared with those of March, 1906, are set forth in the following:

Canadian Pacific	$1,047,000
Louisville & Nashville	544,934
Missouri, Kansas & Texas	500,902
Texas & Pacific	417,619
Great Northern system	373,684
Northern Pacific	346,470
Illinois Central	341,279
Grand Trunk system	303,259
New York Central	289,800
Colorado & Southern	198,692

Cleveland, Cincinnati, Chicago & St. Louis	105,667
Wabash	103,150
Total	$5,699,782

Having touched on the record for March and the first quarter ending therewith, it becomes apropos to get a line on results for the elapsed nine months of the fiscal year. Therefore this table of gross earnings is instructive:

	1906-07	1905-06	*Increase*	*P. ct.*
July	$80,800,673	$70,805,720	$9,994,953	14.1
August	78,771,383	69,593,637	9,177,746	13.1
September	79,270,463	72,521,836	6,748,627	9.3
October	86,650,834	77,911,337	8,739,497	11.2
November	86,842,493	82,983,127	3,859,366	4.6
December	83,007,364	78,548,032	4,459,332	5.7
January	69,909,545	68,272,841	1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
Nine mos.	703,723,345	652,164,893	51,558,452	7.9

Reports of practically identical roads show that gross receipts in the nine elapsed months of the fiscal year 1906-07 aggregated $703,723,345, the gain over the similar period in 1905-06 being $51,558,452, or 7.9 per cent.

A DOWNWARD SWING IN COMMODITY VALUES.

The general level of commodity values showed a downward swing during March, the first recorded since July 1, 1906, since which date, and until March 1, 1907, the course of prices had been steadily upward, month by month. For the first time in many months the number of products declining in price on April 1, as compared with March 1 this year, greatly exceeded those advancing, and while seasonal changes may be credited with many of these declines, it seems certain that other causes must be sought to explain the lowering of others. In fact, while the change in the general level downward was a comparatively slight one, the circumstances were such as to give importance to the movement, and what may ultimately prove to have been a change in general trade tendencies was thus initiated.

BRADSTREET'S approximate index number on April 1, 1907, was $8.8740, a decrease of 1.8 per cent. from March 1, 1907, and a falling off of four-tenths of 1 per cent. from January 1, 1907. Compared with the level of values on April 1 a year ago, a gain of 6.9 per cent. is, however, still shown, and the gain over April 1, 1905, is fully 10.9 per cent. It might be noted, however, that the increase over the level reached on February 1, 1900, is only 7.7 per cent., while the increase from the abnormally low level touched on July 1, 1896, is 55.6 per cent. Fluctuations in the index number in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Oct. 1, 1905	$8.2298
July 1, 1896	5.7019	Nov. 1, 1905	8.2097
Jan. 1, 1897	6.1164	Dec. 1, 1905	8.3014
July 1, 1897	5.8537	Jan. 1, 1906	8.3289
Feb. 1, 1900	8.2307	Feb. 1, 1906	8.2415
June 1, 1901	7.4181	Mar. 1, 1906	8.2321
Dec. 1, 1902	8.1413	April 1, 1906	8.2987
Aug. 1, 1903	7.7473	May 1, 1906	8 3054
Feb. 1, 1904	8.0973	June 1, 1906	8.3203
July 1, 1904	7.6318	July 1, 1906	8.2835
Jan. 1, 1905	8.0827	Aug. 1, 1906	8.3379
Feb. 1, 1905	8.0805	Sept. 1, 1906	8.4528
Mar. 1, 1905	8.0976	Oct. 1, 1906	8.5580
April 1, 1905	7.9996	Nov. 1, 1906	8.7509
May 1, 1905	7.9700	Dec. 1, 1906	8.9023
June 1, 1905	7.9073	Jan. 1, 1907	8.9172
July 1, 1905	7.9160	Feb. 1, 1907	8.9953
Aug. 1, 1905	8.1111	Mar. 1, 1907	9.0393
Sept. 1, 1905	8.2795	April 1, 1907	8.8740

This table gives the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Feb.* 1, 1900	*Apr.* 1, 1906	*Mar.* 1, 1907	*Apr.* 1, 1907
Breadstuffs	$0.0524	$0.0658	$0.0781	$0.0817	$0.0825
Live stock	.1855	.2500	.3275	.3315	.3315
Provisions	1.3619	1.8033	1.8705	2.1049	1.9801
Fruits	.1210	.1472	.1478	.2003	.2057
Hides and leather.	.8250	1.1725	1.1500	1.1975	1.1800
Textiles	1.5799	2.5065	2.5447	2.7369	2.7431
Metals	.3757	.6148	.7130	.8466	.8290
Coal and coke	.0048	.0067	.0072	.0080	.0074
Oils	.2082	.3284	.3028	.3428	.3518
Naval stores	.0402	.0807	.1076	.1170	.1110
Building materials	.0716	.0973	.0898	.0906	.0894
Chem. and drugs	.6607	.9260	.7017	.7083	.7083
Miscellaneous	.2150	.2315	.2580	.2732	.2542
Total	5.7019	8.2307	8.2987	9.0393	8.8740

Seven groups of staples—provisions, hides and leather, metals, coal and coke, naval stores, building materials and miscellaneous products—decreased during March, while breadstuffs, fruits, textiles and oils advanced, and two groups—live stock and drugs and chemicals—remained unchanged. Of the groups showing changes, that of provisions made by far the most notable departure, and here the idea of seasonal changes being responsible gets chief support. The table of individual changes, perhaps, makes the position clearer, and the situation of 106 products on April 1, as compared with March 1, is shown by the following table:

APRIL 1, 1907, COMPARED WITH MARCH 1, 1907.

INCREASES.

Wheat	Silk	Petroleum, refined
Barley	Standard sheetings	Castor oil
Horses	Cotton sheetings,	Olive oil
Rice	southern	Rosin
Peas	Steel billets	Opium
Lemons	Petroleum, crude	Paper
Jute		

DECREASES.

Corn	Mackerel	Tin
Oats	Coffee	Anthracite coal
Flour	Tea	Connellsville coke
Beeves	Beans	Cotton-seed oil
Hogs	Cranberries	Turpentine
Beef, carcasses	Raisins	Brick
Mutton	Currants	Yellow pine
Eggs	Hides	Spruce timber
Beef	Hemlock leather	Quinine
Pork	Cotton	Hops
Bacon	Hemp	Rubber
Hams	Flax	Tobacco
Lard	Pig iron, eastern	Ground bone
Butter	Silver	

UNCHANGED.

Rye	Wool, Australian	Lime
Sheep, live	Print cloths	Nails
Hogs, carcasses	Ginghams	Glass
Milk	Iron ore	Hemlock timber
Bread	Pig iron, southern	Alum
Cheese	Pig iron, Bessemer	Bicarbonate soda
Codfish	Steel rails	Borax
Sugar	Tinplates	Carbolic acid
Molasses	Steel beams	Caustic soda
Salt	Copper	Nitric acid
Potatoes	Lead	Sulphuric acid
Apples	Quicksilver	Phosphate rock
Peanuts	Bituminous coal	Alcohol
Union leather	Southern coke	Hay
Oak leather	Linseed oil	Cotton seed
Wool, O. and Pa.	Tar	

It will be seen that forty-one products declined, while eighteen advanced and forty-seven remained unchanged. Thirteen of the forty-one declining in price belonged to the provisions and groceries group, and of these the declines in eggs, hog products and butter may be classed as seasonal. The decline in eggs was unquestionably helped by record receipts. The advance in barley explains the slight gain in the breadstuffs group, while quieter demand accounts for the lowering of hides and hemlock leather. Dried fruits declined, while lemons advanced. Raw textiles were easier, but cotton goods advanced. The decline in anthracite coal was a seasonal one, but that in coke was due to enlarged deliveries. The easing in building material is claimed to be largely a reflection of quiet in new building construction at New York. Crude rubber showed a notable decline, and coincidently demand for manufactured rubber eased up. The advance in steel and easing of pig iron pointed to cross currents in demand for finished and crude materials. Petroleum showed notable strength, as did paper, which trade reports demand unflagging. Altogether, it will be seen there were enough contrary movements to prevent broad generalization under any one cause; and in connection with the matter of seasonal changes it might be noted that the April 1 level of prices a year ago showed an advance over that of March 1, 1906, of eight-tenths of 1 per cent., whereas this year the decline was 1.8 per cent. Compared with the level of prices on April 1, 1906, the following changes are noted:

APRIL 1, 1907, COMPARED WITH APRIL 1, 1906.

INCREASES.

Corn	Raisins	Lead
Oats	Currants	Tin
Barley	Hides	Connellsville coke
Beeves	Hemlock leather	Southern coke
Hogs	Oak leather	Petroleum, crude
Horses	Jute	Petroleum, refined
Hogs, carcasses	Silk	Cotton-seed oil
Milk	Flax	Castor oil
Beef, family	Print cloths	Olive oil
Pork	Standard sheetings	Rosin
Bacon	Ginghams	Turpentine
Hams	Cotton sheetings,	Tar
Lard	southern	Lime
Butter	Iron ore	Nails
Cheese	Pig iron, eastern	Glass
Mackerel	Pig iron, southern	Alcohol
Molasses	Pig iron, Bessemer	Opium
Salt	Steel billets	Quinine
Rice	Tinplates	Tobacco
Peas	Steel beams	Paper
Peanuts	Silver	Hay
Lemons	Copper	Cotton seed

DECREASES.

Wheat	Beans	Bituminous coal
Rye	Potatoes	Linseed oil
Flour	Apples	Brick
Sheep, live	Cranberries	Yellow pine
Beef, carcasses	Cotton	Spruce timber
Mutton	Hemp	Hops
Eggs	Quicksilver	Rubber
Coffee	Anthracite coal	Ground bone
Tea		

UNCHANGED.

Bread	Steel rails	Carbolic acid
Codfish	Hemlock timber	Caustic soda
Sugar	Alum	Nitric acid
Union leather	Bicarbonate soda	Sulphuric acid
Wool, O. and Pa.	Borax	Phosphate rock
Wool, Australian		

Notwithstanding the decline in the past month, it will be seen that sixty-five products are higher, while only twenty-five are lower than a year ago.

A GOOD WHEAT-CROP REPORT.

The crop reporting board of the Bureau of Statistics of the Department of Agriculture, from the reports of the correspondents and agents of the bureau, finds the average condition of winter wheat on April 1 to have been 89.9, as against 94 on December 1, 1906, 89.1 on April 1, 1906, 91.6 at the corresponding date in 1905, and 85.3 the mean of the April averages of the last ten years. The following table shows for the principal winter-wheat states the averages of condition on April 1, the corresponding averages one year and two years ago, and the mean of the correspondiug averages of the last ten years:

	Apr. 1, 1907	*Apr. 1,* 1906	*Apr. 1,* 1905	*10-yr. av'ge*
Kansas	99	85	92	88
Indiana	81	92	92	79
Missouri	96	85	91	85
Ohio	83	93	89	80
Nebraska	99	91	95	89
Illinois	95	91	90	82
Pennsylvania	95	91	92	88
California	80	91	100	92
Oklahoma	76	90	88	87
Texas	51	91	92	84
Michigan	81	82	94	81
United States	89.9	89.1	91.6	85.3

The average condition of winter rye on April 1 was 92, against 90.9 on April 1, 1906, 92.1 at the corresponding date in 1905, and 89.2 the mean of the April averages of the last ten years.

Several features are brought out in this report. One is that the wheat on April 1 this year shows a reduction from the condition on December 1, 1906, of 4.1 per cent., as against 5 per cent. decline shown in the exceptionally mild winter of the preceding year. This would point to the damage by winter-killing not exceeding a year ago, when 1,718,000 acres were reported abandoned. The area planted in December, 1906, was 31,664,574 acres, and if the same area is lost this year, a final producing area not far from 30,000,000 acres would be indicated. On the other hand, there is a large area reported abandoned in Texas owing to bug damage, which cannot be definitely fixed upon until the May report to the Department of Agriculture. The following table shows the area in winter wheat sown and abandoned each year since 1900:

	Sown in autumn	*Abandoned in spring*	*Finally reaped*
1906	31,664,574	.....	.....
1905	31,340,837	1,718,000	29,599,961
1904	31,155,313	1,432,000	29,864,018
1903	32,016,285	4,932,000	26,865,855
1902	34,070,000	964,000	32,510,510
1901	31,971,000	4,868,000	28,581,426
1900	30,282,564	2,015,000	30,239,701
1899	30,148,473	3,563,000	26,235,000

In the absence of definite statistics as to area abandoned for one reason or another, it is, of course, futile to make estimates of quantitative yield. Thus, in Texas 1,266,000 acres were planted to wheat in December, 1906. Of this nearly one-half is claimed to have been destroyed by bugs, and color is lent this by the government report that the condition on April 1 in that state was only 51, as against 94 in December last year and 91 in April, 1906. The figures of production in 1906 in the leading surplus winter-wheat producing states, with the condition on April 1 this year and last, are shown in the following table:

	Area planted Dec., 1906	*Crop of* 1906	*Condition April 1,* 1907	1906
Ohio	2,214,503	43,202,000	83	93
Michigan	963,200	13,644,000	81	82
Indiana	2,778,750	48,081,000	81	92
Illinois	2,357,500	38,536,000	95	91
Missouri	2,317,520	31,735,000	96	85
Nebraska	2,247,000	52,289,000	99	91
Kansas	5,930,080	81,831,000	99	85
Oklahoma	1,234,902	18,664,000	76	90
Texas	1,266,355	14,126,000	51	91
Pennsylvania	1,659,144	29,073,000	95	91
California	1,668,756	26,883,000	80	91
Total	24,637,687	398,064,000	85 1	89.3
Total United States	31,664,574	492,462,326	89.9	89.1

It may be said for the above figures that they indicate irregular conditions, in that the states east of the Mississippi, except Illinois and Pennsylvania, show lower conditions than a year ago, while, on the other hand, the great surplus states of Kansas and Nebraska show much better conditions than a year ago, as does also Missouri, while the southwestern states are in poor shape. Prevailing estimates of final yield, with the item of abandoned acreage yet unsettled, are, more than ordinarily, therefore guesswork; the more so that bug and dry weather damage is reported since April 1, the date of the government report. The most flattering estimate of yield is 493,974,000 bushels, which is a trifle more than was finally harvested last year, and 20,000,000 bushels more than was indicated by the April 1 report a year ago.

THE RECOVERY IN BOND PRICES.

Among the significant and discouraging features in the securities market from last summer onward was the lack of demand for bonds of both railroad and industrial companies and the recessions in the prices for that class of investments which accompanied the narrow money market, and the high rates of interest which prevailed with but brief intervals in the loan markets of the United States. The fact that railroad corporations were in so many cases obliged to issue short-term notes bearing what would be ordinarily regarded as extremely high rates is one of the circumstances which indicate the inability of such concerns to sell long-term bonds bearing 4 per cent. annual interest at satisfactory or normal prices. Another indication of the same kind was the way in which certain American companies, usually regarded as possessing unimpeachable credit in the home market, were forced to seek buyers for their obligations in a comparatively new direction, witness the placing of the Pennsylvania and the New Haven bond issues with Parisian bankers and investors. The bond market, in short, was for months dominated by high rates for money and the consequent suspension of the investment demand for securities of that class. Conditions in this respect are also exemplified by the fact that up to a fortnight ago the transactions in bonds since January 1, 1907, at the New York Stock Exchange, aggregated, in the par values of the recorded transactions in them, $137,000,000, against $215,000,000 in the same period in 1906. Besides this, as has already been pointed out in these columns, there was a total absence of the demand for bonds which usually marks the month of January, and which is one of the customary results of the reinvestment by corporations and individuals of income received upon their holdings of securities at the beginning of the year.

It is accordingly to be regarded as a rather encouraging sign that with the advent of better conditions in the loan market, such as have signalized the past fortnight, there should have been not only an increase in the activity in bonds but a tendency of such securities to appreciate in a rather decided manner. The movement in question, together with the recession from the high prices recorded for a number of leading investment and speculative issues of this class, is shown in the following tabulation, which gives the high prices of 1906, the low prices reached in the depression, and the high figures of the recovery during the last couple of weeks:

	High, 1906	*Low,* 1907	*High, present week*
Atchison gen. 4s	104½	86½	1.05⅝
Atlantic Coast Line 4s	102½	92¾	95½
Baltimore & Ohio gold 4s	105½	98⅛	100½
Chesapeake & Ohio gen. 4½s	109	90⅞	103
Chic., Rock Island & Pac gen. 4s	103¼	98¾	100¼
Chic., R. I. & Pac. refunding 4s	97	89	90¾
Chic., R. I. & Pacific col. trust 4s	81½	68	73
Cleve., Cin., Chic. & St. L. gen. 4s	105⅜	96⅛	100
Erie gen. lien 4s	93½	80	83½
Great Northern-Northern Pacific-Burlington col. trust joint 4s	101⅞	89¼	96⅛
Louisville & Nashville unified 4s	104¼	97	100¼
Missouri, Kansas & Texas 1st 4s	103	95	97½
New York Central 3½s	99¾	90	93½
Norfolk & Western con 4s	102⅞	97¼	98¼
Pennsylvania convertible 3½s, 1915	101	88½	97⅞
Reading gen. 4s	104⅝	94¾	97½
Southern Pacific refunding 4s	97⅝	90¾	93¼
Southern Railway cons. 5s	119⅛	108¾	111½
Union Pacific 1st 4s	106¾	99⅜	102
United States Steel 2d 5s	101⅛	94½	99
Wisconsin Central 4s	95	86	87

It must be recognized, of course, that the slump in bond values had no proportion to the declines in the stock list. The comparative lack of speculative holdings of the former resulted in their being no material for liquidation, such as proceeded in a slow way in the stock market from early in January last to the beginning of March, and in the last named month resulted in a break in stocks which almost reached the dignity of a panic. At the same time the fact that bond values in many cases had reached a level at which the income return was attractive had not escaped attention even when the current rates for money were high. It is therefore entirely natural that with the easing of money rates, which has resulted from the action of the Treasury, there should appear to be a revived demand for bonds, such as is referred to above and shown in the tabulation of bond quotations. How much further this movement can or will extend is a mooted point in stock-market circles. It would, however, seem that, in spite of the attacks on railroad corporations and the distrust as to their stocks that is making itself felt, it is recognized that bonds well secured and based on mortgages upon such properties offer many advantages, not the least of these being that the holders thereof are creditors and not partners in the enterprises.

LARGER WHEAT STOCKS.

The statistics of wheat supply on April 1 this year tend to the bearish side both in this country and Canada, and though the changes that way are slight, they are significant, because they point to increases rather than decreases, usual at that period. Thus, in the United States and Canada, taken as a whole, there was an increase shown in the total supply during March of about 1,000,000 bushels, as against decreases of four times this amount shown in the same period of the three preceding years. This is, of course, largely explained by the final breaking of the freight congestion and the increase in primary movement of grain made possible thereby. In European stocks, too, there was a slight increase in supplies, due mainly to the increase on passage item, though it might be stated that the gain in European stocks was not as large as was shown one or two years ago. The following figures show the American and European stocks of wheat on the first of each month since January 1, 1905, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,0	83,0	88,1	86,7	163,4	163,5	138,6
April 1	81,4	71,5	46,4	83,6	90,7	89,8	165,0	162,2	136,2
May 1	....	55,2	38,5	....	87,7	86,2	....	142,9	124,7
June 1	....	43,7	29,0	....	82,7	82,4	....	126,4	111,3
July 1	....	36,4	20,3	....	74,7	80,2	....	111,1	100,5
August 1	....	43,1	20,9	....	65,3	72,1	....	108,4	93,0
Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

The combined American and Canadian supply on April 1, 1907, was 81,363,000 bushels, a gain of 989,000 bushels over March 1, and comparing with decreases of about 4,000,000 bushels in the same period of the preceding three years. European supplies on April 1 this year aggregated 83,600,000 bushels, as against 83,000,000 bushels on March 1, an increase of 600,000 bushels. A year ago, however, the increase was 2,600,000 bushels, and two years ago the increase was 3,100,000 bushels. The European and American supply April 1 was 165,000,000 bushels, a gain of 1,600,000 bushels over March, as against a decrease of 3,600,000 bushels a year ago and 2,400,000 bushels in 1905. Compared with a year ago American and Canadian stocks are 12,200,000 bushels larger, and the increase over 1905, same date, is 35,000,000 bushels. European stocks are 7,100,000 bushels smaller than a year ago and 6,200,000 bushels smaller than in 1905. The aggregate world's supply is 2,800,000 bushels larger than a year ago and 28,800,000 bushels larger than in 1905.

The detailed statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on April 1, 1907, compare with the same period of the three preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
April 1, 1907	79,702,000	1,661,000	81,363,000
April 1, 1906	66,599,000	4,947,000	71,546,000
April 1, 1905	45,365,000	2,486,000	47,851,000
April 1, 1904	46,639,000	2,472,000	49,111,000

There are some features about the monthly statistics of American and Canadian wheat stocks, however, which will bear elucidation. These figures, as a whole, point to little or no shrinkage in the stocks held at visible supply points in both countries since the first of the year, whereas one and two years ago there were quite marked decreases. If the stocks held in the two countries are divided up and given in detail, a rather interesting showing is made. Following is such a showing:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	51,474,000	29,889,000	81,363,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	50,087,000	21,459,000	71,540,000

Here, it will be seen, stocks in the United States, east and west of the Rocky moun-

tains, have decreased 7,714,000 bushels from January 1 to April 1, while stocks in Canada gained 5,840,000 bushels, the net change being a decrease of 1,874,000 bushels in all stocks. A year ago American stocks decreased 7,585,000 bushels, while Canadian stocks increased 1,986,000 bushels, the net change in four months being a decrease of 5,599,000 bushels.

NEW YORK CENTRAL'S YEAR.

In last December the New York Central & Hudson River Railroad Company issued a preliminary report of its operations for 1906. The figures were published at the time in these columns, but as they were partly estimated with regard to the last months of the year, they of course did not give a complete view of the operations of the property during the period in question. A full pamphlet report of the company has, however, been made public this week and has created a very favorable impression on all sides, the results being, indeed, the best in the history of the company. The figures compare as follows with those of the year 1905:

	1906	1905	*Increase*
Gross earnings	$92,089,769	$86,095,602	$5,994,167
Operating expenses	64,953,695	59,968,029	4,985,666
Net earnings	27,136,074	26,127,573	1,008,501
Other income—			
Div. on Lake Shore & Mich. Southern stock.	4,377,956	3,623,186	754,820
Div. Mich. Cent. stock..	812,691	672,572	140,119
Div. and int. other sec ..	1,647,926	1,329,935	317,991
Int. loans, notes, etc	869,165	897,856	†28,691
Total	7,707,738	6,523,499	1,184,239
Total income	34,843,812	32,651,072	2,192,740
Int. rents and taxes	22,567,904	22,242,502	325,402
Balance	12,275,908	10,408,570	1,867,338
Res. for redemp. 4 per cent. gold deb. of 1890 .	....	150,000	†150,000
Balance avail. div...	12,275,908	10,258,570	2,017,338
Dividends*	7,832,884	6,612,500	1,220,384
Surplus	4,443,024	3,646,070	796,954
New constr'n and equip.	1,308,261	1,532,722	†224,461
Surplus	3,134,763	2,113,348	1,021,415
Special imp. fund, discount and uncol. chges	3,115,329	2,095,095	1,020,234
Final surplus	19,434	18,253	1,181
Previous surplus	14,612,120	14,593,867	18,253
Profit and loss surp..	14,631,554	14,612,120	19,434

* 1906, 5¼ per cent. on 1,491,978 shares; 1905, 5 per cent. on 1,322,500 shares. † Decrease.

The increase of $5,994,000 in the gross earnings, equivalent to about 6 per cent., and of $1,000,000 and more in the net are, however, not as important as the gain of $1,184,000 in income from other sources, representing the dividends received upon the New York Central's holdings in securities of other corporations. For instance, dividends upon its Lake Shore stock were $754,000 greater than the year before, while the gain in the dividends from miscellaneous securities, including holdings of other railroads, increased $317,000. In this respect the showing is a gratifying one, tending as it does to prove the wisdom of the course adopted by the Central's management a few years ago, when ownership of the shares of the other roads, constituting the so-called Vanderbilt system, was taken over. It will also be noted that the fixed charges are only $325,000 larger than the same item in 1905, and that the balance of income available for the payment of dividends upon the stock increased no less than $2,017,000. In fact, the amount earned in excess of charges, which was $12,275,000, was equal to nearly 7 per cent. upon the outstanding stock, as compared with 5¾ per cent. the year before.

The other interesting portion of the report relates to further acquisitions of stocks by the New York Central. Among the items of this kind was the purchase of 60,000 shares of the Mohawk Valley Company, which is the holding concern that has taken over the control of the various electric railways in the Central's territory, which were some time before acquired in the interest of the latter corporation. It is to be noted that no less than 5,700 shares of Boston & Maine stock were acquired, which fact, although it does not by any means tend to bear out recent reports that the Central was about to gain control of the property in question, would point to a desire on the part of its management to bring about something akin to a community of interests in northern New England territory.

BUSINESS CONDITIONS IN MEXICO.

To the Editor of BRADSTREET'S:

SIR—Trade conditions are favorable, and a large volume of retail business was done during the tourist season. Demand for American goods continues active, particularly for hardware, agricultural implements, mining supplies, boots and shoes, phonographs and novelties. The rapid development of the country, with consequent advance in wages, is steadily raising the standard of living, and merchants in the interior report increasing sales of what were, till recently, considered luxuries.

The large retailers throughout the republic are still mainly foreigners, with Spaniards predominating. Americans and Englishmen seldom are storekeepers, their investments being in mining, banking, manufacturing and transportation. Frenchmen are the principal distributers of dry goods; Germans preponderate in the hardware, clothing and drug trades, while Spaniards are the most prominent dealers in general merchandise and groceries. In interior towns and villages the principal storekeepers are nearly always Spaniards, although Mexicans may conduct the minor establishments. All merchants speak Spanish, and that language should be employed in seeking their trade, whether by traveling salesmen, price lists or circulars. Large exporters to Mexico generally find it necessary to have a local agent, as the average retailer dislikes the trouble regarding customs, duties, etc., consequent upon direct importations. European wholesalers give much longer credit than Americans, and not infrequently finance their customers, but American importations continue to increase, owing to superiority of manufacture and facilities for speedy delivery.

Based upon some incomplete statistics issued by the Mexican Minister of Finance, it is estimated that foreign capital to the amount of $120,000,000 was invested in Mexico during the twelve months ending June 30, 1906. In this city three new banks are in contemplation, and it is reported that one of those already established is about to change hands. The members of the Mexico City Clearing House are considering the project of organizing an official stock exchange, to operate under a charter from the government. It is to be borne in mind, however, that, according to the commercial code, brokers must be Mexicans by birth or naturalization, and this would prevent the active control of such an exchange by foreign interests. In the local stock market the principal transactions have been in mining securities, and these were heretofore listed somewhat irregularly.

The general tone here is one of great confidence, in spite of indications of probable labor troubles in the near future. The fall in the price of silver seems to cause no alarm, as it is believed that the scarcity of currency throughout the world will stimulate the demand for the white metal.

Mexico City, April 6. T.

EDITORIAL NOTES.

In his annual message to the Mexican Congress, President Diaz makes lengthy references to the position and prospects of the railways in the republic. To the American financial public the most important of these relates to the proposed merger of the Mexican Central and the National Railroad Company of Mexico. On this subject the President states that the unsettled condition of the foreign money markets, and the necessity of careful consideration as to the manner in which the arrangements to the above end are to be carried out, has necessitated delay. It is, however, presumable that the financial element in the matter had the greatest weight, and it is significantly added that the documents have already been prepared, the hope being also expressed that within a few weeks the needed necessary decrees will be issued and the merger consummated. As to the progress of railways in Mexico, President Diaz refers to the completion and opening of the National Tehuantepec Railroad in January last, realizing the plans for affording a short continental railway on Mexican soil, to which many years and costly efforts have been devoted. He also pointed out that the present length of railway systems in Mexico is 21,906 kilometers, or about 14,458 miles, some 200 kilometers of new track having been completed during the past year, while it is also stated that large additions have been made to the rolling-stock equipments of the various roads in the republic. Commenting upon the labor troubles, actual and threatened, which have endangered Mexican industrial progress in various lines, the Mexican Executive, while minimizing the likelihood of any serious troubles, proceeds to remark very significantly that should new disturbances occur he is fully resolved to enforce respect for the rights of all and to preserve public order, sentiments which are in every way decidedly reassuring to the owners of American capital invested in railways and other enterprises in Mexico.

Assertions have been frequently heard of late that remarkable discoveries of gold-bearing districts in southern Nevada promise to open up for the United States an auriferous region which in its productiveness would excel the Transvaal. The richness of the veins which have thus far been developed at certain of the mining camps in the southern portion of the state, and the fabulous profits derived therefrom, have, of course, been calculated to create very sanguine expectations in that respect, due advantage of which has naturally been taken by the enterprising promoters of mining schemes in both the east and west as advertisements of the enormous profits to be derived from infinitesimal investments in their wares for the past year or so, put forth in such profusion. Official scientific investigations of the new Nevada gold districts, notably a preliminary report which has just been issued at Washington, resulting from detailed investigations by the representatives of the United States Geological Survey, would go far, however, toward substantiating the idea that the new discoveries in the region in question will add very materially to the gold output of the United States for some years to come, even if they do not duplicate the phenomenal results which attended the operations of the world-famous Comstock lode mines—the so-called Big Bonanza—of the '70s. It is indeed an open matter whether the discoveries, beginning with that of the Tonopah mines, in 1900, followed in quick succession by similar developments at Goldfield, Manhattan, Bull Frog, Search Light and other camps, will not establish the fact that the once derided sage-brush desert is, in point of mineral wealth, one of the most valuable portions of the United States. Legitimate enterprises, backed by capital and mining experience, are certainly producing most satisfactory results. The Mint statistics show an increase in Nevada's gold output from $5,359,100 in 1905 to $9,815,800 in 1906, as is shown by the estimates for the latter year, while 1907 will doubtless exhibit considerably larger returns. Still it is necessary that the public should realize that, while there is merit in some propositions, in a great number of cases the invitation to participate in the Nevada gold-mining enterprises will be based upon inadequate mining propositions.

Following the recent issue of $5,500,000 of Erie Railroad 6 per cent. notes, on terms which cost that company over 7 per cent. for the use of that amount during one year's time, there has been a good deal of discussion about the course which will be pursued by the Wabash Railroad in regard to the refunding of $6,116,000 of its 5 per cent. notes, which will fall due on May 10. There seemed to be not a little uncertainty as to exactly how the extension of these obligations or their replacement by an issue of fresh notes would be effected. In view of the high rate which the Erie road was obliged to pay, it was generally believed that the Wabash Company would be forced to submit to equally if not more onerous terms. The matter, however, was settled by an announcement made last Wednesday to the effect that a New York banking house had purchased $6,160,000 two-year collateral 5 per cent. notes from the Wabash Company, secured by $6,600,000 of the Wabash Pittsburgh Terminal 4 per cent. bonds and $4,800,000 Wabash Railroad refunding bonds, together with the entire $10,000,000 capital stock of the Wabash Pittsburgh Terminal Railway Company. It is understood that the terms upon which the notes were negotiated make the interest charge upon the amount which the railroad company obtains in the neighborhood of 7 per cent. It is pointed out that there is considerable difference between this transaction and the recent Erie note issue, inasmuch as the latter was based upon merely the credit of the company, whereas the Wabash secures the lenders by the deposit of bonds and stock which at the current market valuations apparently represent a margin of some 40 per cent. upon the loan.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Taxation—Notes—Jurisdiction.

The Supreme Court of the United States, in the case of The Metropolitan Life Insurance Company of New York vs. The City of New Orleans, sustained the constitutionality of the Louisiana law of 1898 making taxable in that state notes taken by non-residents on account of business transacted there.

Exchange Quotations—Control—Property.

The Supreme Court of the United States affirmed, in the case of Hunt vs. New York Cotton Exchange, the decision of the United States Circuit Court for the Western District of Tennessee, enjoining the appellant from receiving or using the quotations of the exchange contrary to the regulations of the latter. It appeared that the appellant had been receiving the quotations prior to 1903, but that the exchange authorities afterward cut him off because he would not sign a contract not to permit their use in bucket shops. The Supreme Court took the ground that quotations gathered by exchanges, boards of trade and similar bodies are property.

Bankruptcy—Void Agreement.

In the case of Devries vs. Orem, decided by the Maryland Court of Appeals, it appeared that the defendant and appellant was a large unsecured creditor of her husband who applied for the benefit of the bankruptcy act. She agreed that if the plaintiff would accept an appointment as trustee she would pay him a sum equal to the difference between 5 per cent. on the proceeds of the sale or sales of the entire assets and the amount he would receive as compensation under the bankruptcy act. Suit was brought on the agreement to recover the extra compensation, but the lower court entered judgment for the defendant on demurrer, and the Court of Appeals affirmed this judgment on the ground that the agreement was null and void, as being against public policy.

Gas Company's Liability—Damages.

The Supreme Court of Minnesota held, in the case of Gould et al. vs. Winona Gas Company, that the liability of a gas company in damages to the owner of trees on a boulevard in front of his premises, caused by the escape of gas from mains on streets, was not determined by the doctrine of insurance of safety, but by principles of negligence applicable to authorized public works; that where such damage was caused by a leak due to the action of frost in the winter, and the escape of gas was not discovered by the company until June of the same year, the maxim resipsa loquiten applied; that the failure of the trial court to give the plaintiff the benefit of the maxim was reversible error, and that the care to be exercised by the gas company was not extraordinary care, but due care or care commensurate with the danger.

City—Snow—Action—Notice.

A city charter contains a provision to the effect that no civil action "shall be maintained for damages or injuries to the person sustained in consequence of the existence of snow or ice upon any sidewalk, crosswalk or street unless written notice thereof relating to the particular place was actually given to the Common Council, and there was a failure or neglect to cause such snow or ice to be removed, or the place otherwise made reasonably safe within a reasonable time after the receipt of such notice." The New York Court of Appeals held, in the case of MacMullen vs. The City of Middletown, that the provision was a valid condition and violated no constitutional right; that being a valid enactment it was essential that compliance with its terms should be alleged in a complaint in an action for damages from falling on the walk where ice and snow had accumulated, and that the legislature may grant or deny a remedy by private action for the breach of a duty imposed upon the municipality and affix conditions where the right to an action is given.

Extradition—Imprisonment—Offense.

The Supreme Court of the United States held, in the case of Johnson, Warden, vs. Browne, that a fugitive from justice in the United States who had been extradited from Canada on one charge could not be imprisoned on another. Browne was indicted on two counts, one charging conspiracy and the other assisting in securing the importation of silks at less than the legal rate of duty. He was tried on the first charge and sentenced to imprisonment for two years. Subsequently, while the case was under consideration in the higher courts, he fled to Canada. The Canadian courts refused to extradite him on the ground that conspiracy was not an offense covered by the extradition treaty. He was then extradited on the charge of violating the revenue laws and was again given in custody to the prison authorities on the conviction for conspiracy. He was released on a writ of habeas corpus on the ground that under the treaty he could not be imprisoned for another offense than that on which his extradition had been secured. This decision has now been affirmed by the Supreme Court of the United States.

Carriers—Delay—Joint Liability.

The Kentucky Court of Appeals held, in the case of The Cincinnati, New Orleans & Texas Pacific Railroad Company vs. Greening, that in an action for damages for injury to stock by delay in their transportation, where unreasonable delay was established beyond question by evidence as to the time of their delivery and of their arrival at their place of destination and the usual time to make the journey, this evidence could not be overcome or weakened by statements of the employees of the carrier that they were transported without unreasonable delay; that where stock was in good condition when received by the carrier, and was in its exclusive custody, unaccompanied by its owner, the burden of proof was on the carrier, where the stock was injured, to show that such injuries were not attributable to its negligence; and that in a joint action against two carriers for injury to stock, where it was shown that each of them carried the stock a part of the way, and both of them denied negligence, the burden being on both of them to exonerate themselves, and the jury were unable to separate the liability, they properly found a joint verdict against both carriers for the damages proven.

Contract—Time—Wages—Notice.

The Supreme Court of Louisiana held, in the case of Noyes vs. Noullet et al., that where in a suit for a balance alleged to be due under a contract for work, the defendant claims a reduction on account of work done by him, which he alleges the contractor should have done, and the contractor denies that his contract required him to do such work, the reduction will be allowed if it be found that the contract called for the work; that a contractor has no right to do work called for by a subcontract at the expense of a sub-contractor without notice to the latter, and that when a sub-contractor is familiar with the demands of the main contract, with reference to the time within which it is to be executed, he will be held to a reasonable execution of his sub-contract, considered with reference to such demands, even though his sub-contract contains no stipulation as to time. The court further held that wages of workmen and hire of machinery kept idle by unreasonable delay in the execution of a sub-contract are elements to be considered in a suit by the contractor for damages, but that ordinarily a general contractor engaged in executing and at liberty to obtain other contracts cannot recover for loss of his own time in such a case, nor for alleged injury to his business reputation, nor hypothetical damages, which could not have entered into the contemplation of the parties when the sub-contract was made.

Notary Public—Negligence.

In the case of Bernard et al. vs. Schuler et al., which was an action against a notary public for damages claimed to have been sustained by reason of an alleged false certificate of acknowledgment made by him, the Supreme Court of Minnesota held that the taking of the proof or acknowledgment of the execution of an instrument by an officer is an act ministerial in its nature and not a judicial one; that a notary public or other officer cannot legally or honestly certify to the acknowledgment of a party unless he personally knows him, or has satisfactory evidence of the fact that he is the identical person described in and who executed the instrument; that a notary public in Minnesota is not a guarantor of the absolute correctness of his certificate of acknowledgment, and does not undertake to certify that the person acknowledging the instrument owns or has any interest in the land therein described, but that he does undertake to certify that the person personally appearing before him is known to him to be the person named in and who executed the instrument, and, finally, that if a notary public certifies to an acknowledgment of an instrument without personal knowledge as to the identity of the party appearing before him, and without a careful investigation of such fact, he is guilty of negligence, and he and the sureties on his bond are liable for all damages proximately resulting therefrom.

BUSINESS NOTES.

Production of Beet Sugar.

Beet-sugar factories in the United States completed the season of 1906-07 with a total production of 433,000 tons of sugar, an increase of about 52 per cent. over the previous season's outturn. In explanation of the increase it may be stated that ten more factories were running than were in operation during the preceding crop; that there was an increase of 58,487 acres in the sowing, and that the weather throughout the crop was exceptionally favorable. It is understood that good progress is being made in nearly all sections with the 1907-08 crop, but possibly there may be some falling off in some localities, but there will be a good increase elsewhere, and present indications pointing to a rather larger total for the whole country. In the following table, compiled by Willett & Gray, comparative figures show the crops of this season and last. The quantities are given in tons of 2,240 pounds:

	1906-07		1905-06	
	Beets	*Sugar*	*Beets*	*Sugar*
New York	40,895	4,295	34,254	4,235
Wisconsin	142,857	16,071	105,500	11,950
Illinois	8,929	714	5,700	550
Ohio	44,735	3,579	37,795	4,026
Michigan	709,265	79,189	447,242	54,635
Minnesota	35,714	3,661	26,786	2,750
Nebraska	116,832	13,312	98,848	9,379
Montana	62,500	6,696	....	....
Kansas	60,268	6,257	....	....
Arizona	8,036	490	....	....
Colorado	1,318,731	153,295	781,417	93,253
Utah	341,766	36,530	197,075	21,337
Idaho	206,050	25,418	117,695	13,435
Oregon	17,750	1,807	14,716	1,595
Washington	17,857	2,232	17,857	2,321
California	597,887	79,464	455,841	64,251
Total	3,728,072	433,010	2,340,726	283,717

A Hudson Bay Route.

The Hudson bay route as one of the great channels of the world's freight traffic is a possibility suggested by A. P. Low, the Director of the Geological Survey of Canada, who has recently made an expedition through that region. The success of the western Canadian wheat fields depends on cheap transportation, preferably by water. The further population penetrates into upper Saskatchewan and Alberta the longer the rail hauls and consequently the slower its development. All that is needed to open Hudson bay to commercial uses is a line of rails to carry freight to one of its ports. At present the Hudson Bay Company and the Revillon Fur Company have ships that make its various small trading ports a few times a year. On the score of distances this Hudson bay route has much to offer. Regina, the capital of Saskatchewan and an important town on the Canadian Pacific, is just as near Churchill on Hudson bay, the point proposed for a port, as it is to Port William on Lake Superior, and a thousand miles shorter than the distance from Regina to Montreal at the head of sea navigation on the St. Lawrence. The distance from Churchill to Liverpool is almost the same as that from Montreal to Liverpool. Hence there is a saving of distance of one thousand miles of rail or water carriage in favor of this northern route. Automobiling, it is said, has quickened the market for furs and made the quest for them even more zealous than usual this year. The whale fishery also supports two ships in Hudson bay. Flour for the use of dwellers at the ports on this waterway now reaches them from Winnipeg by way of Liverpool, but if steel rails were thrown across the plains to Churchill, it would open a direct trade route to the world. Large areas of wood pulp and merchantable spruce would be tapped; iron ores and copper-bearing rocks have also been found in various places, besides a valuable mica mine.

Copper Statistics.

"Now that the first quarter of the year is over, it is interesting to turn to the statistical position of copper as developed during the last three months," says the *Journal of Commerce*. "We have the government figures of imports and exports; that is, exports for the three months and imports for two months complete, and for the third month, partially. We also have reliable trade estimates of domestic production and of home consumption about as close as is ever obtained. The figures, it is important to note, indicate 10,000 tons more copper available than called for by consumptive requirements, foreign and domestic. The production is estimated at from 10,000,000 to 15,000,000 pounds less than during the first quarter of last year; that is, on the average. Taking the maximum decrease, the output has been about 215,000,000 pounds, or 96,000 gross tons. Imports during January and February, according to government returns, were 20,500 tons. Estimating March at an average of 10,000 tons we have total imports for the first quarter of 30,000 tons, indicating a total supply of 126,000 gross tons. The domestic consumption is estimated from 160,000,000 to 180,000,000 pounds for the three months, or an average of 75,000 gross tons. Exports for the three months have been 30,219 tons, or a total domestic and foreign consumption of American copper of 114,219 tons, or in round figures, making allowance for exports for Pacific and southern ports, of 115,000 tons. This shows a surplus of 11,000 tons, or, making an allowance of 1,000 tons for an error in either estimate of imports or exports, stocks of 10,000 tons to be added to any surplus held January 1. As has been pointed out for the last week or so, buying on domestic account is light, while the principal consumers are well covered for the next quarter. The principal European consumers will have their April-May requirements supplied from visible stocks, and some of them have their June requirements also covered. The principal feature of interest at the moment continues to be the heavy importation movement, including American as well as foreign copper, and some of the best brands, too, are coming back to benefit from the high prices that have been and are prevailing."

New York the National Dressmaker.

According to the *World's Work*, "the most important industry in the state of New York is the making of women's clothes. This fact is disclosed in the last census report, which shows that this industry has moved up to the head of the list, displacing the kindred industry, the making of clothes for men. These two industries together are far and away ahead of any other single industry in the state. They total over $340,000,000. This is within $25,000,000 of the total value of all the products of the steel works and rolling mills of Pennsylvania. Nearly 75,000 people live upon this making of women's clothes, and 53,000 more are engaged in making clothes for men. Out of every hundred people who work in the industrial pursuits in New York state fifteen are engaged in making clothes for men and women. Nearly $62,000,000 were paid out to these workers in one year. New York is the national dressmaker, tailor and haberdasher. Out of every $100 worth of clothing made for women in one year this state produced $70 worth. In collars and cuffs for men New York manufactured nearly 97 per cent. of the entire output of the nation. It may be noted that the value of men's furnishings has fallen behind as compared with 1900."

Building for March Shows Slight Decrease.

Building operations for March in thirty-three of the leading cities show a decrease of 3 per cent. in comparsion with the corresponding period a year ago. During the month permits were taken out in thirty-three cities, according to official reports to *Construction News*, for 10,927 buildings, involving a total expenditure of $44,327,072, against 9,958 buildings, costing $45,834,722, for the same month a year ago, an increase of 969 buildings and a decrease in cost of $1,507,650.

* Loss. † Includes Manhattan and Bronx.

For the elapsed three months of the current year building permits called for a total expenditure of $106,096,372, which compares with $121,735,483 for the first three months of 1906, the decrease being 12 per cent.

CURRENT BUSINESS NEWS.

Commercial.

The fire loss of the United States and Canada in March, compiled by the *Journal of Commerce and Commercial Bulletin*, shows a total of $20,559,700. The following table gives a comparison by months of the losses this year with 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,900
February	25,591,000	18,249,350	[illegible]
March	14,751,400	18,727,750	20,559,700
Total, 3 months	56,720,500	54,700,900	64,501,200

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom and France — The condition of the winter and spring crops is very favorable. Supplies are fair. Germany—Crop news is very variable; some say that there is additional deterioration, while others think the outlook has improved. Supplies of native wheat are scarce and there is a better foreign demand. Hungary—There are continued complaints of damage to the crops, and some estimates report as much as 10 per cent. replowed. Roumania—The weather is cold, with high winds, and seeding, as a result, is greatly delayed. Russia—Some cold weather is mentioned, but, on the whole, the autumn seedings have come through the winter satisfactorily. Spring seeding prospects are fair. Arrivals at the ports are small. Turkey—Crop prospects, on the whole, are rather unfavorable. Italy and North Africa — Crop prospects are generally favorable. Spain—The recent rains have improved the crop outlook. India—In the province of the Punjab the weather is seasonable and the outlook for the crops is favorable. In the United Provinces some damage is reported as a result of rain, wind and rust.

The secretary of the Kansas Board of Agriculture places the condition of wheat in that state at 100 and the acreage at 6,500,000, against 5,131,800 last year.

The Argentina exportable surplus of corn is placed at only 12,000,000 bushels, against 95,000,000 bushels exported in the current crop year.

A report from Birmingham, Ala., indicates that the proposed chain of bonded cotton warehouses, which at the annual meeting of the Southern Cotton Association in January it was determined to establish, is about to become a reality. The plan if carried out will, by cutting out the middleman alone, net a saving to the farmers of the south of $60,000,000 annually. It is announced that the project is being backed by some of the strongest financiers in the south. Under the plan it is proposed to have a system of bonded warehouses covering all the cotton-growing states for the storing of cotton. One company or association will control and direct the entire chain. The parent warehouse will be located in Birmingham. The cotton thus stored will be used as collateral on which loans will be advanced to farmers and planters.

A new modus vivendi for the continuation of certain trade relations between the United States and Germany has been agreed to between the State Department and Baron Speck Von Sternberg. The present agreement between the two countries expires in June, and without a new understanding the United States would be at a disadvantage by reason of Germany's new maximum and minimum tariff. The new agreement is only tentative.

The March statement of the British Board of Trade shows increases of £4,477,100 in imports and £3,071,900 in exports. In the imports the increases included raw materials, of which £2,500,000 was cotton from the United States, and in exports the increases were in manufactured goods, principally iron and steel. From these returns, imported goods reëxported being omitted, the following comparative table of the United Kingdom's March trade in merchandise may be compiled:

	1907	1906	1905
Imports	£57,747,687	£53,270,587	£48,983,312
Exports	34,723,062	31,651,162	28,070,823
Excess imports	23,024,625	21,619,425	20,912,489

The United States Supreme Court, in the case of Hunt vs. the New York Cotton Exchange, holds that the quotations of an exchange are its property and subject to protection.

The Kentucky state report places the condition of wheat at 99, against 99 March 1, 98 a year ago, and 95 at harvest, when the crop was 11,349,000 bushels. This year the acreage is 10 per cent. short.

Third Vice-President George T. Nicholson, of the Atchison, Topeka & Santa Fe Railway Company, is quoted as saying: "I estimate the losses to wheat and oats in the southern tier of counties of Kansas at 20 per cent. I believe that the losses will be spotted throughout the entire state. The bugs are everywhere. In a good many instances, however, they are not doing any damage."

The Missouri state report is much better than expected, the condition of wheat as of April 1 being 94, against 82 in December, 84 last April, and 77 last June, when the crop was 36,000,000 bushels.

On Monday the United States Supreme Court held that the Isle of Pines was not a part of the United States for customs purposes and affirmed the action of the Federal Court at New York, that regular duties should be collected on imports from the island.

An international conference of cotton growers, manufacturers and dealers will be held at Atlanta, Ga., on October 7, 8 and 9 next. Arrangements have been made for an extended tour by special train through the cotton-raising districts by the European and American delegates to the conference. Invitations will be extended to domestic and foreign associations.

The following statements from leading industrial companies were obtained by the *Wall Street Journal:* Standard Oil—Since the first of the year new business has eclipsed all previous records and earnings established a new high record. United States Rubber—Since the first of the year the company's new business has exceeded that of the corresponding period of last year by 30 per cent. Amalgamated Copper—Earnings since the first of the year were larger than in any similar period since the company was organized. United States Steel—New business since the first of the year nearly 10,000 tons a day in excess of the corresponding period of 1906. Corn Products Refining—New business far ahead of last year. Republic-Tennessee Companies—Unfilled tonnage on the books March 31 established a new high record. General Electric—New business in excess of a year ago. International Harvester—New orders since the first of the year far in excess of the corresponding period of last year. Railway Steel Spring—New record established in respect to new business in the month of March. Lackawanna Steel—Steel orders far in excess of corresponding quarter of last year.

This table shows the imports of coffee, tea and cocoa during the eight months ended February, 1907 and 1897:

	8 *mos. ending Feb.*, 1907	8 *mos. ending Feb.*, 1897	*Inc.*, *p. ct.*
Pounds—			
Coffee	647,206,151	466,204,372	38 8

Total	780,981,018	568,155,253	37.5
Values—			
Coffee	$51,869,152	$53,332,608	*2.8
Tea	11,605,058	10,247,506	13.7
Cocoa	8,344,426	1,930,831	332.1
Total	71,819,636	65,510,945	9.5

* Decrease.

An increase of $79,286,689 in the value of cotton exported during the nine months of the present fiscal year, compared with the like period of the previous year, is shown by a bulletin issued by the Bureau of Statistics. The number of bales increased from 5,869,424 to 7,534,686. Provisions, with a total of $160,665,304, showed a comparative falling off of $13,546,939; mineral oils, which aggregated $58,983,444, lost $1,595,396, and breadstuffs, with a value of $131,203,805, lost $15,065,154. For the month of March the exports of breadstuffs and the increase or decrease compared with the same month last year were: Corn, 12,205,630 bushels, decrease 619,447; wheat, 3,119,230 bushels, increase 619,977; flour, 1,249,087 barrels, increase 285,098.

Financial.

At the annual meeting of the Boston Clearing House Association, Monday, Frank Haven was reëlected president, and Arthur Newell, secretary. John P. Lyman was chosen to succeed Harold Murdock of the Clearing House committee. The report showed that the total membership of the association is now twenty-one; the combined capital of the banks, $25,650,000; the surplus, $24,413,000, and aggregate deposits, $209,478,000. The foreign department's total collections during the year were $628,335,761, an increase of $10,508,257.

Directors of the Buffalo, Rochester & Pittsburgh Railway Company have issued a circular letter to stockholders, recommending an issue of $35,000,000 of fifty-year 4½ per cent. consolidated mortgage bonds. The proceeds, according to the circular, are to be used for the consolidation of the company's debt, for extensions, double tracks, improvements, betterments, equipment, etc.

The output of gold at the Rand in March is officially announced as 538,497 fine ounces, against 493,542 fine ounces in February, and 443,723 ounces in March last year. The following table gives the output of gold at the Rand (in fine ounces) in the first three months of the years named:

	1907	1906	1905	1904
January	537,638	428,618	369,258	288,824
February	493,542	407,668	363,811	289,502
March	538,497	443,723	399,823	308,242

State Comptroller Glynn does not believe New York state is getting all of the revenue it should from the stock-transfer tax law. Accordingly he had Senator Allds, as chairman of the Senate Taxation Committee, introduce, on Tuesday, a bill providing that every firm, company, person or corporation conducting or transacting a brokerage business shall keep a just and true book of accounts wherein shall be recorded the date of making every sale, agreement to sell or transfer of shares and every transaction in relation to stock and the names of the parties thereto. Such is to be subject at all times to the inspection of the state comptroller or any of his representatives, between the hours of ten in the forenoon and three in the afternoon. The comptroller may enforce his right to examine the books by mandamus. Violations are misdemeanors, and a penalty of $500 to $5,000 fine and punishment of three months to two years is provided.

City Chamberlain Keenan reports that the collections in the greater city under the new mortgage tax law for the quarter ended March 1 were $1,188,743.98, out of which the city got one-half, or $594,184.49, and the state the rest. The collections of mortgage taxes for the previous quarter were considerably less. Of the receipts of the quarter ended March 1 there were collected in New York county $937,538.99; in Kings county, $203,060.08; in Queens, $41,065.31, and in Richmond, $7,079 60.

Consul F. J. Albert, of Brunswick, reports that the statistics of the Prussian savings banks for the year 1905 have lately been published, and they may be taken as a criterion for the flourishing condition of the whole of Germany. The consul continues: "Never before was the increase in savings-bank deposits in Prussia so great as in that year. According to a statistician, it amounted to $127,120,000 advance over the previous year. In 1870 the entire deposits of the Prussian savings banks were only $117,960,000. In 1905 they amounted to $1,973,880,000. The present annual increase is now greater than the total amount of deposits was a generation ago. Almost 95 per cent. of the books were for amounts up to $714. The increase in the number of bank books in 1905 was 430,931, or nearly twice as great as the rate of increase in the population. The increase of the previous year had even been greater, namely, 439,303 books.

The discount rate of the Bank of England was reduced Thursday from 5 to 4½ per cent., owing to the plethora of money in the market and the large influx of gold into the Bank of England. The 5 per cent. Bank of England rate had been in effect since January 17 last. On that date it was reduced from 6 per cent., the rate that caused such a furore in the financial world when it was fixed on Friday, October 19 last. That abnormal rate was maintained just ninety days, the longest period that a 6 per cent. rate had been in force since 1839. There was a time last year when a 7 per cent. rate was threatened, but this was later found unnecessary. The following table shows the recent changes made by the Bank of England in its official rate:

	P. cent.		*P. cent.*
April 11, 1907	4½	September 28, 1905	4
January 17, 1907	5	September 7, 1905	3
October 19, 1906	6	March 9, 1905	2½
October 11, 1906	5	April 21, 1904	3
September 13, 1906	4	April 14, 1904	3½
June 21, 1906	3½	September 3, 1903	4
May 3, 1906	4	June 18, 1903	3
April 5, 1906	3½	May 21, 1903	3½

The Montreal Stock Exchange has increased the commission rate from one-eighth of 1 per cent. to one-fourth of 1 per cent.

The Moore-Heart-Sill bill, which prohibits speculation in futures and stocks, has been signed by Acting-Governor Moore, of Arkansas.

Railroads.

David Willcox has resigned as president of the Delaware & Hudson Railroad Company, and L. F. Loree, formerly president of the Rock Island, and previous to that president of the Baltimore & Ohio Railroad, has been elected in his stead.

The Union Pacific Railroad has ordered 100 miles more track laid to complete its double track across the state of Wyoming. It will cost $3,000,000.

D. O. Mills has resigned from the directorate of the Southern Pacific, as well as from the board of the Erie Railroad. W. Bayard Cutting was chosen on Thursday to fill Mr. Mills's place in the Southern Pacific board.

BOSTON CHICAGO BALTIMORE

More than 11,000,000 pieces of baggage were handled by the Pennsylvania Railroad in 1906, according to the annual report of the baggage agent. Putting the official valuation of $100 on each piece, the amount to which the road limits its liability on first-class tickets, something over $1,100,000,000 worth of passengers' belongings passed over the road.

Industrial.

Anthracite coal shipments in March were 5,235,814 tons, as compared with 5,797,167 tons in the corresponding month of last year. The shipments of anthracite coal for three months were 15,049,480 tons, as compared with 15,967,350 tons in the same period of 1906. The total production of anthracite coal in the coal year, from April 1 to March 31, was 54,780,725 tons, against 63,734,506 tons the previous year. Stocks of anthracite coal at tidewater on March 31 were 799,779 tons, as compared with 598,121 tons on hand February 28, an increase of 201,658 tons. Shipments of anthracite by months for four years have been as follows, in tons:

	1907	1906	1905	1904
January	5,249,946	5,458,084	4,408,578	4,134,245
February	4,563,720	4,712,099	3,922,601	4,325,269
March	5,235,814	5,797,167	5,258,567	4,375,033
Total	15,049,480	15,967,350	13,589,746	12,835,547

The production of aluminium in the United States in 1906 was 14,350,000 pounds. It is expected that the output in 1907 will be twice as much, and that the output of 1908 will be double that of 1907. "Aluminium has often been spoken of as a possible competitor of copper, but up to the present time its production has been too small to make it a matter of serious consideration in that respect," says the *Engineering and Mining Journal*. "However, it appears as if conditions may be different by 1908. Few realize that, outside of iron, steel and copper, perhaps no other metal has the possibilities before it that aluminium has."

At a meeting of the German Commercial Union, Tuesday, Count von Posadwosky-Wehner, Minister of the Interior, declared that German commerce was still on the top wave of prosperity. The only things lacking were a sufficiency of native workers and ready money. The minister added that if the prices of the necessaries of life had risen, so had the rate of wages. German workmen were now better off than ever before. There was no evidence to show that industry had suffered from the recently concluded commercial treaties.

According to the *Iron Age*, the production of pig iron in March amounted to 2,225,175 tons, about 10,000 tons less than the high record attained in December, 1906. The daily rate of production was 71,780 tons, as against 73,038 tons in February. Floods in the Pittsburgh and Wheeling districts, and the blowing out of five more furnaces than were blown in, defeated the attempt to get a record output in March. In the first quarter of the year pig-iron production amounted to 6,475,850 tons, the figures comparing, in tons, with those of last year.

	1907	1906
January	2,205,607	2,068,893
February	2,045,068	1,894,032
March	2,225,175	2,165,632
Total	6,475,850	6,128,557

On April 1 the weekly capacity of furnaces in blast was 497,456 tons, which compares with 511,035 tons on March 1 and 492,359 tons on February 1. On April 1 last year the weekly capacity was 484,240 tons, and on April 1, 1905, it was 439,564 tons.

Miscellaneous.

During 1906, 417,573 emigrants departed from Italy, and 132,190 former emigrants returned to the old country. In 1905 the ebb was 350,381, and the inflow 102,889, so that the emigration for 1906 was greater than that for 1905 by about 67,000 persons. The greater number of emigrants went to the United States, the Italian records showing 287,090 persons so departing. A total of 114,818 went to Argentina, 13,143 to Brazil, 1,097 to Central America, 1,148 to points east of Suez, and 277 to other countries. The United States also contributed the largest number of returning fortune seekers, the total for 1906 being 94,445; from Argentina, 24,602; from Brazil, 11,861, and from Central America, 571.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade and manufacturing conditions are in high degree favorable, despite the lull in demand usual at this stage of the spring season. Some odd cross currents are visible because of the scarcity of stocks in so many lines, necessitating buying in other markets to eke out supplies sold ahead some time ago. In retail trade, cold weather and bad country roads are a bar to fullest activity, but the volume of business doing, as a whole, exceeds the corresponding period in other years. One proof of this is found in the liberal gains in gross railway earnings over 1906, 8 per cent. increase being shown for March, 4 per cent. for the first quarter and 7 per cent. for the fiscal year, as compared with the best records of preceding years. Cold weather has likewise offered a check to crop germination, notably in the central west and in the south, where the growth of vegetables and cotton has been retarded. Inasmuch, however, as the season, as a whole, is greatly in advance of a year ago, this check is not regarded seriously. More immediately hurtful, perhaps, are the reports of insect damage in the southwest and of dry weather from Texas north to Nebraska; but impairment from the high degree of condition shown at the beginning of the month in winter wheat is probably not very serious as yet, though wheat prices have begun to respond to the efforts of crop reporters. Seasonal changes are claimed to be largely responsible for the downward swing of staple commodities in March. A favorable feature deserving attention is the renewal of buying of Bessemer pig iron on a very large scale for second-half delivery at prices representing a compromise between buyers and sellers. Specially notable features are the facts that many lines of business in the southwest show increases in outputs and sales over a year ago of 5 to 15 per cent. The situation of money is toward further ease; shipments of currency to the interior are heavy, but collections are still backward, though they are said to have notably improved in the northwest and in the eastern dry-goods trade. The labor situation, despite local disturbances, is very good, and wages in many lines have been advanced. Railway congestion is less acute, and deliveries of grain, coal and other commodities are increasing. Further ease is expected when water navigation opens, and a heavy lake trade is in prospect.

Bank clearings outside of the metropolis, where dullness in speculation in stocks, cereals, cotton and coffee is a feature, still show increases over a year ago. Building records for three months show that operations are active, in that, excluding New York (Manhattan), a gain over a year ago for the first quarter is exhibited. All in all, the situation is superior to any preceding year at this period; a heavy spring, summer and early fall trade is in prospect, and conservatism as to paying present high prices for goods is manifested only as regards the more distant positions.

In the iron and steel trades the preëminent feature of the week is the heavy buying of Bessemer pig iron by steel-making concerns, the tonnage contracted for in the Pittsburgh district aggregating over 260,000 tons, 250,000 tons being for second-half delivery. The bulk of the iron brought $21 the ton at valley furnaces, though some small lots for quite nearby delivery commanded as high as $23. It is understood that the purchasers had been holding off for a quotation of $20 a ton. Business in foundry iron is quiet, but there is some inquiry for the last half of the year. Deliveries from the south are better, and while western markets report firm prices, the east reflects irregularity and a tendency to grant concessions on large contracts. Some additional business has been placed oversea for Middlesbrough and Scotch iron, and the markets abroad are higher, stocks are lower, and demand from America and Germany is a feature. America is said to be a free buyer of cotton ties in the English market. Demand for structural steel, chiefly for railway bridge building, is very heavy. Steel is still scarce in the central west. Sales of steel rails make up a good-sized total, considering the business heretofore done. Chicago traction interests have ordered 20,000 tons, while China and Japan has 7,000 tons, and it is said that some heavy business is pending. Sheet mills are falling farther behind in deliveries. Steel bars are firm, but it is said that bar iron is being shaded in the central west. Merchant pipe, wire nails and tinplate are in heavy demand. Coke is easy, the supply being ample. While the situation as regards copper prices is perplexing, the undertone is probably easier, as consumers appear to be pretty well covered and are therefore not anxious to buy far ahead on the basis of high prices. Most of the copper offered here at concessions is of foreign origin, and copper interests insist that prices on domestic grades are not being cut.

Weather conditions have been against the fullest crop development this week. Dry weather is complained of from Texas north to Nebraska, but dispatches to BRADSTREET'S from Kansas, Nebraska and Missouri are still good. Only half a crop is possible in Texas owing to green-bug damage, and Oklahoma and southern Missouri report damage from the pest. Practically perfect conditions in Kansas two weeks ago have been slightly impaired by want of rain. The bugs are also in evidence in southern Kansas. Farm work is two weeks ahead of last year in the central west. In the northwest seeding is delayed by cold weather. In the Pacific northwest winter wheat is in excellent condition. Cold weather has retarded vegetable growth generally throughout the country. In parts of Texas cotton planting is retarded by cold and dry weather. In Arkansas half the crop is planted, but cold weather retards germination; an increase of 5 per cent. on last year is looked for. In Alabama cold weather has retarded planting, but an area equal to last season is certain. Cold weather has necessitated some replanting of truck in southern Alabama. Damage to fruit and vegetables is reported in Georgia, but cotton was not far enough advanced to be hurt.

Bulls in cotton find the speculative public cold and not inclined to do much. The result is that cotton bulls very hard. Large consumption and smaller receipts are the leading bull cards, but crop news is becoming the factor. Changes on the week are trifling, old crop months being up 10 to 12 points, while new crop is up 15 points and spots are unchanged. Large receipts are a bar to strength in coffee, and futures are 25 points off on the week, with spots shaded ¼ cent. Poor crop reports, bug damage in the southwest, and too dry weather in Kansas and Nebraska were the moving features in wheat prices this week, the good reports from government sources being disregarded in the light of claimed (later) damage reports. The gain in prices is about 2 cents for the week. Flour is rather stronger with better demand. Corn shows strength, with a gain of 1½ cents on good export demand and sympathy with wheat, and oats are strong and higher. Reduced production in Cuba, shutting down of centrals, and smaller receipts have stiffened raw-sugar prices and caused an advance of ⅛ cent, which has been responded to by a gain of 10 points in refined. Steady prices are looked for in the future.

Wool is quiet east and west. Manufacturers are only taking small lots at eastern markets, and eastern buyers in the west are few in number. Shearing has begun in the far west and a few clips have been sold, but prices are thought high by eastern buyers. One lot of South American wool, held over for two years, has just been sold at a profit. Foreign markets are very strong, and this keeps prices firm here on the small lots available.

Something like a lull in demand for cotton goods is being taken advantage of by manufacturers, wholesalers and jobbers to catch up with backward deliveries. Cotton yarns are active, though irregular in price. Narrow print cloths are higher. Export cottons are quiet. Silk goods are very active and raw silk is strong. In dress goods, business is satisfactory, though some concessions are claimed to be obtainable for late fall delivery. Millinery is active, and knit-goods manufacturers have all the business they can handle for late fall and winter. Men's-wear woolens sell well, and finishers and converters report deliveries backward. Paper men are active and complain of slow deliveries.

There has been more doing in some lines of leather. Some large manufacturers of leather have come in and bought 750,000 sides of hemlock leather at close to full market prices, thus covering their fall manufacturing season. Hides are soft in price and tanners are buying only for immediate wants. While some shoe manufacturers have evidently gotten good orders, others are behind, and wholesalers and jobbers incline to hold off on large fall business. Spring orders, as a whole, have not been up to expectations. Shipments for the year are 4.6 per cent. behind at the eastern factories, but leading western markets report 10 to 15 per cent. increase on last year.

The New York stock market is dull, narrow and professional. The tendency on the part of traders has been to attack prices. Public interest is lacking, and the only support comes from occasional covering by shorts. Bonds have been comparatively firm, with a better demand, due to easier money conditions. Foreign exchange is higher on continued buying of bills to retire foreign loans. Demand sterling is 4.85.70.

Bank clearings for the week ending April 11 aggregate $3,053,450,000, a fraction under last week and 4 per cent. below this week last year. Outside of New York exchanges amount to $1,130,269,000, 1 per cent. above last week and 6.8 per cent. over the corresponding week last year.

Business failures for the week ending April 11 number 194, against 137 last week, 161 in the like week of 1906, 196 in 1905, 198 in 1904 and 160 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending April 11 aggregated 1,831,105 bushels, against 3,460,872 bushels last week, 2,362,347 bushels this week last year, 1,292,301 bushels in 1905 and 3,842,012 bushels in 1902. For the past forty-one weeks of the fiscal year the exports are 135,883,022 bushels, against 107,506,919 bushels in 1905-06, 49,810,627 bushels in 1904-05 and 203,951,181 bushels in 1901-02. Corn exports for the week are 1,475,719 bushels, against 2,917,004 bushels last week, 1,725,799 bushels a year ago and 2,299,767 bushels in 1905. For the fiscal year to date the exports are 56,059,579 bushels, against 99,699,135 bushels in 1905-06 and 63,044,950 bushels in 1904-05.

IN CANADA.

Bad roads limit country trade, and collections are still slow from the west, but a great impetus is expected to all lines when navigation opens. There is a large quantity of grain to move in the northwest; heavy-machinery men, car factories and railway-material men report an immense volume of business booked, and immigration is already very heavy. At Montreal navigation will open a week or two later than last year. Wholesalers are behind on shipments because manufacturers are backward in deliveries. Reorders are good. At Toronto hat jobbers are talking of advancing prices, hardware shipments are large, but poor roads affect provincial trade. At Winnipeg retail trade is good, and a heavy trade is expected throughout the northwest. Money is firm and collections slow, owing largely to the congestion in grain shipments. Business is active on the Pacific coast, shipping is active, and flour is in demand from the Orient. Failures for the week number 28, as against 29 last week and 15 in this week a year ago. Clearings at eleven cities for the week aggregate $80,975,000, a gain of 26 per cent. over last week and of 16 per cent. over this week a year ago.

THE CROPS.

CHICAGO.—Reports from Texas represent the yield as promising only 50 per cent. of a wheat crop. In Oklahoma winter wheat is damaged 25 per cent. and oats 50 per cent. Kansas wheat estimates, which were perfect ten days ago, have been reduced 5 and possibly 10 per cent. It is a weather proposition, and every day of drought reduces the prospective yield. Missouri is damaged 5 per cent.; this has been caused by green bugs. Slight damage has occurred to wheat in the central states. The government report for April suggests 484,000,000 bushels, as compared with 493,000,000 bushels harvested last year. Prospects are that 1,600,000 acres will have to be abandoned because of bugs, drought and winter-killing. Oats are nearly all planted; cold weather may necessitate resowing. Plowing for corn is progressing in the central regions. Farm work generally is one to two weeks ahead of last year. Seeding in the northwest has been delayed by cold weather.

ST. JOSEPH.—Wheat conditions continue favorable. Rain would benefit western Kansas, but the need of it is not yet urgent.

ST. LOUIS.—While there are many rumors as to the damage wrought the growing winter-wheat crop by the green bug, the condition is not so serious as indicated by some of the grain dealers. The oats crop in this section is in good condition and farmers are already busy planting corn.

OMAHA.—Winter wheat is in splendid condition, and the acreage is somewhat larger than last year. The acreage of oats is large, and much barley is being sown.

KANSAS CITY.—Growing wheat has made splendid headway.

WICHITA.—Green bugs are appearing in southern Kansas, but no damage has occurred as yet.

ST. PAUL.—Unfavorable weather conditions have so far prevented any attempt to commence seeding, although preparations to that end are being made.

SIOUX FALLS.—The weather is favorable for farm operations, and seeding is practically finished, except on the lowlands, where it is too wet to work at present. Prospects were never better.

TERRE HAUTE.—Vegetation in this section has been materially affected by the prolonged cold wave.

SIOUX CITY.—Seeding is in full swing, but the weather is still cold.

DAVENPORT.—Spring plowing is well advanced, and the cold weather has not done any particular damage, only in retarding growth of garden truck.

INDIANAPOLIS.—Crop conditions generally are fair. Recent cold weather is not believed to have caused any damage.

CINCINNATI.—Unseasonable temperatures and snow have not materially hindered farming operations nor, except in a few localities, injured growing wheat. Oats sowing is nearly com-

pleted. Information obtainable about amount of damage done to wheat is thought to be overestimated.

NEW ORLEANS.—General crop conditions are favorable, except that rain is needed in some sections. A large acreage of staple crops is assured in this territory, and the weather has seldom been better, only more moisture would improve conditions.

LITTLE ROCK.—Cold weather, with rain and some frost, has checked vegetation, which, owing to previous hot weather, was far advanced. Where cotton is above ground cut worms are causing serious damage to the plant. It is estimated that the acreage in Arkansas will be 2,000,000, a 5 per cent. increase over last season. Planting has advanced steadily and the crop is about half in.

RICHMOND. — Continued unseasonably cold weather has retarded the planting of early spring crops, and in some sections fruit and early vegetables have been injured.

CHARLESTON. —Cold weather has not done any great damage to truck. Heavy shipments of cabbage are being made and bring from $3 to $3.50 per crate.

MONTGOMERY.—Cold weather has retarded the planting of cotton to some extent. However, a large acreage has already been planted, and it is believed that the acreage will equal that of last season.

MOBILE.—Steady progress is being made in the farming districts in planting cotton and corn. Truck gardeners have been compelled to replant many vegetables owing to the cool spell of last week.

ATLANTA.—Changeable weather has damaged fruit and vegetables. Cotton in this section has not advanced far enough to be damaged.

AUGUSTA.—Fruit is thought to be uninjured by cold weather, and crops are growing nicely.

FORT WORTH.—Dry weather is the most serious complaint at present. Corn is looking well and cotton is about all planted. Wheat and oats are practically destroyed.

DALLAS.—A considerable portion of the cotton crop is yet unplanted, and rain is very badly needed in some sections.

PORTLAND, ORE.—Winter-sown wheat is in excellent condition, but weather conditions delay spring sowing.

SPOKANE.—Reports as to winter wheat continue favorable. The outlook for fruit is promising.

TRADE REPORTS.

At New York good business still prevails in the dry-goods trade. Cotton goods continue in the lead; sales are larger in every line, and prices continue firm and are advancing in some makes. Silks are also in good request, and trade is steadily improving. In dress goods business is satisfactory; worsteds for men's-wear have fair attention, and collections are reported good. Yarns continue active and high in price. Scarcity of the manufactured article is still apparent in some lines, and manufacturers find difficulty in obtaining the necessary supply of raw material, although they have placed orders far in advance. Raw silk is in demand, especially for future delivery, and prices are firm. The cloak and suit trades continue active, and collections are good. In the millinery trade ostrich and fancy feathers and flowers sell well, and business is fairly prosperous. Manufacturers of shirts, gloves and neckwear report an active trade, with large orders, and jobbers of hosiery and knit goods have all the business to which they can attend. Mill demand for rags and shoddy is very limited. Wholesale grocers report sales fully up to those of this week last year with a better margin of profit. Retail business is satisfactory. Confectionery is less active, but not unusually so, and collections are fair. Flour is being purchased by wholesalers only as needed. Demand for butter about equals the supply. Exports of poultry for the week were valued at $10,000. Eggs dropped a cent, receipts are very large, and quantities are going into storage. Cotton cordage is scarce, and a premium is being paid for prompt delivery. Conditions in the gas-fixture trade are not entirely satisfactory. While manufacturers of the higher grade of goods are doing a satisfactory business there is thought to be overproduction in the cheaper lines; there is some cutting of prices and reported losses through dealings with speculative dealers who found themselves unable to complete their contracts owing to the scarcity of money. There is irregularity, and even some weakness in metals, but pig iron and scrap material have not changed to any appreciable extent, though the tone of the market favors buyers. Machinery manufacturers and dealers are well supplied with orders, and electrical houses report a fair business but poor collections. Conditions in the furniture trade show no improvement, and collections continue slow. Manufacturers of and jobbers in jewelry report business good and prospects excellent. Small diamonds are scarce and in demand. In lumber and building materials the volume of local business is somewhat restricted. Satisfactory conditions exist in the paper trade. Stocks are not accumulating and prices are firm.

The following telegrams show trade conditions at the cities mentioned for the week ending April 12:

BOSTON.—Jobbing dry-goods business is less active and strong than in March. Retail trade this week has been retarded by cold and stormy weather, sales of some leading dealers falling off about 50 per cent. Jobbing houses are hampered in the receipt and delivery of goods by a strike among teamsters, and manufacturers of cloaks, suits and skirts are held up by the continuing strike of operators. Cotton goods continue very strong, demand being greater than the supply, and prices in some lines are being marked up. Generally in the dry-goods trade there is a feeling of great confidence as to business during the present spring and coming summer and fall, but there is a growing disposition to prepare later for a slowing down in operations and for carrying smaller stocks bought at the prevailing high values. Clothing manufacturers have done a large volume of business in spring and summer wear. Hosiery and underwear in many lines have been scarce and in strong demand. Business in men's furnishings at wholesale is heavy, and some dealers increased sales in March about 20 to 25 per cent. over a year ago. Several of the large shoe manufacturers have bought their season's supply of hemlock sole leather, and sales of between 750,000 and 1,000,000 sides are reported at close to full market quotations. As a whole the leather and shoe trades are still quiet. Wholesalers are late in placing contracts for fall footwear, and supplementary spring orders have been disappointing. Shipments this week exceed those of same week last year by over 4,000 cases. Both manufacturers and jobbers report an active business in paper. The demand is general, and all kinds of paper are moving well. The market is very firm, and as manufactured stocks are well in hand and raw materials are costing high there is talk of some further advances in quotations. The furniture trade is moderately active, and collections are improving somewhat. Jobbers of electrical goods are fairly busy, but collections continue slow. Piano manufacturers are doing a good volume of business, and the trade generally appears to be in a healthy condition. In building materials some set-back is noticed on account of recent severe weather, but indications point to a brisk business ahead. In the lumber market prices remain steady, some lines being in more active demand. In coal, arrivals from the south have been hindered by the severe weather, but stocks are in fair supply. Metals of all kinds are active, and in iron and steel trade advance orders are reported in good numbers. Wholesale liquor dealers report a fair demand for all grades of liquor. Rectified whiskey has the call. Wines, beers and ales are moving rather slow. Collections are only fair. The leaf-tobacco market continues steady, with good demand. Collections are easy. Manufacturing confectioners are busy and report favorable conditions. Grocery jobbers report an average business, with a tendency to slowness in payments. Eggs are lower, and considerable quantities are now being placed in cold storage.

PROVIDENCE.—The jewelry business continues quiet. There is little change in cotton goods, demand being firm. The machinery and tool trade holds firm. Chemicals and dyestuffs are in good demand. Collections are fair.

PORTLAND, ME.—Climatic conditions are more favorable to retail trade in shoes, millinery, clothing and dry goods in the larger towns, but country roads are still very unsettled and business in those sections is quiet. Wholesalers report an average business. Manufacturers generally throughout the state are busy, particularly in cottons, woolens, shoes and paper. Summer resorts are making preparations for business.

PHILADELPHIA. — Wool is seasonably dull, stocks are low and prices firm. Manufacturers as a rule are busy, but owing to difficulty in getting skilled labor all machinery is not being operated. Dry-goods jobbers report a fair trade, but little or no improvement in collections. Flour is in fair demand, and prices are somewhat firmer in sympathy with wheat. Chemicals and dyestuffs are fairly active. Paints and glass are beginning to move freely, and the market is strong. Lumbermen report an active demand at high prices. The only drawback seems to be a lack of transportation facilities. Hides and skins continue firm, with fair demand, good supply and slight decline in prices. Goatskins are firm, with quiet demand, full supply and slightly lower prices. Leather continues firm, with less demand, but at high prices. Wholesale and retail shoe dealers report fair volume of business. Tobacco sales are much improved, but the amounts in each case are small. Money is easier and collections improved. Liquor dealers anticipated the final decision just handed out as to blends of whiskey under the pure-food law, and that has ceased to be a factor. Sales are small.

PITTSBURGH.—The pig-iron market was more active during the past week, and sales of Bessemer iron were made as follows: 150,000 tons for second-half delivery at $21; 100,000 tons for second-half delivery, part of same at $21 and the balance at average market prices; 1,500 tons for May and June delivery at $23; 10,000 tons for June delivery at $22 and 2,000 tons for April, May, June and July delivery at $22.50. The prices named are at the valley furnaces, and the large sales noted for the second half of the year absorb the greater portion of the valley production for the period named. Production of finished products continues up to full mill capacity. Structural steel occupies a leading position, specifications coming in freely, with bookings offering for which delivery will extend into the fourth quarter of the year. Coke continues in full supply, and prices are unchanged. Valley furnace quotations for pig iron for spot delivery are as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.75. Standard Connellsville furnace coke is quoted at $2.80 and foundry coke at $3.80.

BUFFALO.—Trade is very satisfactory. Building operations are brisk. Sales and receipts in the live-stock market appear to be normal for this season of the year, and prices remain firm. Indications point to an average volume of business for spring and summer, and the general feeling is one of confidence. Collections are reported fair.

BALTIMORE. — Unseasonable weather curtails retail trade. Jobbers of dry goods report business quite satisfactory, and collections have improved. Many lines continue very scarce. Ginghams are advancing and the supply is short. Sales for April show an increase in amount but not in volume. Improved condition is also noted in notions, with better collections, and slow deliveries continue. Hardware prices are still firm, but collections are slow. Sales of groceries are fair. Business in paper holds up well. Mill deliveries are somewhat easier, but prices continue very firm; collections are fair. Tobacco continues firm, with receipts rather light and collections fair. Manufacturers of harness have sufficient orders to keep them well employed, but collections are backward. Woodenware jobbers report trade well up to last year's, but factory deliveries are still backward and collections are only fair. Leather prices are maintained, with a great scarcity of scoured oak back for soles. Belting leather is in good demand, with no accumulation in stocks. In shoes a fair business has been done, with the nearby trade now on, but general business is quiet, due to weather conditions. Slow collections are complained of in machinery lines, prices are away up, and buying is mostly done for immediate wants only. Money continues active, with the supply fully taken. In clothing, business is quiet, awaiting the receipt of orders from salesmen who recently started out.

CINCINNATI. — General business continues to improve, and the supply of money is increasing.

CHICAGO.—Trade conditions hold remarkably well. The steel trade retains its prosperity, and increased orders are being booked. The American Bridge Company has secured orders for 125,000 tons structural material, the largest in its history. Inquiries are also out for 50,000 tons more. The Illinois Steel Company has specification orders on its books for 495,000 tons and total orders for 1,250,000 tons for all products of finished steel. Four to six months is the best delivery securable here. Orders for 15,000 tons cast-iron pipe have been closed. Traction companies bought 20,000 tons steel rails. Sales of pig iron locally are light, sales being in carload lots, but quotations hold strong, and prices on No. 2 northern foundry have been withdrawn. Values are generally firm, but there is easiness in prices for iron and steel bars. Wire products meet with heavy sale, and mills are behind. Prices on wire cloth are up 5 cents. Coke is being actively contracted for. Coal is selling moderately. Lumber trade is good, with firmness to values, and yellow pine is higher. Sales of dry goods are large, but are less than a month ago. Groceries and paints have good sale. The car situation is somewhat improved, as the railroads are constantly receiving new equipment. The produce trade is fair, with prices stronger. Locomotive engineers have secured a raise of 15 to 20 per cent. in wages. Cattle and sheep are higher, but hogs are lower, and lambs sold at the highest price on record. Receipts increased fairly. Lake navigation has opened, and a record tonnage is predicted for the season. It is estimated that the movement of iron ore for the season will reach 45,000 000 tons. Collections are fair. Shipments of currency to the interior largely exceed last year's.

PEORIA.—Jobbers report satisfactory sales, but cool weather has caused a decided falling off in most retail trade. Collections are fair.

INDIANAPOLIS.—Reports from the boot and shoe trade show a healthy condition. Collections are fair. In the lumber trade the demand for manufacturing purposes exceeds that of the same time last year, the demand for building material being about normal. Prices have advanced on account of lack of cars for shipping, which, unless improved, will cause some inconvenience.

TERRE HAUTE.—Wholesale trade and collections are fair. Oil developments do not appear as encouraging as formerly.

ST. LOUIS.—Some complaints are heard from manufacturers and jobbers of merchandise on account of dull business, which they attribute to the unseasonable weather during the past week. The general feeling, however, has not changed, for there is an unusual demand for merchandise. Manufacturers of and dealers in shoes report an increased business over last year, the gain averaging from 10 to 15 per cent., while dealers in dry goods, clothing, hats and kindred lines report an increase of from 5 to 10 per cent. The increase will also apply to hardware and drugs. Building material continues active, and there seems to be no lack of demand in that line. The banks are feeling easier over the money situation, and the general opinion is expressed that conditions will continue to improve. Collections are a little above the average for this season of the year, and shoe houses, whose bills fall due April 1, report unusually good payments.

KANSAS CITY.—Jobbers in all leading lines report business as being very satisfactory for the season. Trade in dry goods and kindred lines continue in excess of a year ago. Retail trade is good.

WICHITA.—Business, wholesale and retail, is good, but collections continue backward.

MILWAUKEE. — Industrial and jobbing lines report good trade. Retail business is somewhat slack on account of unseasonable weather. Collections are slow.

SIOUX CITY.—Business in all lines continues active.

DAVENPORT.—Retail trade is very quiet, due to cold and rainy weather. Wholesale trade is good, and manufacturers are all busy. The river is unusually high for this time of year. A good demand for money continues. Collections are fair.

ST. PAUL.—Trade conditions continue favorable in all lines, hardware, harness and shoes being particularly good. Business in other branches is good for the season. Sales in general exceed those of last year. Collections are coming in fairly well, being mostly in the form of discounts. More money has been received to date than last year, but the volume of business outstanding is much larger. Weekly snowstorms in North Dakota still impede business, travel and the mails, but preparations for the opening up of business are being made. Several orders for harness are being shipped by express.

MINNEAPOLIS. — Jobbers in nearly all lines report an excellent volume of business for the season, with sales exceeding those of last year.

Some improvement is also noted in collections. Domestic flour sales are of only fair volume and export trade is quiet. Lumber is quieter than usual at this season, though many sizes are scarce.

OMAHA.—General trade is good and prospects appear very favorable. Collections are only fair.

LINCOLN.—Jobbers generally report fair business. Collections are fair.

SIOUX FALLS.—Trade is good and collections are fair.

CHARLESTON.—Wholesale dealers in dry goods, boots, shoes and notions are receiving a fair quantity of orders far fall shipment. Collections are slow.

RICHMOND.—Fertilizer manufacturers throughout Virginia and eastern North Carolina have had a successful season; their output has been fully as great as the best of recent years. Wholesale dealers in dry goods and notions have about completed spring shipments; they have had a successful season, and prospects for filling-in orders are good. In this line collections show improvement. Small amounts of loose tobacco are still being marketed and prices continue satisfactory, there being no abatement in demand. Collections generally are backward, but fewer requests for extensions are received.

SAVANNAH —Cool weather still prevails, which retards retail trade. Collections are improving.

ATLANTA.—Trade is only fair as compared with last year's.

BIRMINGHAM.—Southern foundry No. 2 pig iron is strong at $23 per ton. Owing to the sudden fall in temperature, trade is not quite so good. Collections are good.

MONTGOMERY. — Jobbers report trade very quiet. Some little improvement in retail lines is noted. Collections are very slow.

MOBILE.—Good weather prevails, and both retailers and jobbers report satisfactory sales, with collections fairly good. The outlook for the lumber interests appears to be good. There is an upward tendency in the price of naval stores. Several ships arrived from the tropics with full cargoes of bananas.

CHATTANOOGA.—All lines of trade show great activity. Collections are about the average.

KNOXVILLE. — Unseasonable weather retards retail trade. Jobbers, however, report business good, sales in some lines being larger than for the same period of last year. Seasonable dry goods are active, and salesmen recently entering the field with fall clothing are said to be receiving larger contracts than last season, which, supplemented by fair filling-in orders for spring goods, imparts briskness in that line. Late and comparatively large real estate transactions, on an investment basis, indicates confidence, and inquiry for lumber and builders' supplies forecasts activity in building and construction work during the spring and early summer.

MEMPHIS.—Cold weather retards retail trade. Wholesale business is fair. Collections are slow. The car shortage is still delaying the movement of cotton, lumber and other merchandise.
